REPORT FOR JANUARY, 1900.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF  
WILLIS L. MOORE,  
CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,  
SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JANUARY 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,  
**CLIMATE AND CROP SERVICE**  
 OF THE  
**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.  
 J. W. BAUER, Section Director,  
 COLUMBIA, S. C.

VOL. III. COLUMBIA, S. C., JANUARY, 1900. No. 1.

**CLIMATOLOGY FOR THE MONTH.**

**Temperature, in Degrees Fahrenheit.**

The mean temperature for the month of January, 1900, was 44.0°, which is 0.6° below the normal. The highest local mean was 51.0° at Beaufort, and the lowest local mean was 39.0° at Liberty. The highest temperature for the month was 75° at Beaufort on the 8th and 23d; the lowest temperature for the month was 3° at Liberty on the 2d, making the State range 72°. The greatest local range was 65° at Liberty, and the least local range was 46° at Charleston. The mean of the daily maximum temperatures was 54.6°, and of the daily minimum temperatures 33.5°.

**Precipitation, in Inches.**

The average precipitation for the State was 2.43 inches, which is 1.61 inches below the normal. The total precipitation amounted to from two to three inches over the western counties and over the eastern counties, while over the central counties it amounted to from one and one-half to two inches. The deficiency, or departure from the normal, was greatest over the western and central counties. Along the immediate coast, from upper Charleston county to the North Carolina boundary, the rainfall was in excess of four inches. The greatest local amount for the month was 5.65 inches at Georgetown; the least local amount was 1.58 inches at Statesburg. The greatest 24-hourly fall was 2.00 at Georgetown on the 11th. The average number of days with rain was 8, ranging from 13 at St. Stephens to 5 at Clemson College, Greenville, Liberty, Shaw's Fork, and Winnsboro.

**Snow.**—Snow fell on 4 days during January, 1900, as follows: early on the morning of the 1st, which was the ending of the snow storm that began on December 31, 1899; again on the 27th, 28th, and on the 30th. The snow storm of the 28th was the most general, but did not quite reach the extreme western portions of the State; it was heaviest in the eastern range of counties, where in places (Smiths Mills and Temperance) four to five inches fell. The snow storm of the 30th was generally confined to the eastern counties; heaviest in the northeastern portion of the State. The average depth of snow for the month was 2.5 inches, ranging from a mini-

mum depth of a mere trace to a maximum depth of 9.0 inches at Smiths Mills.

**Sleet.**—Light sleet occurred at a few points in the southeastern counties on the 28th and 31st.

**WEATHER AND CROPS.**

The month of January, 1900, began and ended with unusually cold weather, although no records of temperature extremes were broken. The intermediate period was warmer than usual, but not warm enough to unduly stimulate the growth of vegetation, or to cause the buds of fruit trees to swell.

During the first of the month, the ground was frozen to a depth of from 4 to 6 inches over the western and central counties, and was again frozen to a lesser depth on the last two days of the month.

The rainfall was generally below the normal except at a few points. There was a period of general rain from the 9th to the 12th; another from the 17th to the 20th, and scattered showers from the 25th to the close of the month.

The ground was in excellent condition to absorb the greater portion of the rainfall, thus lessening the ill effects of the deficiency. Precipitation occurred in some portion of the State on 19 days.

Wheat and oats were not materially injured by the freezing weather at the opening of the month, and if injured by the freeze at the close of the month, the damage was not apparent. Plowing was quite general during the month, in preparation for spring planting.

**MISCELLANEOUS PHENOMENA (with dates).**

**Weather.**—There was an average of 16 clear, 6 partly cloudy, and 9 cloudy days for January.

**Winds.**—The prevailing direction of the wind was from the west and northwest at 9 stations each, from the north and northeast at 8 stations each, from the southwest at 5 stations, and from the east and south at 2 stations each.

**High Winds.**—Beaufort, 12, 20, 31; Charleston, 11; Gillisonville, Longshore, Shaw's Fork, Winthrop College, 31; Holland, 29, 30, 31; Walhalla, 20, 25, 26, 29, 30, 31.

**Parhelion.**—Santuc, 30.

**Earthquake.**—Summerville, 14.

**Solar Halos.**—Charleston, 4, 17, 22, 25, 26; Santuc, 5, 22; Winthrop College (colored halo), 26.

**Lunar Halos.**—Blackville, 4, 5, 6, 16; Charleston, 5, 6, 16, 17, 25; Columbia, 16; Little Mountain, Santuc, 6; Shaw's Fork, 5, 6, 15; Statesburg, 5, 6, 16, 17; Walhalla, Winthrop College, 16.

**Thunderstorms.**—Beaufort, 17; Blackville, Clemson College, Liberty, Santuc, Shaw's Fork, Winthrop College, 11; Longshore, 10, 11; Spartanburg, 12; Summerville, 16, 17; Walhalla, 10.

**Dense Fog.**—Beaufort, 10, 11, 19; Blackville, 10, 11, 17, 19, 25; Camden, 8, 25; Charleston, 10, 11, 18, 19, 23, 24; Cheraw,

Columbia, St. Stephens, 19; Clemson College, Winthrop College, 10; Conway, 10, 19, 25; Gillisonville, 10, 16, 17, 19, 22, 23, 25, 26; Liberty, 20; Statesburg, 10, 11, 19, 25; Walhalla, 9, 10, 19.

#### REMARKS BY OBSERVERS.

Batesburg.—January has been a pleasant month. Farmers have begun to prepare their lands. Small grain is looking well.—E. J. Hite.

Trenton.—Light snows on the 1st, 27th, and 28th but melted as it fell. Precipitation 1.93 less than the 7-year average for January. Last of the month cold and windy. To what extent oats were damaged is not known.—C. A. Long.

Santuc.—The month was generally very favorable for outdoor work, but farmers did practically no plowing. The freeze during the first week, killed many oats, especially the youngest planted. Stock suffered but little from the cold, and so far has wintered well.—E. W. Jeter.

Longshore.—Thunder clouds on the nights of the 10th and 11th. On the 14th there was a bright meteor early in the evening, in the northwest. Fifteenth: At 3 a. m. my room was lighted up as if by an electric light, followed by a roaring sound coming from the west and moving towards the north-northeast. Suppose it was a meteor.—W. G. Peterson.

Gillisonville.—January began and closed with very severe weather. From the 1st to the 5th the ground was frozen to a depth of 3 inches. From the 6th to the 26th, the weather was very pleasant. Flurries of snow and sleet during the afternoon of the 27th. Snow and rain during the early morning of the 31st. Farm work was commenced. Lands were cleaned and plowing begun. Oats stood the severe weather of the early portion of the month very well.—Sam. P. Saltus.

#### PORTO RICO.

Soon after the United States took possession of Porto Rico the Weather Bureau established a regular observing station at San Juan, and organized a Climate and Crop Service similar to those in the different sections in this country, with weekly climate and crop bulletins, and a monthly report of the observations of voluntary observers. There were 34 voluntary observing stations in operation at the close of the year 1899. An inspection of the names of the voluntary observers would indicate that 20 of them were natives of the island, by their Spanish origin, 4 doubtful, and the remainder Americans.

A comparison, taken from the July and December data of monthly reports, is interesting. It shows the mean temperature for July to have been 79.3°, and for December it was 73.9°, a difference of only 5.4°. Compare this with like data for the same months in South Carolina, where we find the

July mean temperature 80.0°, and for December 44.6°, difference 35.4°, and we can see how little variation of temperature the changes of season bring to favored Porto Rico.

The highest and lowest temperatures, for July, in Porto Rico were 95° and 58°, respectively, and for December 94° and 46°. In South Carolina the highest July temperature was 105°, or 10° hotter than Porto Rico, and the lowest was 47°, or 11° lower than in Porto Rico. The December comparison is equally striking, for South Carolina had a maximum of 78° and a minimum of 11°. In Porto Rico the minimum did not fall below the active growing point for ordinary vegetation, even on the coldest day. The highest station, nearly 2,000 feet above sea-level, had a minimum of 49°.

It will be seen that the growing season never ends on the island, but there are nevertheless serious problems in agriculture there as elsewhere, for the rainfall is a variable factor, and droughts prevail when the need of rain is manifest, and at other times excessive rains are damaging to some one or other of the many crops cultivated, while the visitation of a hurricane, such as occurred on August 8, 1899, destroys the fruits of a seasons's labor—or of years—in a few terrible hours.

#### NOTES AND COMMENTS

The present weekly European consumption of cotton is 160,000 bales of 500 pounds each, which is at the same rate as during the year 1899. The estimated supply from the East Indies for the year ending September 30, 1900, is 500,000 bales, from Egypt 780,000 bales, sundries 200,000, and from America 5,925,000 bales.

#### ANCESTRY SEEDS.

In order to properly appreciate the value of seed, its pedigree must be known. But seed of ancestry, that has a long-established character for certain qualities, in a given locality, may prove of little value under widely different circumstances, or, if its products be cultivated under new conditions, it may lose its characteristics more or less, and develop into other varieties. It is well known that various perennial plants of tropical climates, like the castor bean, become annuals in northern latitudes, and it may easily happen that the seed of some prized variety which is of unquestioned pedigree, as far as the remote lines of its descent can indicate, is of little worth in soils or climates to which it is unaccustomed, from not having the power to transmit the specially valuable qualities of its progenitors. In high, northern latitudes, the summer cereals ripen after a short period of rapid growth, but seed of such grain, sown in the soil of temperate regions, does not produce early varieties; its rate of growth, after a few years at most, is governed by the climate to which it is exposed. In considering the pedigree of seed, therefore, it is not merely the repute or characters of the ancestry, but the probability that the ancestral excellencies reside in and will be transmitted by the seed, that constitutes the practical point.—*How Crop Grow.*

REPORT FOR FEBRUARY, 1900.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

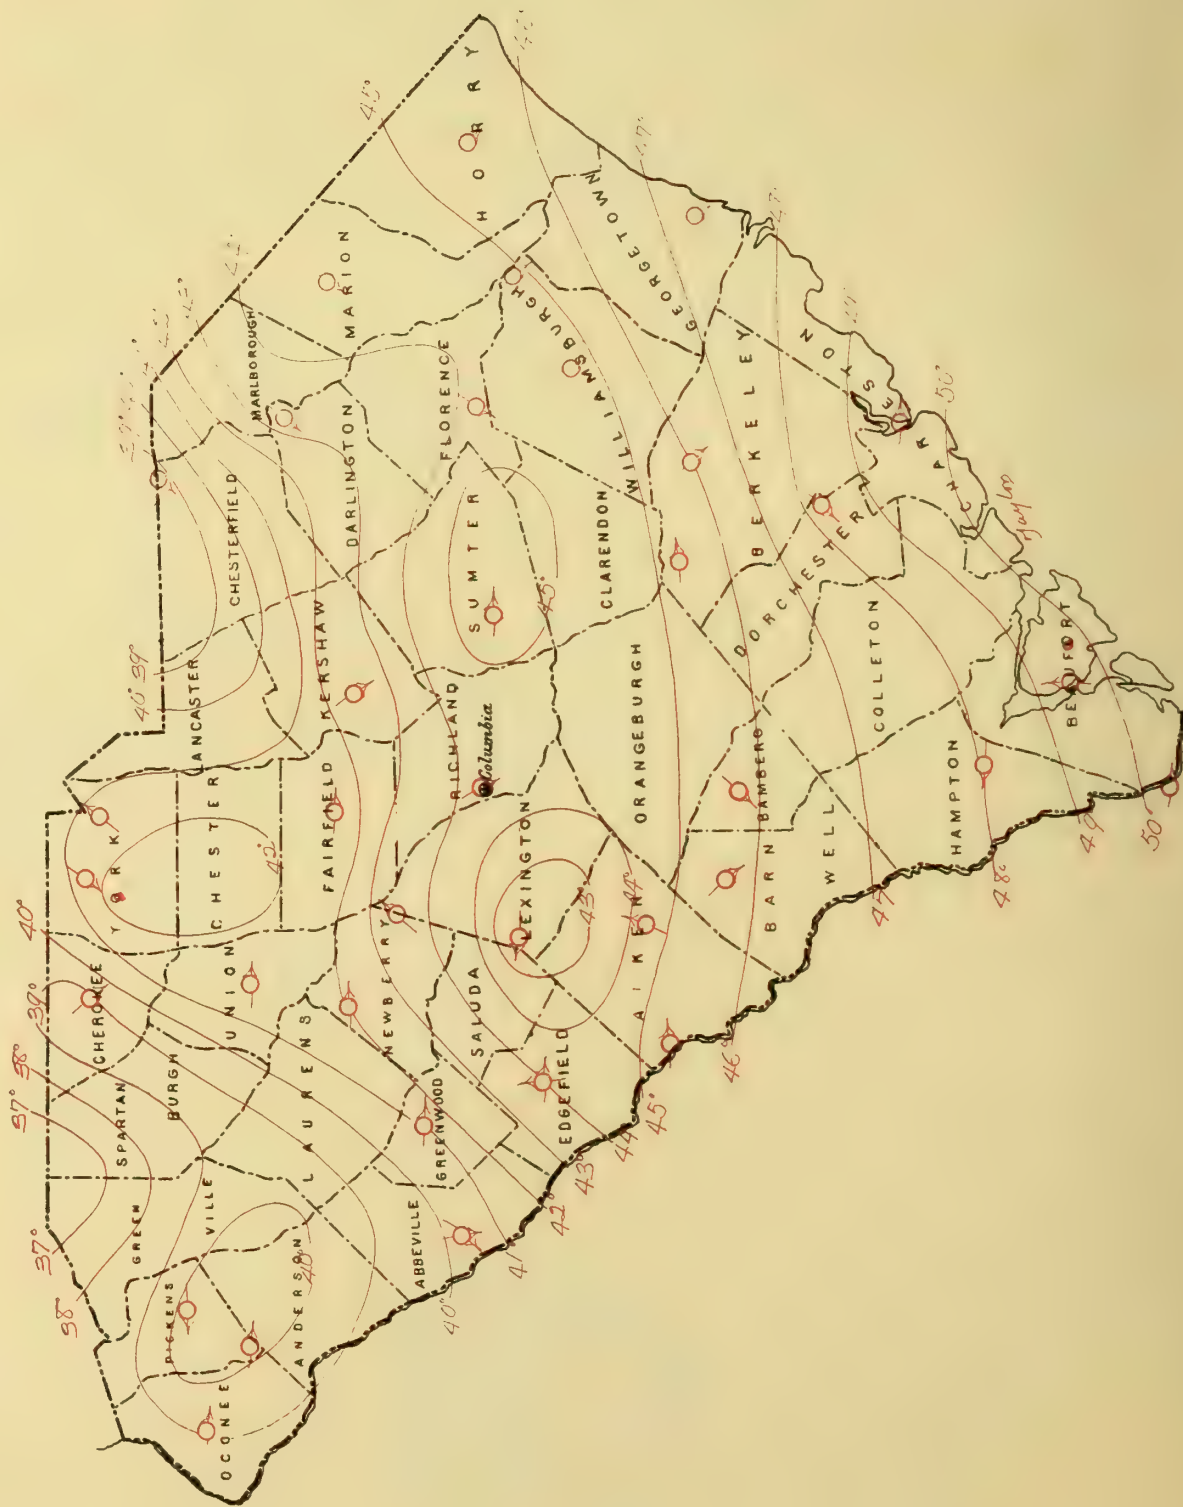

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR FEBRUARY 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. III. COLUMBIA, S. C., FEBRUARY, 1900. No. 2.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for the month of February, 1900, was 44.0°, which is 2.3° below the normal. The highest local mean was 49.6° at Beaufort, and the lowest local mean was 37.4° at Greenville. The highest temperature for the month was 78° at Georgetown on the 8th, and the lowest temperature for the month was 1° at Liberty on the 1st, making the State range 77°. The greatest local range was 68° at Liberty, and the least local range was 53° at Cheraw. The mean of the daily maximum temperatures was 53.9°, and of the daily minimum temperatures 34.0°.

## Precipitation, in Inches.

The average February, 1900, precipitation for the State was 5.77 inches, which is 1.37 inches above the normal. The precipitation was heaviest in the western portions of the State, where it was, in places, double the usual amount, and it was least in the southeastern portion where, in places, it was about half the usual amount. The greatest local amount for the month was 10.61 inches at Holland, and the least local amount was 1.86 inches at Yemassee. The greatest 24-hourly fall was 2.83 inches at Trenton on the 10-11th. The average number of days with rain was 10, ranging from 14 at Greenville, Santuc, and Winthrop College to 6 at Georgetown.

Snow—The snowfall for the month was generally light, and occurred on the 17th, except that a few places had flurries of snow on other dates. The snowstorm of the 17th covered practically the entire State, but the snowfall was light except at Greenville and Spartanburg, from which points depths of 2 inches were reported, while at other points in the western portions of the State the depth ranged from an inch and a half downward to a mere trace. The snow melted quickly, and afforded no protection to the grain crops. The average depth of snowfall for the month was 0.4 of an inch, ranging from "T" to 2 inches.

Hail.—Hail was noted at Greenville on the 4th, and at Batesburg, Liberty, Little Mountain, Longshore, Society Hill, Statesburg, Trenton, and Winthrop College on the 21st.

Sleet.—Sleet occurred at Holland and Santuc, 28; Liberty,

10, 28; Longshore and Winthrop College, 10; Spartanburg, 17, 28.

## MISCELLANEOUS PHENOMENA (with dates).

Weather.—There was an average of 9 clear, 7 partly cloudy, and 12 cloudy days in February.

Winds.—The prevailing direction of the wind was from the west at 14 stations, from the northwest and northeast at 10 stations each, from the southwest at 4 stations, from the east at 3 stations, and from the south at 2 stations.

Solar Halos.—Beaufort, 20; Charleston, 4, 5, 12, 15, 16, 20, 21, 23; Santuc, 14; Statesburg, 20.

Lunar Halos.—Blackville, 4, 6, 15; Charleston, 4, 12, 13, 15, 16; Gillisonville, 9, 12; Santuc, 6; Statesburg, 6, 7; Winthrop College, 4, 26.

High Winds.—Beaufort, 17, 21, 24, 25, 27, 28; Blackville, 4, 17, 21, 24; Charleston, 4; Columbia, 17, 24; Gillisonville, 17, 28; Holland, 24, 25; Little Mountain, 13; Longshore, 12, 22, 24, 25; Shaw's Fork, 22, 24, 25; Summerville, 24, 25, 28; Temperance, 24; Walhalla, 24, 25, 26, 27.

Thunderstorms.—Batesburg, Blackville, Clemson College, Statesburg, and Winthrop College on the 21st; Beaufort and Gillisonville, 9, 21; Charleston, 9, 13, 21; Columbia and Society Hill, 11, 21; Gaffney, Santuc, and Yorkville, 21, 24; Liberty, 24; Little Mountain and Trenton, 11, 21, 24; Longshore, 8, 11, 21; Shaw's Fork, 11, 12, 21; Walhalla, 8, 21.

Fogs, dense.—Beaufort, Columbia, and Santuc, 8, 12; Blackville, 8, 12, 16; Camden, Cheraw, Conway, Edisto, Effingham, Greenville, Kingstree, Little Mountain, St. Stephens, and Yorkville, 8; Charleston, 7, 8, 9, 10, 12; Clemson College, 8, 10; Gillisonville, 6, 7, 8, 12, 16, 17, 26; Shaw's Fork, 10, 11, 12; Society Hill, 8, 11; Statesburg, 12; Walhalla, 8, 12, 13.

## WEATHER AND CROPS.

The month of February, 1900, was much colder than usual, with three well-defined cold waves, one on the 1st of the month, the second on the 18th, and another on the 25-26th. The coldest weather of the month generally occurred during the second period, although at a few places it was coldest on the first. The temperature extremes were within previously recorded limits. There were comparatively few days on which the temperature rose above the normal, and the average mean was below the active growing point, over the greater portion of the State.

The rainfall was heavy, and in excess of the normal amounts, over the extreme western portions of the State, where, in places, it amounted to over ten inches, with gradually decreasing amounts toward the coast, where there was less than the usual amount, although the deficiency was not large enough to be harmful.

The weather conditions were unfavorable throughout the month for farming operations, and the severe cold of the 18th killed much truck of all kinds in the coastal regions. The ground was generally too wet to plow, and few, if any, spring

oats were sown, while reports from all sections of the State indicate that fall sown oats were badly damaged, especially on light, sandy soils. Many such fields will be plowed up and devoted to other crops. Wheat withstood the severe weather and, although small, remains promising.

Over the greater portion of the State, the buds of fruit trees showed no signs of swelling, and are probably uninjured. In the extreme southeastern portion of the State plum trees began to blossom on the 10th of the month, but other fruits, especially peaches, had not begun to bloom at the close of the month. It is believed that the fruit prospects are as yet unimpaired.

General farm work is later than usual. No corn was planted during the month, and gardening was impracticable owing to the coldness and wetness of the soil.

#### REMARKS BY OBSERVERS.

Little Mountain.—Small grains, especially oats, are badly damaged. It is estimated that one-half the oats crop is killed. No plowing has been done.—Jno. M. Sease, M. D.

Batesburg.—February has been a very unpleasant month. But little farm work has been done, and very little gardening. Had light snow on the 17th, and heavy hail on the 21st.—E. J. Hite.

Beaufort.—February has been cold and trying. The cold wave on the 18th killed truck generally, and damaged oats. Mean daily temperature was  $3.6^{\circ}$  below the normal, and  $0.2^{\circ}$  colder than the mean for this month in 1899.—S. M. Benton.

Winthrop College.—Sleet fell on the 17th, before 7 a. m., and a few flakes of snow, at intervals, during the forenoon. Twenty-first: Hail stones only partly frozen; numbers were larger in size than eggs or walnuts. There was also a double rainbow on this date.—Prof. Cleveland Abbe, Jr.

Shaw's Fork.—The February sand storms began on the 1st. Lightning during the evening of the 11th, and thunder on the morning of the 12th. Heavy south wind, and a sand storm on the 17th. Heavy northwest winds from 6 p. m. of the 21st to 4 p. m. of the 24th with a sand storm.—Geo. H. Atwood.

Liberty.—No plowing, scarcely, this month—not more than two days—consequently oats are not sown, except a few that were sown in January, but which are not up and seem to be killed. Fruit trees show no sign of spring. Wheat is still alive, but is small. The month has been unusually cold and wet.—Jno. T. Boggs.

Longshore.—Thunder and lightning in the northwest on the night of the 8th. Thunder cloud on the night of the 11th. On the afternoon of the 21st there was a thunderstorm with hail and rain. Lightning struck a tree near the station. High winds all night of the 24th, on which date the temperature fell  $19^{\circ}$  from dark until daylight.—W. G. Peterson.

Trenton.—Considerable hail on the afternoon and night of the 21st, doing some damage to grain. Precipitation 2.59

inches more than the 7-year average for February, and 0.66 inch more than the 7-year average for the first two months of the year. Oats have been badly thinned by freezes, winds, and hail storms. Some fields about all killed.—C. A. Long.

Gillisonville.—Rough weather during the entire month. On the 1-3d, and again on the 25-26th, the ground was frozen to the depth of one inch. Very cold on the 15th, but the ground did not freeze. Brisk, cold winds interfered greatly with farm work, which is somewhat behind. Plum trees in bloom on the 10th. Peach trees in hard buds; both have apparently withstood the weather so far. Too cold and wet for gardens.—Sam P. Saltus.

Santuc.—The month was very unfavorable for farm work. Fall oats are damaged by winter killing, and this month was too wet for sowing spring oats. The latter part of the month was stormy. The snow on the 17th came as a blizzard, and the weather turned uncomfortably cold. There were thunderstorms on the 21st and 24th, with nearly as great electrical displays as during the summer season. High winds were prevalent. The month closed with a heavy wind and rain storm.—E. W. Jeter.

#### FEBRUARY'S VARIABLE WEATHER.

In recent years, and the same was probably true before weather records were so generally kept, the month of February has become noted as the most variable month of the year. In some years the entire month is spring-like, mild and balmy. Again the entire month is cold, wet, cloudy, and windy, while other years exhibit in rapid succession the various weather phases peculiar to this State in the winter season.

The mean temperature for February, deduced from varying periods of from 5 to 12 years' observations, is  $46.3^{\circ}$ , or nearly  $2^{\circ}$  higher than the mean for January. State means have been deduced from observations covering so short a period of time that it is not probable that the extreme variation has been definitely determined, only approximately so, by the existing record, which dates back to 1893. Since that time February, 1897, was the warmest, with a State mean of  $50.0^{\circ}$ , and February, 1895, the coldest, with a mean temperature of  $37.4^{\circ}$ .

The highest maximum temperature recorded in the past 8 years was  $83^{\circ}$  at Gillisonville in February, 1897, and the lowest minimum in 1899 at Santuc and Shaw's Fork, where  $11^{\circ}$  below zero was noted on the morning of the 14th.

It is not alone in the matter of temperature that the month shows great variability, but also in precipitation, which for the past 8 years ranged from a State average of 0.86 of an inch in 1898 to 7.89 inches in 1897, while the average amount, or normal, is 4.40 inches. Snow is quite common, and there has been no year since 1893 without some snow in the State. The least was recorded in 1898 when only a trace fell at Society Hill, while the year with heaviest snowfall was 1895 when 18.5 inches were recorded at Holland. Snow seldom accumulates to any considerable depth, and rarely remains on the ground longer than three days, except in 1895 when it lasted about seven days.

Farm work usually is actively carried on in this month, especially in the eastern portions, where lands for corn and cotton receive their first preparation, and in some years corn and oats are planted during the latter part of February. In the same sections fruit trees usually begin to bloom and gardens are prepared and planted, while the hardier vegetables are cultivated on the truck farms. In the central and western portions of the State little farm work except plowing is practicable, and usually it is too wet to do much of that.

## CLIMATOLOGICAL DATA FOR THE MONTH OF FEBRUARY, 1900.

REPORT FOR APRIL, 1900.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR APRIL, 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

**CLIMATE AND CROP SERVICE**

OF THE

**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. III.

COLUMBIA, S. C., APRIL, 1900.

No. 4.

**CLIMATOLOGY FOR THE MONTH.**

Temperature, in Degrees Fahrenheit.

The mean temperature for the month of April, 1900, was 62.4°, which is 0.2° above the normal. The highest local mean was 67.6° at Beaufort; the lowest local mean was 57.5° at Greenville. The highest temperature for the month was 90° at Gillisonville on the 29th; the lowest temperature was 24° at Clemson College, Greenville, and Holland on the 1st, making the State range 66°. The greatest local monthly range was 62° at Liberty, and the least local monthly range was 37° at Charleston. The mean of the daily maximum temperatures was 73.5°, and of the daily minimum temperatures was 51.2°.

Precipitation, in Inches.

The average April, 1900, precipitation for the State was 5.41 inches, which is 2.38 above the normal, or, expressed in percentage, was 1.78 per centum of the usual amount. The rainfall was heaviest, and in excess of 6 inches, over the western portion of the State, and was least along the immediate coast region northeastward from Charleston. The greatest local amount for the month was 10.32 inches at Shaw's Fork, and the least local amount was 2.35 inches at Georgetown. The greatest 24-hourly fall was 4.35 inches at Camden on the 18-19th. The average number of days with rain was 9, ranging from 3 at Georgetown to 14 at Little Mountain.

Hail.—Charleston, 27th (severe); Longshore, 21st; Pinopolis, 12th (severe), 29th.

**CLIMATE AND CROPS.**

The temperature conditions during April, 1900, were extremely favorable after the 5th instant, on which date the last general killing frost occurred, except that on the 13th and 14th there was an unusually cool period with killing frosts in the extreme western portions of the State, but none of the April frosts were severe enough to do any perceptible damage to field crops, fruits, or gardens which at the beginning

of the month were very backward over the region where the minimum temperature fell below freezing, to which circumstance they owe their immunity.

The average rainfall was, with one exception, the heaviest on record for April, and, as in February and March, was nearly twice the normal amount over the western portions of the State, where, after the 17th, it practically stopped all farm work on account of making the ground too wet to plow. In this portion of the State, the heavy rainfall damaged terraced lands, washed hillsides, and carried away bridges. However, the physical injury to lands was unimportant when compared with the probable damage caused by delaying farming operation.

Over the eastern portions of the State, farm work made rapid progress, and practically all corn and cotton, and the numerous minor crops, were planted, and some came up to excellent stands and received their first cultivation.

In the western portions, the conditions were less favorable early in the month and planting operations were only well underway when they were interrupted by a week of heavy rains, beginning on the 17th, and it was near the close of the month before they could be resumed, and even then bottom lands were too wet to work, thus making an already backward season still later.

The immediate effect of the copious rainfall seemed beneficial on wheat and oats. The latter made rapid improvement and on fields that maintained a stand through the winter, this crop was very promising. Later developments seemed to indicate that the rainfall was injurious to wheat.

The general outlook for peaches continued excellent, but pear and apple trees began to blight toward the close of the month. The prospects for minor crops, fruits, berries, gardens and truck were above the seasonal average.

**MISCELLANEOUS PHENOMENA (with dates).**

Weather.—The average number of clear days during April was 12, of partly cloudy days 9, and of cloudy days was 9.

Winds.—The prevailing direction of the wind for the State was from the northeast. Locally the prevailing direction was from the northeast at 10 stations; from the east and south at 7 stations each; from the southeast at 6 stations; from the southwest, west and northwest at 5 stations each; and from the north at 2 stations.

High Winds.—Beaufort, 18; Blackville, 4, 17; Trial, 4, 18; Walhalla, 4.

Ice.—Thin ice formed over practically the entire State on the 1st, and over a large portion of the State on the 5th.

Solar Halos.—Beaufort, 23; Charleston, 9, 22, 23; Santuc, 14; Statesburg, 8, 23.

Lunar Halos.—Beaufort, Gillisonville, 11; Charleston, 8, 10, 16; Columbia, 6, 10, 15; Shaw's Fork, 15; Winthrop College, 6.

Fogs, Dense.—Blackville, 12; Camden, St. Stephens, 29; Clemson College, 19, 22; Gillisonville, Santuc, 22; Liberty,

Spartanburg, Yorkville, 19; Society Hill, 27; Statesburg, 12, 28; Walhalla, 20, 21, 22; Winthrop College, 11, 19, 22.

Thunderstorms.—Beaufort, 9, 12, 17, 20, 21, 24, 27, 28, 29, 30; Blackville, 9, 10, 18, 27, 29; Charleston, 9, 10, 12, 27, 28, 29, 30; Cheraw, 3, 11, 18; Clemson College, 10, 11, 17, 20, 21; Columbia, 3, 11, 12; Gillisonville, 9, 12, 18, 20, 21, 24, 27, 28, 29, 30; Greenville, 21; Holland, 26, 27; Liberty, 3, 4, 11, 17, 20, 21, 23, 26; Little Mountain, 3, 18, 19, 20, 21; Longshore, 3, 9, 10, 11, 17, 20, 21, 22, 25, 26, 27, 29, 30; Santuc, 4, 11, 12, 17, 18, 20, 21, 23, 30; Shaw's Fork, 17, 18, 21, 26; Society Hill, 11, 30; Statesburg, 17, 18, 19, 20; Summerville, 9, 12, 27, 28, 29; Trenton, 19, 20, 28, 29; Trial, 3, 10, 11, 12, 29; Walhalla, 17, 18, 20, 21, 25, 26; Winthrop College, 11, 12, 17, 21; Yorkville, 30.

Killing Frost (probably last of the season).—Charleston, March 17th; Georgetown, March 12th; Pinopolis, March 18th; Summerville, March 31st; Allendale, Batesburg, Beaufort, Blackville, Columbia, Gillisonville, Liberty, Statesburg, April 1st; Camden, Cheraw, Conway, Darlington, Edisto, Effingham, Florence, Gaffney, Greenwood, Kingstree, Little Mountain, Longshore, St. George, St. Matthews, St. Stephens, Smiths Mills, Temperance, Winthrop College, Yemassee, Yorkville, April 5th; Clemson College, Greenville, Trenton, Walhalla, April 13th; Holland, Winnsboro, April 14th; Santuc, April 6th; Shaw's Fork, 3d; Society Hill, 4th; Spartanburg, 2d; Trial, 14th.

#### REMARKS BY OBSERVERS.

Holland.—April 1st there was a severe freeze that seriously injured the peach crop. Planting of cotton began on April 14th.—Dr. J. W. Earle.

Gillisonville.—Month wet and warm. First half favorable and entire cotton crop planted; last half too wet to work with good results, although some corn was cultivated. Some complaint as to stands of cotton. Sugar cane and gardens doing well.—Sam P. Saltus.

Trenton.—Ice, and ground frozen slightly, on the 1st. Precipitation for April was 1.28 inches more than the 7-year average for this month, and since January 1st it has been 1.22 inches more than the average for the first 4 months of the year.—C. A. Long.

Winthrop College.—Brisk wind on the afternoon of the 17th. On the 18th, between 8.30 a. m. and 6 p. m., 1.74 inches of rain fell. Heaviest at 1.30 p. m. Fruit and crops were not seriously injured by the frost on the 5th. Peaches abundant, and were as large as hazel nuts on the 30th.—Dr. Cleveland Abbe, Jr.

Statesburg.—8th, martins and whippoorwills heard; 10th, bee-birds seen; 12th, summer red birds heard; 13th, humming birds seen; 16th, swallows seen, and large brown fly-catcher

heard, indicating that there will be no more killing frosts; 21st, nonpareil and chuck-will-willow heard; 33d, night hawks arrived.—W. W. Anderson, M. D.

Beaufort.—The mean temperature is  $1.9^{\circ}$  above the normal. The rainfall is 2.65 inches above the normal. There was too much rain for the lowlands. Grass is growing rapidly, and in places is getting ahead of crops. Oats and potatoes look well. Dogwood in bloom on the 6th; apple trees on the 10th; and locust trees on the 23d.—S. M. Benton.

Longshore.—On the 17th, during a thunderstorm from the southwest, 1.63 inches of rain fell in 40 minutes. From 6.20 p. m. of the 17th to 6.20 p. m. of the 18th the rainfall was 3.94 inches. April was a wet month and very detrimental to farm work. The lands are badly washed, and the bulk of the cotton and corn crops will have to be planted in May.—W. G. Peterson.

Liberty.—At the end of April, not one-half of the cotton or corn crops has been planted in this section. Corn and cotton that were planted early are up to good stands. All vegetation growing rapidly. The fruit crop is at present very promising. Strawberries, blackberries and all other berries are blooming more freely than usual.—John T. Boggs.

Santuc.—The latter part of the month was very wet, owing to frequent heavy rains. Lands were badly washed, streams overflowed their banks, and fences, timber, and bridges were washed away. Farm work got belated, and planting operations were delayed at least ten days. Wheat is much improved. A wavy light, as if an electric light was behind the clouds, was seen in the northeast, on the night of the 20th, supposed to have been the reflection of lightning from a far off storm.—E. W. Jeter.

#### NOTES AND COMMENTS

The minimum temperature at Shaw's Fork, in the opinion of the voluntary observer, averaged about  $5^{\circ}$  too low for the month of April. Applying this correction, and deducing the mean temperature for the month in the usual manner, would make the monthly mean temperature  $64.0^{\circ}$  instead of  $61.5^{\circ}$  as published. The corrected mean would more nearly agree with surrounding stations.

It has long been the intention of the Chief of the Weather Bureau, and it now appears that it will be feasible to do so during the next fiscal year, to give every voluntary observer a blank bound book, suitably arranged and ruled off, with appropriate headings, in which to record the observations taken at voluntary observing stations. The proposed arrangement of the book is such as to permit each month's data to be entered on the same page. When distributed, the books will become the private property of the voluntary observers receiving them.

REPORT FOR MAY, 1900.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR MAY, 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

**CLIMATE AND CROP SERVICE**

OF THE

**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

Vol. III. COLUMBIA, S. C., MAY, 1900. No. 5.

**CLIMATOLOGY FOR THE MONTH.****Temperature, in Degrees Fahrenheit.**

The mean temperature for the month of May, 1900, was 70.2°, which is 1.5° below the normal. The highest local mean was 73.8° at Charleston, and the lowest local mean was 65.9° at Greenville. The highest temperature for the month was 96° at Liberty on the 13th and Yorkville on the 14th. The lowest temperature was 38° at Trial on the 11th, and at Walhalla on the 10th, making the State range 58°. The greatest local range was 56° at Liberty, and the least local range was 29° at Charleston. The mean of the daily maximum temperatures was 81.8°, and of the daily minimum temperatures was 58.5°.

Frosts.—Light frost was reported from Longshore and Santuc on the 11th, and from Shaw's Fork on the 10th. Climate and crop correspondents reported light frost from points in Cherokee, Colleton, Greenville, and Spartanburg counties on the 10th and 11th.

**Precipitation, in Inches.**

The average precipitation for May, 1900, was 2.37 inches, which is 0.91 below the normal. The greatest local amount for the month was 4.99 inches at Yorkville, and the least local amount was 1.17 at Society Hill. The greatest 24-hourly fall was 2.60 inches at Columbia on the 17-18th. The average number of days with rain was 5, ranging from 2 at Walhalla to 9 at Charleston.

Hail.—Hail was reported from Abbeville on the 3d; Longshore, 18th; Orangeburg and Trenton, 9th; Spartanburg, 4th.

Heavy Rains.—Beaufort, 1.60 inches in 3 hours on the 18th; Columbia, 2.25 inches in 2 hours 5 minutes on the 18th; Calhoun Fall, 1.42 inches in 2 hours on the 18th; Clemson College, 0.77 inch in 1 hour 30 minutes on the 18th; Temperance, 0.83 inch in 1 hour 30 minutes on the 18th.

**CLIMATE AND CROPS.**

The effect on crops of the prevailing weather during May, 1900, was generally adverse to their rapid, or favorable de-

velopment, chiefly on account of cool nights which retarded their growth, and of lack of moisture to germinate seeds that were planted late in April and during the first decade of May.

There were no unusually high temperatures during the month, and the average of the daily maximum (81.8°) indicates about normal day temperatures, but the average of the daily minimum temperatures (58.8°) also indicates that the night temperatures were lower than usual, and this was most marked from the 9th to the 12th, and during the third decade. The average daily range of temperature for the month was 23.6°. Light frosts occurred on the 10th and 11th, at a few points, doing little or no injury except to tender vegetation.

There was less than the usual amount of precipitation, with the exception of small areas in the north-central and extreme southeastern portions where, at a few places, there was a slight excess. Even at points where there was the least rainfall, the drought was not severe, and only the surface soil became very dry, preventing the rapid germination of seeds, while deep-rooted plants did not, at any time, suffer from lack of moisture. The general rain of the 17-18th supplied enough moisture for the needs of plants for the remainder of the month.

The month was an exceedingly favorable one for the prosecution of farm work.

Destructive insects were numerous. Cut and bud worms destroyed much young corn, especially on bottom lands; Colorado beetles injured white potatoes; grasshoppers infested a few fields of cotton; and by the close of the month worms made their appearance in large numbers on tobacco.

Cotton planting was quite generally finished by the 20th, but germination and growth of late planted seed was slow, and stands were irregular. The condition of early planted cotton was better, but the plants remained undersized.

Corn did well, except on bottom lands where the stands were kept broken by worms, necessitating replanting. Wheat developed into an excellent crop and ripened during the latter part of the month. Oats improved, but not enough so to make the crop noteworthy for its excellence, except in spots.

The weather was generally unfavorable on tobacco, and the plants remained stunted. Rice planting was hindered, early in the month, by high water in the lower rivers, but eventually about the usual area was seeded. Minor crops, gardens and truck made favorable progress. The peach crop continued promising, although considerable dropping was reported. Apple and pear trees blighted badly. Cultivated and wild berries were plentiful. Fields were as a rule well cultivated, and were unusually free from grass and weeds.

**ERRATA.**

April, 1900, report, page 5, mean temperature at Clemson College, 60.0°, should read 60.4°. Page 5, mean temperature at Greenville, 57.5°, should read 57.6°. Page 5, the total precipitation at Little Mountain, 6.05, should read 6.04.

## MISCELLANEOUS PHENOMENA (with dates).

Weather.—The average number of clear days was 19, of partly cloudy days was 7, and of cloudy days was 5.

Winds.—The prevailing direction of wind was from the southwest at 28 stations, from the south and west at 5 stations each, and from the north and northeast at 1 station each.

High Winds.—High winds were reported from Charleston on the 10th; Liberty, 4, 5, 6, 8, 9, 10, 11, 19, 20; Walhalla, 3, 4, 5, 8, 9, 19.

Earthquake.—Summerville 10th, at 6.20 p. m.

Solar Halos.—Charleston, 5, 8, 9, 13, 21; Gillisonville, 18; Santuc, 9, 30, 31; Statesburg, 23.

Lunar Halos.—Blackville, Columbia, Shaw's Fork, Walhalla, 7; Charleston, 1, 13; Gillisonville, 3, 7; Santuc, Society Hill, 7, 8; Statesburg, 5, 8.

Fogs, Dense.—Beaufort, 22; Blackville, Longshore, 1; Camden, 27; Gillisonville, 14, 15, 29; Liberty, 3; Little Mountain, 2; Society Hill, 16; Statesburg, 17.

Thunderstorms.—Beaufort, 2, 9, 17, 18, 20, 23, 25; Blackville, 1, 2, 9, 18; Charleston, 9, 17; Cheraw (2), 1, 3, 9, 17, 18, 24; Clemson College, 2; Columbia, 9, 18; Gillisonville, 1, 2, 8, 18, 23, 24, 25; Liberty, 18, 24; Longshore, 2, 8, 9, 18; Santuc, 3, 18, 24; Shaw's Fork, 1, 18; Society Hill, Statesburg, 9; Spartanburg, 4; Trenton, 1, 2, 3, 9, 17, 18; Walhalla, 18; Winthrop College, 3, 17, 18, 19; Yorkville, 3, 9, 24.

## ECLIPSE OF MAY 28, 1900.

Clear skies, light winds, and an atmosphere nearly free from dust and haze prevailed along the line of totality in South Carolina.

These meteorological conditions underwent but slight change during the event. Observations of the wind direction and estimated force were made on the summit of Little Mountain, S. C. The direction of the wind was from the southwest, at the beginning of totality, but as the obscuration increased the wind became more westerly, so that for a short time before, during, and for a few minutes after totality it was due west; as the obscuration decreased, the wind gradually shifted to the southwest. The force of the wind exhibited a similar change, from merely a light breeze at the time of first contact, to a fresh or brisk wind while it blew from the west; after which it gradually subsided until after the last contact it was again a gentle zephyr.

The temperature gave an inverted range from 7.30 a. m. to 8.44 a. m., that is to say, a fall of  $4.8^{\circ}$ . After 8.44 a. m. there was a gradual rise which became rapid, as soon as the sun was, half or more, uncovered. On the following day, under nearly like meteorological conditions, the temperature

rose  $5.5^{\circ}$  from 7.30 to 8.45 a. m. Thus the eclipse effected a change of  $10.3^{\circ}$

The shadow bands were not as plainly marked as was expected, and no data could be secured except the direction they moved and the time they occurred.

## REMARKS BY OBSERVERS.

Batesburg.—Cool nights during the month retarded the growth of crops.—E. J. Hite.

Cheraw (1).—During the eclipse of the sun on the 28th, the temperature fell rapidly at the time of totality, from  $70^{\circ}$  to  $66^{\circ}$ , rising again rapidly as the obscuration passed.—W. R. Godfrey.

Beaufort.—The weather during May was fine, with no extremes of heat or cold. Rainfall on the 25th was excessive, but did damage on lowlands only. Crops generally grew well.—S. M. Benton.

Society Hill.—The eclipse of the sun on the 28th, was nearly total at this place, the unobscured portion appeared as a straight line. The temperature fell  $3^{\circ}$  during the eclipse.—Maj. J. J. Lucas.

Trenton.—Eclipse of the sun on the 28th. Precipitation 1.00 inch less than the 8-year average for May, and 0.53 inch less than the 7-year average for the first 5 months of the year.—C. A. Long.

Holland.—The planting of cotton was finished about the 12th, two weeks later than usual. Wheat and oats are the best crops in years, both were ready to harvest on the 31st. Fruit of all kinds very fine.—Dr. J. W. Earle.

Santuc.—The first portion of the month was dry, and crops made slow growth, but during the latter half, they did better. Planting operations were later than usual. Worms were very destructive to corn just coming up.—E. W. Jeter.

Liberty.—Wheat fired and rusted during the month. Oats improved wonderfully after the rains of the 17-18th, which also brought up cotton, and by the close of the month fine stands of cotton were general. Birds and worms damaged much corn. The berry crop is fine.—John T. Boggs.

Winthrop College.—6th, peaches as large as hickory nuts; 29th, good stand of wheat; heads are full and just beginning to ripen. Rock Hill proves to have been just outside (north-west) of the path of totality of eclipse of the 28th. Shadow bands were distinctly shown here.—Dr. Cleveland Abbe, Jr.

Gillisonville.—During the month, the days were warm and the nights were cool, conditions not favorable for plant growth, and crops grew slowly. The weather favored cultivation, and fields are free from weeds and grass. Peaches did well, but apple and pear trees blighted badly.—Sam P. Saltus.

**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,

COLUMBIA, S. C.

VOL. III.

COLUMBIA, S. C., JULY, 1900.

No. 7.

**CLIMATE AND CROPS.**

The weather conditions during July, 1900, were generally favorable to crop growth and development. There were no excessively hot periods, except locally over limited areas, neither were there any cool spells such as sometimes occur in this month. The average daily range of temperature was  $20^{\circ}$ , and there were no sudden transitions from heat to cold or the reverse; the extreme daily variability in mean temperature, in the central counties, was  $5^{\circ}$ , and the average less than  $2^{\circ}$ . This uniformity in heat was in the highest degree favorable to normal crop development.

There was greater diversity in the matter of rainfall which for different localities ranged from about one inch to nearly twelve inches, and for the whole State averaged 64 per cent. of the normal amount. The region around Charleston, and the whole or portions of Greenwood, Saluda, Laurens, Abbeville, Anderson, Oconee, and Greenville counties, and very restricted areas in various other portions, suffered to a considerable extent for lack of moisture, but the remainder of the State, and by far the greater portion, received enough rain for the current needs of all crops.

Thus the variability in moisture supply caused a corresponding diversity in the condition of crops, with, however, the general condition of all crops more promising than during the previous month. The dry and hot weather during the first 20 days was very favorable for cleaning fields of grass and weeds, and for giving corn and cotton the much needed cultivation preparatory to laying by, which the heavy rains in June had rendered impracticable. The grass and weeds had a rank growth necessitating heavy working to destroy them, and the heavy working at this season, was in places injurious to corn and cotton.

Crops that came to maturity during this month, such as melons, peaches, and garden truck reflected the injurious effects of the June excessive rains, to a marked degree. Tobacco showed improvement, and was unusually free from worms.

The absence of harmful insects in destructive numbers was a marked characteristic of the month, as was the general

absence of severe wind or hail storms which were noted on two dates only, and over very small areas in portions of four counties.

Staple crops had suffered so much impairment during June that the favorable weather in July at best barely enabled them to recover normal conditions, and to a considerable extent they failed to do so, especially old corn that came to maturity during the month, and cotton on light or sandy soils from which the applied fertilizers had leached. The minor crops did very well, and were promising by the end of July.

**CLIMATOLOGY FOR THE MONTH.****Temperature, in Degrees Fahrenheit.**

The mean temperature for the month of July, 1900, was  $81.2^{\circ}$ , which is  $1.7^{\circ}$  above the normal. The highest local mean was  $84.2^{\circ}$  at Yemassee; the lowest local mean was  $77.0^{\circ}$  at Walhalla. The highest temperature for the month was  $104^{\circ}$  at Batesburg on the 22d; the lowest temperature for the month was  $55^{\circ}$  at Walhalla on the 9th, making the State range  $49^{\circ}$ . The greatest local monthly range was  $41^{\circ}$  at Clemson College and Temperance, and the least local monthly range was  $24^{\circ}$  at Allendale and Charleston. The mean of the daily maximum temperatures was  $91.2^{\circ}$ , and of the daily minimum temperatures was  $71.2^{\circ}$ .

**Precipitation, in Inches.**

The average precipitation for July, 1900, was 4.08, which is 2.29 less than the normal amount. The greatest local amount for the month was 11.29 inches at Saint Matthews, and the least local amount was 1.05 inches at Greenwood. The greatest 24-hourly fall was 4.60 inches at Saint Matthews on the 28th. The average number of days with rain was 9, ranging from 3 at Georgetown to 15 at Columbia.

Hail.—Hail fell at Liberty on the 8th, in Cherokee county on the 11th and 28th, in Marion, Orangeburg, and Barnwell counties on the 28th.

Heavy Rains.—Beaufort, 1st: 2.12 in 3 hours; Beaufort, 27th: 1.60 in 30 minutes; Blackville, 11: 2.56 in 3 hours 5 minutes; Camden, 26–27th: 4.05 in 24 hours; Clemson College, 11th: 0.51 in 30 minutes; Liberty, 30th: 1.51 in 1 hour; Longshore, 2d: 1.92 in 1 hour; Saint Matthews, 28th: 4.60 in 24 hours; Shaws Fork, 24th: 0.95 in 30 minutes; Spartanburg, 13th: 1.06 in 30 minutes.

**MISCELLANEOUS PHENOMENA (with dates).**

Weather.—The month gave an average of 14 clear, 11 partly cloudy, and 6 cloudy days. There was less than the usual amount of cloudiness for July.

Winds.—The prevailing direction of the wind was from the

southwest at 30 stations; from the south at 5 stations; from the southeast at 3 stations, and from the east and west at 2 stations each.

High Winds.—Blackville, 11; Charleston, 9.

Solar Halos.—Charleston, 8, 23; Gillisonville, 2, 13.

Lunar Halos.—Blackville, Shaws Fork, 10; Charleston, 6, 7, 8; Statesburg, 6, 10, 13.

Fogs, Dense.—Camden, 15, 27; Cheraw (2), Society Hill, 3; Clemson College, 24; Gillisonville, 2, 3, 13; Liberty, 15, 27, 30; Statesburg, 29, 30; Trial, 10, 28; Walhalla, 3, 24.

Thunderstorms.—Thunderstorms were noted somewhere within the State on every date except the 17th, as follows: Beaufort, 1, 2, 3, 4, 6, 8, 9, 10, 15, 19, 21, 22, 23, 24, 26, 27, 28, 29, 30; Blackville, 11, 12, 15, 19, 21, 22, 23, 24, 25, 28; Camden, 25, 27; Charleston, 1, 2, 8, 11, 18, 21, 22, 24, 27, 28, 29; Cheraw (2), 2, 6, 7, 12, 19, 22, 23, 26; Columbia, 2, 3, 12, 18, 19, 20, 23, 24, 26; Gillisonville, 1, 2, 7, 8, 24, 26, 27, 28, 29, 30; Liberty, 2, 8, 13, 21, 26, 30; Longshore, 2, 3, 4, 5, 8, 12, 13, 14, 15, 22, 23, 26; Santuc, 2, 8, 22, 23, 25, 26, 31; Shaws Fork, 1, 19, 24, 27; Society Hill, 6, 19, 23, 26; Statesburg, 1, 2, 3, 11, 12, 19, 20, 22, 23, 24, 26, 28; Trenton, 1, 2, 3, 8, 11, 16, 23, 24, 25, 26, 27, 29; Trial, 1, 11, 12, 19, 22, 24, 26, 27, 28, 29; Walhalla, 1, 11, 12, 13, 22, 23, 25, 26; Winthrop College, 2, 8, 22, 23, 26, 30; Yorkville, 2, 8, 13, 21, 22, 24, 26, 30, 31.

#### ERRATUM.

JUNE, 1900.—Monthly report, page 5: mean temperature at Holland, 72.1°, should read 73.1°.

#### LOSS BY LIGHTNING.

Thunderstorms occurred on 25 days in June and on 30 days in July. Most of the storms were of moderate to slight intensity and attended by comparatively little thunder and lightning.

Previous to June no loss by lightning was reported, but during June and July reports were received of two churches, four barns, and seven dwellings having been struck and more or less damaged. Of these thirteen buildings but one, a barn, was completely destroyed by fire entailing a loss of \$550, which was the largest single item of loss reported. The total loss by lightning for the year up to August 1st, on buildings and contents, was \$1,113.

The loss from the killing of live stock was somewhat greater and included one horse, five oxen, and twelve mules, their aggregate value being estimated at \$1,550, making the total loss by lightning to August 1st, \$2,663.

The average annual number of deaths by lightning in South Carolina is thirteen, and has already been exceeded by one,

there having been fourteen fatalities during the first seven months of 1900.

#### REMARKS BY OBSERVERS.

Trenton.—Precipitation 2.66 inches less than the 8-year average for July, and 1.83 inches less than the 7-year average for the first seven months of the year.—C. A. Long.

Santuc.—There were no unusual phenomena during the month. The weather was very hot at times. Crops grew very well, but cotton and corn are in poor condition.—E. W. Jeter.

Batesburg.—The month was very dry up to the 24th, and crops suffered for rain. Cotton is dying from the effects of an insect that in appearance resembles a small yellow spider.—E. J. Hite.

Beaufort.—Temperature slightly below, and precipitation slightly above the normal. Cotton improved where it was clean. Cane, sorghum, slips, and peas look fairly well. Much of the fodder is burnt.—S. M. Benton.

Summerville.—Very little thunder and lightning during the month. Humidity 87 per cent. As compared with the same month in 1899, the month was warmer, but with much smaller range in temperature, and there was less cloudiness.—Prof. Jno. Gadsden.

Longshore.—9th, sundog on the left side of the sun; 10th, sundog in the morning. On account of the heavy rains during June, and on July 2d, crops got very grassy, but after hard work cotton was cleaned and is now doing fairly well.—W. G. Peterson.

Holland.—After a destructive drought of 21 days, rain fell on nearly every day to the close of the month. Cotton and corn improved wonderfully, and with subsequent favorable weather, there will be fair crops of cotton, late corn and potatoes. Wheat and oats gave good yields in thrashing.—Dr. J. W. Earle.

Liberty.—Seasonable weather characterized the month except that some sections were too dry to do good farm work. Cleaning crops after the June rains was extremely heavy work. All kinds of fruit is unusually plentiful, but much of it is rotting, and of inferior quality.—John T. Boggs.

Gillisonville.—The month was hot and humid during the daytime, and very pleasant at night. Cotton began to improve after the first week, and continued to do so throughout the month. Corn fired badly, two-thirds of the fodder being ruined. Peas, potatoes, and sugar cane promise well.—S. P. Saltus.

REPORT FOR AUGUST, 1900.

---

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

---

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

---

PREPARED UNDER DIRECTION OF  
WILLIS L. MOORE,  
CHIEF OF WEATHER BUREAU.

BY

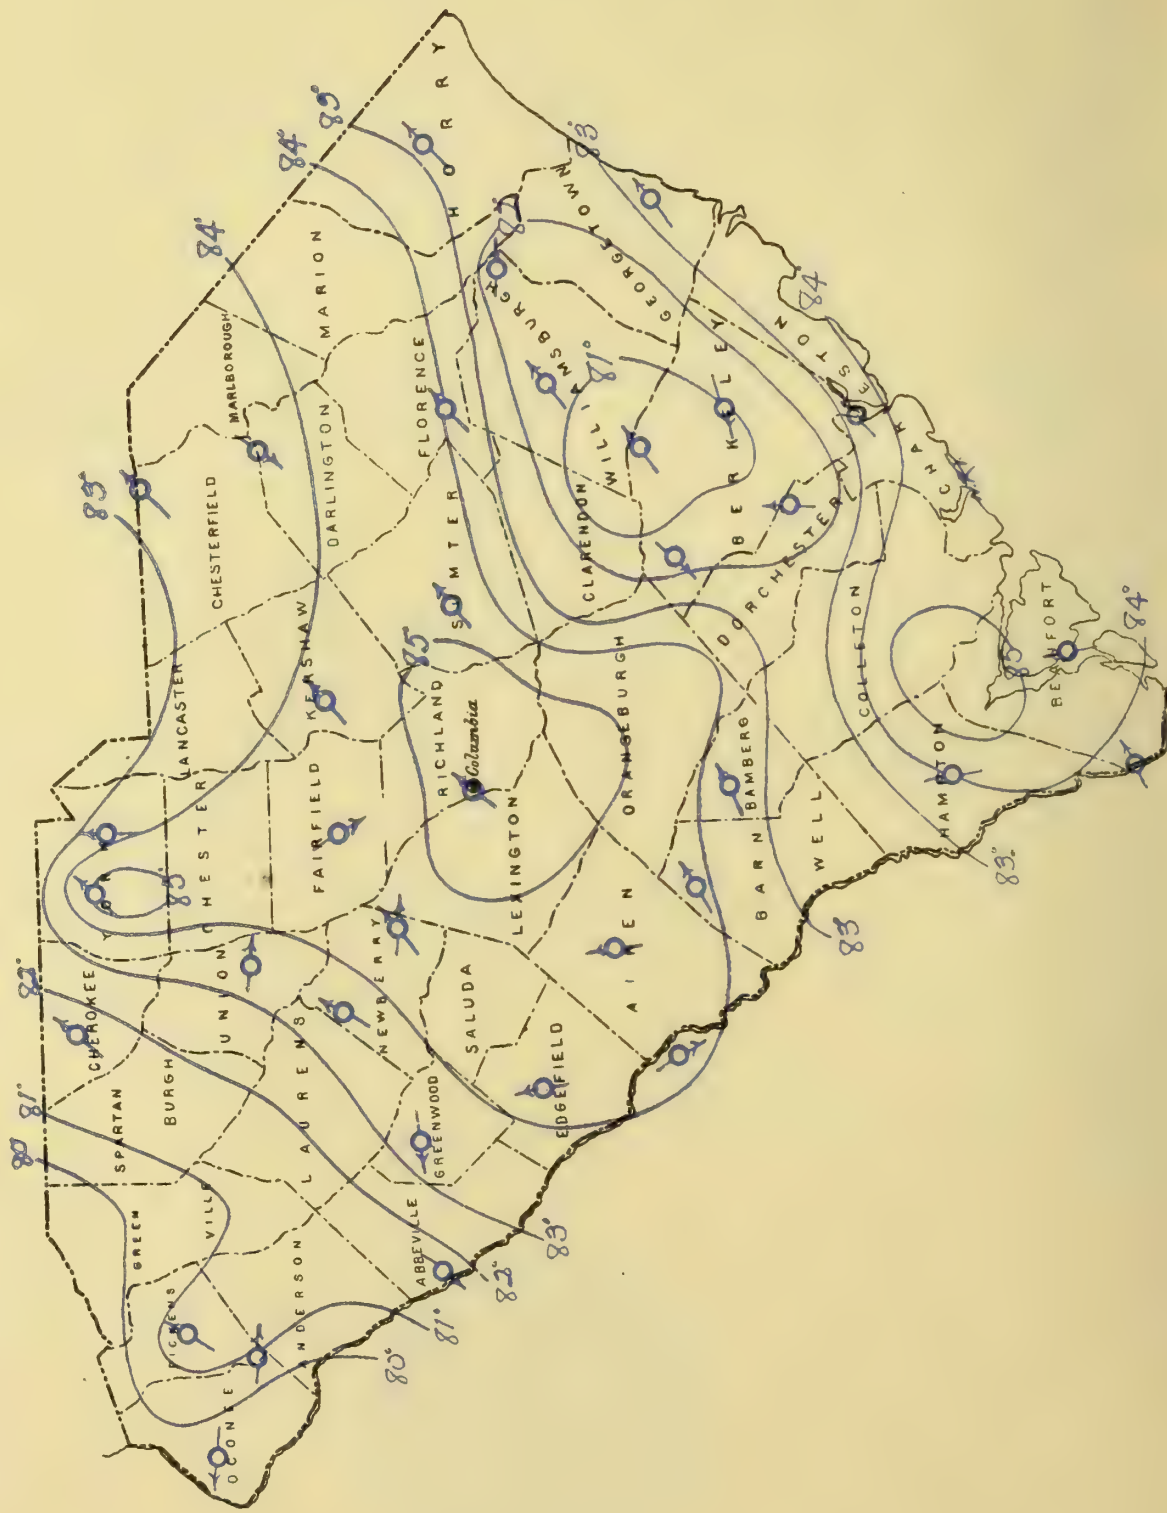

J. W. BAUER,  
SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR AUGUST, 1900.  
 (Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,  
**CLIMATE AND CROP SERVICE**  
 OF THE  
**WEATHER BUREAU.**  
 CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.  
 J. W. BAUER, Section Director,  
 COLUMBIA, S. C.

VOL. III. COLUMBIA, S. C., AUGUST, 1900. No. 8.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for the month of August, 1900, was  $83.0^{\circ}$ , which is  $4.4^{\circ}$  above the normal. The highest local mean was  $85.3^{\circ}$  at Yemassee, and the lowest local mean was  $79.4^{\circ}$  at Holland. The highest temperature for the month was  $106^{\circ}$  at Columbia on the 20th, and at Longshore on the 21st; the lowest temperature was  $60^{\circ}$  at Holland on the 25th, making the State range  $46^{\circ}$ . The greatest local monthly range was  $44^{\circ}$  at Gillisonville, and the least local monthly range was  $27^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $94.8^{\circ}$ , and of the daily minimum temperatures was  $71.3^{\circ}$ .

Precipitation, in Inches.

The average precipitation for August, 1900, was 2.13 inches, which is 4.18 inches below the normal. The greatest local monthly amount was 5.55 inches at Yemassee, and the least local monthly amount was 0.27 of an inch at Cheraw (2). The greatest 24-hourly fall was 3.30 inches at Saint Stephens on the 30th. The average number of days with rain, for 51 stations, was 5, ranging from 1 at Allendale to 10 at Sumterville.

Hail.—Pinopolis, 21st; Society Hill, 15th. Hail also was noted during the month in Beaufort, Dorchester, Edgefield, Lancaster, Newberry, Pickens, and Sumter counties.

Heavy Rains.—Beaufort, 30th, 2.20 in 8 hours; Blackville, 30th, 0.34 in 14 minutes; Saint Stephens, 30th, 3.30 in one hour.

Weather.—The average number of clear days was 21, of partly cloudy days was 9, and of cloudy days was 1.

Winds.—The prevailing direction of the wind was from the northwest at 23 stations; from the south at 7 stations; from

the west at 4 stations; from the east and northeast at 3 stations each; from the northwest at 2 stations.

High Winds.—Beaufort, 24th; Charleston, 19th; Gillisonville, 5th; Walhalla, 23d.

CLIMATE AND CROPS.

The month of August was noteworthy in respect both to temperature and precipitation, having been the hottest August of record as well as the driest. From the limited data available for comparison it appears also to have had more bright sunshine and less cloudiness than any preceding August of record. The mornings, evenings and nights were generally clear, while during the hottest portion of the daytime there was considerable cloudiness, culminating frequently in thunderstorms with, however, but little rainfall.

The extreme heat was due more to high maximum temperatures than to warm nights, as the latter were favorable to radiation of heat. The daily maximum temperatures averaged  $3.1^{\circ}$  higher than ever before recorded, while the night temperatures averaged only  $0.1^{\circ}$  higher. The heat, and the wide daily range of temperature, were too great for many forms of vegetation, and for the normal development of the crops cultivated in this State. Whether the crops would have suffered the serious impairment which they did, had the ground been copiously supplied with moisture is purely a speculative question incapable of definite answer, but the small amount of rainfall (34 per cent of the normal amount for the State, with localities having less than 10 per cent) would have of itself been an adverse condition.

The combination of excessive heat and severe drought caused all crops to deteriorate rapidly, especially so during the second week, when growth came to a standstill and much vegetation withered and died.

Cotton and corn suffered severely and what at the beginning of the month appeared to be very promising crops of these two staples, failed so rapidly during the month that both were very poor at the close.

Cotton shed leaves, forms, and bolls and rust developed quite extensively. The heat caused much premature opening of small bolls and none of the bolls attained their normal size.

Early corn came to maturity with the grain somewhat shrunk, while late corn in many instances failed to ear, and later its leaves and tassels died.

Of the many minor crops rice and sorghum withstood the drought best, while peas and sweet potatoes suffered most. Pastures and gardens were burnt by the hot sun and ruined. The damage was very great in the coast truck region, principally because there the rainfall deficiency was greatest.

The money value of the damage to all crops in South Carolina would, in the aggregate, reach appalling figures, and while nothing like a famine will result, nevertheless there will be less food and forage, home raised, than for many years.

## MISCELLANEOUS PHENOMENA (with dates).

Parhelion.—Liberty, 27; Santuc, 23.

Halos, Lunar.—Charleston, 12; Statesburg, 17.

Fogs, Dense.—Blackville, 3; Cheraw (2), Society Hill, 31; Gillisonville, 11, 12; Liberty, 5, 30; Statesburg, 10, 12.

Thunderstorms.—Beaufort, 1, 2, 3, 4, 14, 15, 18, 19, 24, 30, 31; Blackville, 10, 14, 18, 25, 29, 30, 31; Charleston, 1, 3, 4, 8, 14, 17, 18, 21, 22, 23, 24, 25, 26, 29, 30, 31; Cheraw (2), 12, 13, 15, 17, 20, 21, 22, 23, 25, 29; Columbia, 12, 16, 17, 20, 22, 23, 25, 29, 31; Gillisonville, 1, 3, 4, 14, 19, 21, 22, 24, 25, 27, 30, 31; Liberty, 3, 12, 23, 28, 29, 30, 31; Little Mountain, 11, 12, 17, 23, 24, 25, 29, 30; Longshore, 10, 11, 12, 13, 14, 15, 16, 17, 18, 20, 22, 29, 30, 31; Santuc, 11, 12, 17, 20, 23, 24, 25, 26, 29; Shaws Fork, 15, 17, 22, 25; Statesburg, 12, 15, 16, 17, 20, 21, 22, 23, 25, 26, 29, 30; Trial, 10, 14, 17, 21, 23, 25, 29, 31; Walhalla, 23; Winthrop College, 3, 17, 20, 24, 29, 30; Yorkville, 11, 12, 14, 17, 20, 22, 23, 24, 28, 29, 31.

## REMARKS BY OBSERVERS.

Darlington.—In an experience of over 30 years I have never known so many consecutive hot days as we have had this month, and which have been damaging to crops of all kinds.—E. R. McIver.

Greenwood.—In consequence of the extreme heat and the drought there remains nothing on cotton stalks, at the end of August, except full-grown bolls. The rains came too late to benefit cotton.—M. M. Calhoun.

Society Hill.—Maximum temperatures for this month exceed all previous records at this station. The heat has been disastrous to cotton, corn, and all field crops. Hail on the 15th did little or no damage.—Maj. J. J. Lucas.

Longshore.—There was a remarkable spell of heat from the 8th to the 23d, during which all former records for this station were broken. All crops were parched, and Newberry can not make over half a normal yield of cotton.—W. G. Peterson.

Summerville.—Slight earthquake tremor on the 10th at 7.50 p. m. From the 8th to 29th (inclusive) the maximum temperatures were 90°, or above, except on the 15th when it was 89°. So little rain fell during this time that crops of all kinds suffered.—Prof. John Gadsden.

Holland.—After the most destructive drought ever known, with a duration of only 19 days at this point, rains began during the last week of August, in spots. The estimated damage to crops is that they were cut down to one-half their normal yield.—Dr. J. W. Earle.

Trenton.—Precipitation 5.26 inches less than the 8-year average for August, and 6.18 inches less than the average for

the first 8 months of the year. The dry and hot month caused much damage to cotton. Peas and sweet potatoes will not make more than half crops. Old corn is an average crop.—C. A. Long.

Liberty.—There has been comparatively little rain, and it came in the form of partial showers. Old cotton that was well worked is well fruited, and late cotton—the bulk of the crop—is still growing and blooming, and with favorable seasons will make a good crop. Corn is an extremely poor crop.—Jno. T. Boggs.

Gillisonville.—Month was extremely hot and dry. Planters agree that the weather conditions were the most severe of any in their experience. Most of the cotton plants were killed during the second week. Late corn could not mature. The showers during the closing week revived sugar cane, peas, and potatoes.—Sam P. Saltus.

Beaufort.—The month was very hot and dry. Cotton and all other growing crops suffered severely in consequence. Fall gardens delayed in planting. Mean temperature 2.9° above normal, and precipitation 3.40 inches below normal. Electric storm on the 30th, during which three houses were struck by lightning, and one person killed by lightning.—S. M. Benton.

Santuc.—The weather was intensely hot for 13 days, during which time the maximum temperature ranged from 100° to 105°. Crops were badly burned. During the hottest weather clouds would form late in the afternoon, giving out heavy thunder, and then the clouds would disappear without a sprinkle of rain. The winds were heated, and were not refreshing. Stock water failed in places.—E. W. Jeter.

## HOTTEST AND DRIEST AUGUST.

The past August was the hottest and driest month of record for which reliable data are available. The previous August mean temperatures for the State are shown herewith in tabular form, and to indicate particularly that the increased heat was due more to high maximum temperatures than to high minimum readings, columns are added showing the mean of the daily maximum and daily minimum temperatures since 1893. Also one showing the average total rainfall. The table demonstrates at a glance the truth of the opening sentence, and affords a means of comparison with previous years. The normal August mean temperature is 78.6°, and the normal precipitation is 6.31 inches.

Year.	Mean maximum.	Mean minimum.	Monthly mean.	Departure.	Total precipitation.	Departure.
1893.....	91.7	67.3	77.8	-0.8	12.84	+6.53

WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR SEPTEMBER, 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

# CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

### SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

PL. III. COLUMBIA, S. C., SEPTEMBER, 1900. No. 9.

#### CLIMATOLOGY FOR THE MONTH.

##### Temperature, in Degrees Fahrenheit.

The mean temperature for September, 1900, was 77.1°, which is 2.9° above the normal. The highest local mean was 79.9° at Beaufort, and the lowest local mean was 73.0° at Holland. The highest temperature for the month was 90° at Cheraw (1), Columbia and Santuc on the 13th, at Temperance on the 14th, and at Yorkville on the 12th; the lowest temperature for the month was 45° at Holland and Walhalla on the 17th, making the State range 55°. The greatest local monthly range was 53° at Santuc, and the least local monthly range was 29° at Charleston. The mean of the daily maximum temperatures was 88.0°, and of the daily minimum temperatures was 66.2°.

##### Precipitation, in Inches.

The State average precipitation for September, 1900, was 3.33 inches, which is 1.30 below the normal. The greatest local amount was 6.15 inches at Trial, and the least local amount was 1.08 inches at Temperance. The greatest 24-hourly fall was 3.60 inches at Liberty on the 14th. The average number of days with rain, for 50 stations, was 5, ranging from 1 at Effingham and Winnsboro to 11 at Beaufort.

Excessive Rains: Allendale, 1st, 3.40 in 4 hours 30 minutes; Batesburg, 16th, 2.03 in 8 hours; Beaufort, 15th, 2.50 in 24 hours; Florence, 14-15th, 1.83 in 2 hours 5 minutes; Liberty, 14th, 3.60 in 24 hours; Little Mountain, 14-15th, 4.3 in 24 hours; Summerville, 15th, 3.04 in 24 hours; Trial, 14th, 3.31 in 15 hours 30 minutes; Walhalla, 13-14th, 3.00 in 24 hours.

Weather.—The average number of clear days was 19, of partly cloudy days 8, and of cloudy days 3.

Winds.—The prevailing direction of the wind was from the northeast at 19 stations; from the east at 9 stations; from the southeast, south and west at 4 stations each; from the south-

west at 2 stations, and from the northwest at 1 station.

High Winds.—Beaufort and Charleston 6th, Shaw's Fork, 13th.

#### WEATHER AND CROPS.

The opening weeks of September, 1900, gave a continuation of the abnormally hot and dry weather that had characterized August when, beginning on the 13th and continuing to the 15th, there were comparatively heavy rains over the entire State. The larger part of the month's precipitation fell during this period, although scattered light showers occurred early in the month and at its close.

There was a cool period on the 17th, 18th, and 19th during which the temperature was slightly below the normal, but with this exception the temperature ranged above normal during the entire month.

September had an unusually large number of clear days (19) which in connection with the prevailing high temperatures and absence of rain caused crops to ripen rapidly, prematurely in the case of much cotton and some corn. Gathering and harvesting made rapid progress, and the bulk of the cotton crop was picked during the month. Some fields were entirely finished, all having opened, while in others only scattering bolls remained unopened and unpicked. The lint was saved in fine condition, with a very small amount of stained cotton.

The weather conditions were unfavorable for the growth of vegetation up to the 15th, but after that date cotton began to take on a small top crop. The weather during August and the first two weeks of September reduced the yield of cotton materially, and in these six weeks of extreme heat and dryness amounting to severe drought in many places, this crop was changed from a promising to a very poor one.

The condition of corn did not improve during September, and late corn was a failure, while early and intermediate plantings were poor at maturity. Some corn was housed during this month.

Minor crops improved slightly after the middle of the month, but owing to the advanced stage of the season, their ultimate yields were but slightly bettered. The weather conditions were entirely favorable for the river rice crops which were largely harvested. Upland rice proved to be a failure. The rains started a rapid growth of grass for hay, and much was saved in fine condition.

The dry condition of the soil did not favor plowing and less than the usual amount of plowing and fall seeding was accomplished. The month as a whole was unfavorable on agricultural interests, except for harvesting.

#### SHORT CLIMATE AND CROP REVIEW.

The year of 1900 has been a noteworthy one in South Carolina, in the matters of rainfall and temperature, and their influence on crop production.

The temperature during February was unusually cold, but

after that month and up to August it differed but slightly from the normal for the same period. During August and the greater part of September it was continuously high, at times higher than ever before known, and too high for the normal development of field crops. In those months, the heat and dryness of the air, giving it an unusually large absorptive capacity, together with the scant rainfall, also increased the severity of the drought.

The average rainfall during April (5.41) was with one exception the heaviest on record for that month; during May it was slightly deficient, but owing to the amount of moisture in the ground, crops did not suffer from the deficiency; during June the rainfall was again very heavy (7.94), and averaged greater than ever before recorded for the month. Coming at the time when field crops are usually cultivated to promote their growth and to clear them of weeds, which work was greatly impeded, its effects on crops was unfavorable, but as the following July had only moderate rains, crops were again put into good, clean condition. August had the least rainfall on record for that month (2.13), and during the second week of August crops failed rapidly under the combined influence of the abnormally high temperature and lack of moisture, with subsequent weather conditions adverse to their recovery until the most of the crops had reached maturity.

The weather conditions were so abnormal during portions of the year that it is highly improbable that there will soon be a repetition as disastrous to agricultural interests. Those crops that reached maturity before August, such as the various cereals, most of the fruits, and tobacco, were fully up to, or above, their normal yields, while those that came to maturity subsequently, such as corn, cotton, peas, cane, and sweet potatoes (excepting river rice which was a large crop), were very poor.

#### ERRATUM.

August report, on page 8, for Spartanburg, the amount of precipitation on the 1st, blank, should be .04.

#### MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Gillisonville, 6, 15.

Lunar Halos.—Charleston, 12, 13; Gillisonville, 30.

Dense Fogs.—Blackville, 8, 9, 10, 11, 22, 29, 30; Camden, 10, 11; Cheraw (2), 8, 9; Gillisonville, 22, 23, 27, 29, 30; Liberty, 16; Little Mountain, 7, 8, 16; St. Stephens, 9, 10; Society Hill, 8, 9, 10, 11, 16.

Thunderstorms.—Beaufort, 1, 2, 4, 13, 14, 15, 28, 30; Blackville, Columbia, 1, 15; Charleston, 1, 13, 15, 30; Cheraw (2), 13, 16; Gillisonville, 1, 2, 5, 13, 14, 15, 30; Liberty, 13, 14, 15; Longshore, Walhalla, 1; Santuc, 13, 15; Shaws Fork, 1, 2, 30; Trial, 2, 13, 14, 15, 28, 30; Winthrop College, 13, 15, 30; Yorkville, 30.

#### REMARKS BY OBSERVERS.

Little Mountain.—The 14th of September was the first cloudy day since the 30th of July; at the end of the month nearly all cotton was open and picked.—Jno. M. Sease, M. D.

Longshore.—September was a fair, hot month; at its close cotton was nearly all gathered, with less than half an average crop made; corn proved to be very poor.—W. G. Peterson.

Trenton.—Precipitation 1.16 less than the 8-year average for September, and 7.08 inches less than the 7-year average for the first nine months of the year. Cotton all open and nearly all picked.—C. A. Long.

Batesburg.—Had very nice rains during the first portion of the month, but it became dry the latter part; peas and sweet potatoes improved; turnips were sown but some failed to come up; at the close of the month cotton was about all picked.—E. J. Hite.

Summerville.—Slight earthquake tremor on 4th, at 6.05 a. m.; another on 24th, at 2.36 p. m. Although it was very dry at times, the rains about the middle of the month prevented a drought at this point; the relative humidity was lower than during the previous month, and averaged 80 per cent.—Prof. John Gadsden.

Santuc.—A greater portion of the month was very hot, and dry; it was unfavorable for vegetation; turnips were killed to some extent; on the 13th the temperature reached 100° by 12.30 p. m., when the sky clouded, and the winds blew hard; streams ran very low, and some creeks dried up.—E. W. Jeter.

Liberty.—Another comparatively dry month; while cotton promised a good top crop at last report, it has since failed rapidly, shedding its fruit and wilting badly up to the 14th, after which it again improved considerably; late cotton is better than early; oats and rye were sown; fine hay crop saved.—Jno. T. Boggs.

Holland.—There was one rain in September, but it did not penetrate the soil to meet the ground water; ground dry again in three days, and it did not start growth of vegetation. It is my estimate that Anderson county will make three-fourths of a full crop of cotton, while others estimate it at a half or less.—Dr. J. W. Earle.

Beaufort.—The weather during September was fine for picking cotton, harvesting corn and hay, with unusually heavy crops of pea-vine and crab-grass hay made; sea-island cotton opened slowly; crop is very light. The mean temperature was 3° above the normal, and the precipitation was 2.34 inches below the normal.—S. M. Benton.

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR OCTOBER, 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

Vol. III. COLUMBIA, S. C., OCTOBER, 1900. No. 10.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for October, 1900, was  $67.6^{\circ}$ , which is  $5.3^{\circ}$  above the normal. The highest local mean was  $72.4^{\circ}$  at Beaufort, and the lowest local mean was  $63.2^{\circ}$  at Holland. The highest temperature for the month was  $95^{\circ}$  at Blackville on the 1st, and the lowest temperature for the month was  $33^{\circ}$  at Cheraw (1) and at Santuc on the 18th, making the State range  $62^{\circ}$ . The greatest local monthly range was  $57^{\circ}$  at Cheraw (1), and the least local monthly range was  $27^{\circ}$  at Charleston. The greatest daily range was  $42^{\circ}$  at Santuc. The mean of the daily maximum temperatures was  $76.6^{\circ}$ , and of the daily minimum temperatures was  $58.6^{\circ}$ .

Frosts.—The first light frost of the season, and the only one for the month, was noted as follows: Batesburg, Camden, Cheraw, Columbia, Gaffney, Greenville, Greenwood, Little Mountain, Longshore, Santuc, Society Hill, Spartanburg, Temperance, Trenton, Rock Hill, and Yorkville, 18th; Darlington, 17th; Shaws Fork, 16–19th.

Precipitation, in Inches.

The State average precipitation for October, 1900, was 3.65 inches, which is 0.52 in excess of the normal. The rainfall was evenly distributed, with small areas having less than 2 inches, and other small areas with over 6 inches, but the greater portion of the State had from 2 to 6 inches. The greatest local amount was 8.44 inches at Smiths Mills, and the least local amount was 1.79 inches at Florence. The greatest 24-hourly fall was 3.00 inches at Walhalla on the 22–23d. The average number of days with rain was 9, ranging from 3 at Allendale to 14 at Little Mountain.

Excessive Rains: Smiths Mills, 5th, 2.70 in 24 hours; Trenton, 25th, 0.60 in 30 minutes; Walhalla, 22–23d, 3.00 in 24 hours.

Weather.—The average number of clear days was 13, of partly cloudy days was 7, and of cloudy days was 11.

Winds.—The prevailing direction of the wind was from the northeast at 27 stations; from the east at 10 stations; from the north at 2 stations; from the southeast, south, west, and northwest at 1 station each.

High Winds.—Beaufort, 20–22d; Charleston, 12th.

## WEATHER AND CROPS.

The month of October, 1900, while warmer and with slightly more rainfall than usual, was quite favorable for maturing outstanding field crops, for gathering them, and for preparing and seeding fall grains, principally oats and rye.

There was a light frost over the central and northern counties on the morning of the 18th, the first of the season and the only one for the month, but even the most tender vegetation was not affected except in small spots where sweet potatoes and cotton were somewhat nipped. The temperature was generally high enough, and the soil held sufficient moisture, to stimulate new growth of many fall crops, particularly cotton, which in places grew vigorously and fruited heavily, taking on squares, blooms and bolls in profusion, but the bolls grew and opened slowly. The bulk, if not the entire early crop of open bolls, was picked by the 20th, after which the picking was limited to the slowly-maturing top crop, and was light in comparison with first pickings.

The corn crop was nearly all gathered during the month and was cribbed in good condition, with no improvement in the yields over the previous month. Generally early corn made an average crop, while late planted and stubble corn were practically failures.

The last of the river rice crop was harvested without mishap. Sweet potatoes were improved by the weather conditions, as were late peas and grass for hay, and turnips where stands had been obtained.

Oats were largely sown and germinated quickly, with unusually luxuriant stands of oats sown in September. The same is true of rye. Very little wheat was sown, although much ground was prepared and the indicated acreage is larger than usual. Pasturage was abundant during the entire month.

The weather conditions were most favorable to agricultural pursuits in the western, and least favorable in the southeastern portions.

## MISCELLANEOUS PHENOMENA (with dates).

Halos, Solar.—Charleston, 3, 4, 5, 7; Gillisonville, 7, 12; Santuc, 11; Statesburg, 10, 11, 20.

Halos, Lunar.—Charleston, 3, 7; Columbia, 6; Gillisonville, 2, 7, 16, 31; Santuc, 6, 7, 11.

Thunderstorms.—Beaufort, 2, 3, 4, 8, 20, 23; Blackville, 3, 4, 23, 24; Charleston, 3, 4, 8; Cheraw (2), 8; Clemson College, 21; Columbia, 3, 8, 12, 23; Gillisonville, 2, 3, 4, 7,

8, 24; Liberty, 5, 12, 22, 23; Longshore, 4, 5, 12, 22, 23; Santuc, 5, 23; Shaws Fork, 23, 24; Statesburg, 12, 23; Trenton, 12, 22; Walhalla, Winthrop College, 23.

Fogs, Dense.—Blackville, 6, 7, 8, 24, 25, 30; Camden, 14, 25, 26; Charleston, 28; Cheraw (2), 8, 14; Clemson College, 24, 27, 28, 29, 30; Gillisonville, 15, 16, 24, 25, 26, 27, 29, 30; Greenville, 30; Liberty, 6, 24, 27, 30; Longshore, 6, 7, 8, 29, 30, 31; St. Stephens, 8, 14, 27, 28; Santuc, 6, 7, 26, 27, 28, 30; Shaws Fork, 6, 7, 14; Smiths Mills, 9, 27; Society Hill, 14, 30, 31; Statesburg, 6, 7, 8, 14, 24, 25, 27; Winthrop College, 14, 24, 25, 30.

#### REMARKS BY OBSERVERS.

Longshore.—Enough frost on the 18th to nip tender vegetation.—W. G. Peterson.

Yorkville.—Light frost reported from the country on the 18th, but none visible here.—J. R. Schorb.

Society Hill.—The light frost on the morning of the 18th killed sweet potatoes in exposed places, and increased their yield; no damage to cotton save on lowlands.—Maj. J. J. Lucas.

Beaufort.—The latter part of the month was very dry. The month generally was favorable for harvesting cotton and corn. Turnips and fall gardens stand in need of rain.—S. M. Benton.

Gillisonville.—The month was warm and dry, conditions unfavorable to growth of fall crops and gardens. Little grain was sown, and it came up to fair stands on lowlands. Water very low in bays and creeks.—Sam P. Saltus.

Batesburg.—The month was very warm and pleasant except on a few days. Light frost on the 18th did damage in a few places only. The second growth of cotton looks very promising. Some fruit trees are in full bloom. Farmers are sowing grain.—E. J. Hite.

Trenton.—Precipitation for the month 2.84 inches, which is 0.90 inch less than the 8-year average for October, and the precipitation since January 1st is 8.60 inches less than the 7-year average for the first 10 months of the year. The yield of cotton is three-fifths of an average crop.—C. A. Long.

Holland.—There was somewhat more than the normal rainfall during October. The ground is not thoroughly wet, but has enough moisture for turnips and other fall crops. Second crop of Irish potatoes are blooming with prospects of a fair yield. The last ten days were unfavorable for cotton to open, and for picking.—Dr. J. W. Earle.

Santuc.—The month was a good one for farmwork. Much grain was sown, and the conditions were favorable for rapid

germination, and for growth. There were many fogs, very dense along the river course with precipitation as from light rain. The frost on the 18th was heaviest along the streams, and was considered more beneficial than harmful; it did but little damage to vegetation.—E. W. Jeter.

Liberty.—Unusually cloudy and damp month, but with a small amount of rain. Ground was too dry for plowing and to bring up grain until the 22d, after which date it remained damp and warm. Cotton has made a second growth, and the fields look green. Small grain sown in September is doing well. But few turnips this year. Late peas are good, and the second crop of hay is being cut.—John T. Boggs.

#### NOTES AND COMMENTS

A new voluntary observing station has been authorized at McColl, in Marlboro county, with Mr. N. L. Thayer as observer. Observations will probably begin on December 1st proximo.

There are two other points in the State where voluntary observing stations are desired, one at Lancaster and the other at Laurens. Efforts heretofore made to secure desirable observers at those points have failed.

With the opening of a new station in Marlboro county, and the probable establishment of stations in Lancaster and Laurens counties, there would remain only Chester county without a meteorological station of some kind reporting to this office, but this county would be so surrounded by stations that its climatic conditions, if peculiar, would be shown by them as well as if a station was located there.

That the climate of adjoining regions differs materially, especially in their temperatures, is shown conclusively by the contour of the lines connecting the places having the same monthly mean temperatures. These differences are not accidental or due to erroneous records, but continue from month to month and are not affected by changes in the instruments or observers. There is less regularity in the rainfall distribution, but there are great differences assignable to transient influences.

A study of the records of Climate and Crop Service of the Weather Bureau, in connection with the study of the soils and the normal rainfall distribution, can be made valuable to the agriculturalist, in determining the best time for planting early crops so that they may receive the benefit of continuous growth and escape the dangers of late frosts in the spring. Also in determining the kind or variety of crops best adapted to any particular climate and soil, and the fertilizers best suited either to force or to retard the growth of crops, whichever experience has proven to be most desirable, so as to get the benefit of a prolonged season, or to bring them to early maturity to avoid killing frost in the autumn.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR NOVEMBER, 1900.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

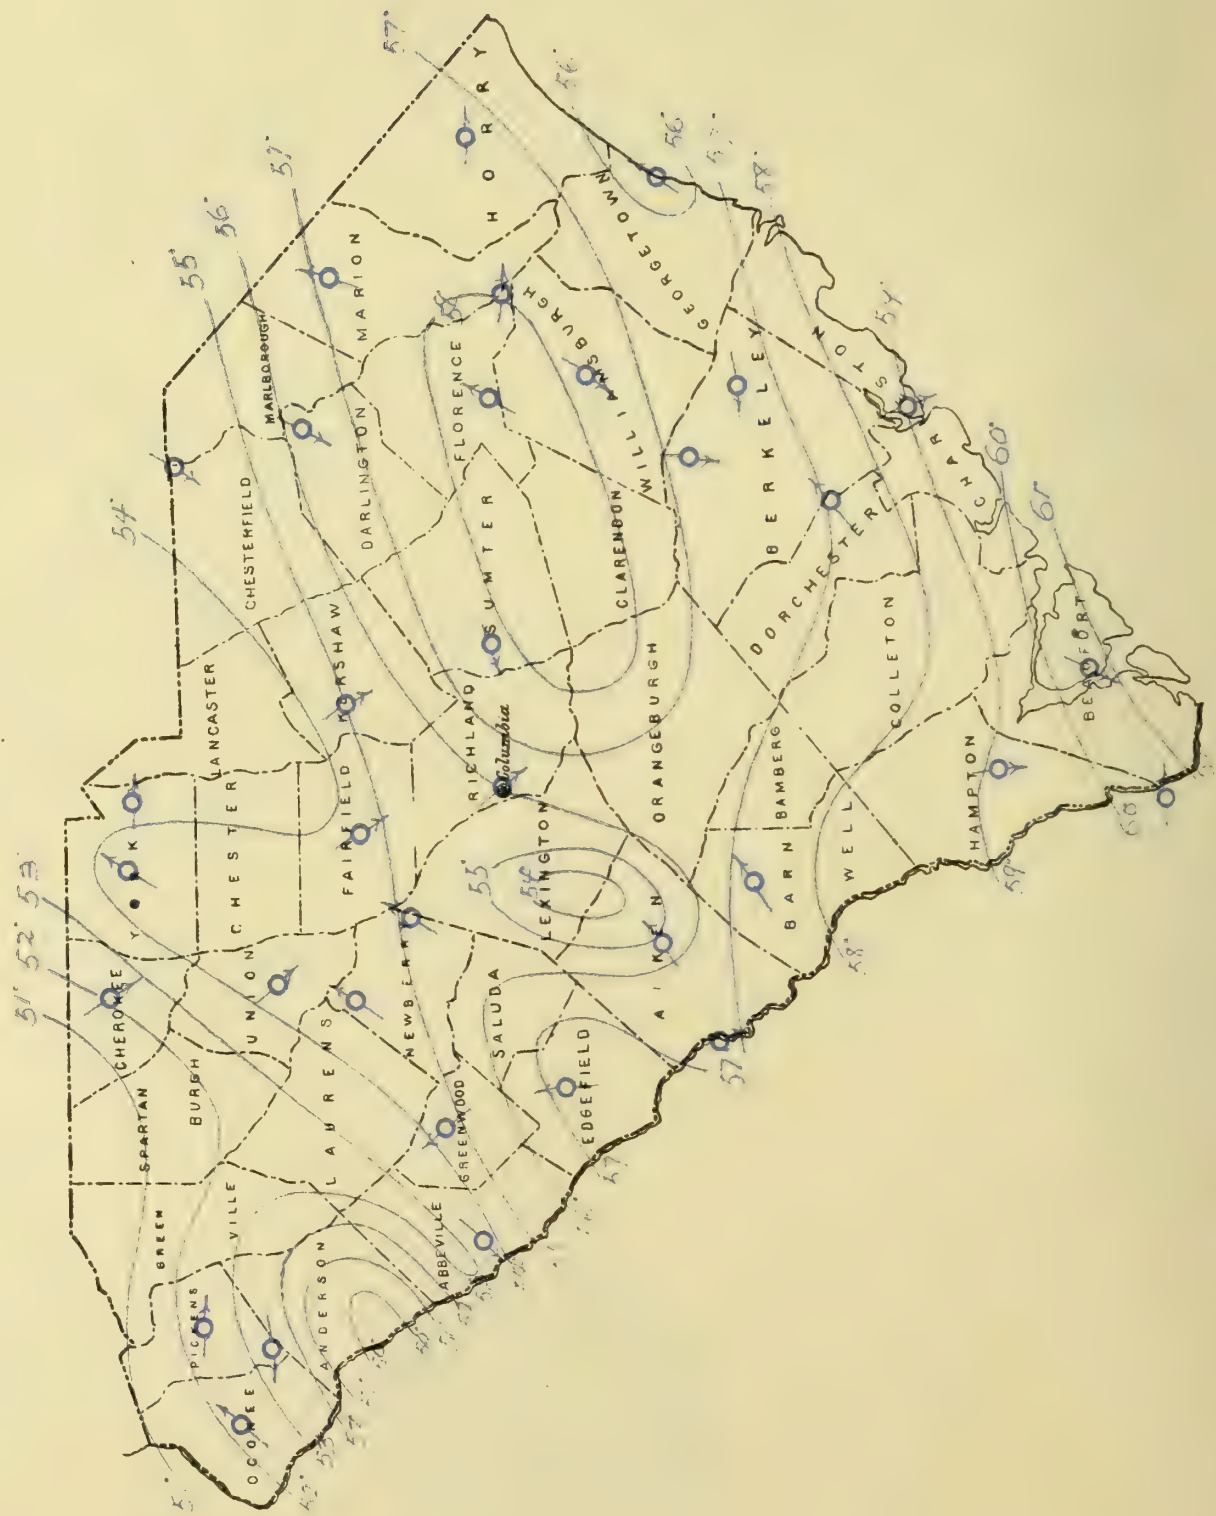

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR NOVEMBER, 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. III. COLUMBIA, S. C., NOVEMBER, 1900. No. 11.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for November, 1900, was 55.6°, which is 1.6° above the normal. The highest local mean was 61.8° at Beaufort, and the lowest local mean was 50.0° at Holland. The highest temperature for the month was 92° at Trial on the 25th, and the lowest temperature for the month was 22° at Holland on the 9th, making the State range 70°. The greatest local monthly range was 67° at Trial, and the least local monthly range was 44° at Charleston. The mean of the daily maximum temperatures was 66.6°, and of the daily minimum temperatures was 44.6°.

Frost, Killing.—The first killing frost of the season occurred at the places and dates named, as follows: On November 8th at Greenville, Holland, Shaws Fork, Summerville, Winthrop College; on November 9th at Augusta, Ga., Batesburg, Blackville, Cheraw, Clemson College, Darlington, Georgetown, Gillisonville, Greenwood, Liberty, Little Mountain, Longshore, Pinopolis, Savannah, Ga., Spartanburg, Statesburg, Trenton, Trial, Walhalla, Winnsboro, Yorkville; on November 10th at Beaufort, Camden, Columbia, Conway, Effingham, Gaffney, Kingstree, St. George, St. Matthews, St. Stephens, Santuc, Smiths Mills, Society Hill, Temperance, Yemassee.

## Precipitation, in Inches.

The State-average precipitation for November, 1900, was 3.32 inches, which is 0.50 in excess of the normal. The greatest local monthly amount was 5.45 inches at Spartanburg, and the least local monthly amount was 1.50 at Georgetown. The greatest 24-hourly fall was 4.05 inches at Charleston on the 3-4th. The average number of days with rain was 6, ranging from 3 at Temperance to 10 at Gaffney.

Excessive Precipitation.—Beaufort, 3-4th, 3.21 inches in 36 hours; Charleston, 3-4th, 4.05 inches in 24 hours; Santuc, 3-4th, 3.21 inches in 24 hours; Smiths Mills, 3-4th, 2.67 inches in 24 hours; Walhalla, 25th, 2.31 inches in 15 hours.

Hail.—Cheraw (2), 25th.

Snow.—Trace at Greenville, 12th, 26th.

Sleet.—Blackville, 12th; Greenville, 26th.

Weather.—The average number of clear days was 13, of partly cloudy days was 8, and of cloudy days was 9.

Winds.—The prevailing direction of the wind was from the southwest at 11 stations, from the northeast at 9 stations, from the northwest at 7 stations, from the west at 5 stations, from the east at 4 stations, from the north at 2 stations, and from the south at 1 station.

High Winds.—Beaufort, 25-26th; Blackville, 26th; Charleston, Walhalla, 8th; Columbia, 4th, 8th, 14th, 24th; Gillisonville, Santuc, 25th; Liberty, 13th, 25th; Shaws Fork, 8th, 25th, 26th; Winthrop College, 21st, 25th.

## MISCELLANEOUS PHENOMENA (with dates).

Sundog.—Beaufort, 29.

Lunar Corona.—Winthrop College, 30.

Solar Halos.—Charleston, 1, 29, 30; Santuc, 17.

Thunderstorms.—Beaufort, 4; Charleston, 3; Cheraw, Longshore, Statesburg, Walhalla, 25.

Lunar Halos.—Beaufort, 7; Charleston, 7, 25, 29, 30; Columbia, 6, 29; Gillisonville, 1, 8, 9; Little Mountain, 28, 29, 30; Santuc, 6, 28, 29; Statesburg, 1, 6, 29; Winthrop College, 28, 29.

Fogs, Dense.—Beaufort, 20; Blackville, 1, 19, 22; Camden, 20, 22, 23, 24, 25; Charleston, 2, 19, 20; Cheraw, Winthrop College, 20, 24; Clemson College, 19, 20, 24; Columbia, 5, 18, 19, 20, 22, 24; Conway, 22; Effingham, 20, 22, 23; Gillisonville, 20, 21, 23; Liberty, 20, 23, 24; Longshore, 19, 20, 21, 22, 23, 24; St. Stephens, 3, 20, 22, 29, 30; Society Hill, 23, 24; Statesburg, 4, 5, 20, 22, 23, 24, 25, 30; Temperance, 19, 20, 21, 22, 23; Walhalla, 18, 19, 20, 23.

## WEATHER AND CROPS.

November averaged warmer than usual, but the range of temperature approached the limits both of extreme warmth and cold. The maximum of 85° at Columbia being the highest in 13 years, while minimum temperatures below 25° are exceptional but occurred at a number of points during this November. Freezing temperature, with ice of varying thickness, was general on the 9th and 10th except over a narrow strip along the immediate coast. After the middle of the month the weather was abnormally warm until near the close when nearly normal temperature prevailed.

The precipitation for November was slightly in excess of the usual amount, and was well distributed over the State. Streams and wells remained low, but the surface soil contained enough moisture to render the ground easily prepared for

sowing fall grains and for quick germination of seed that was sown.

The freezing weather of the 9th and 10th with the subsequent frequent frosts up to the 14th stopped further growth of cotton which, up to the first named date, had continued to bloom and fruit, and also totally destroyed unopened bolls as well as the hope of a top crop. Although a few fields contained small quantities of unpicked cotton at the close of the month, picking was practically finished except for the sea-island variety where a small top crop remained ungathered.

The weather was favorable for thoroughly preparing lands for oats and wheat, and both the temperature and moisture conditions were conducive to quick germination and rapid growth, so that, at the close of the month, excellent stands of both early and late sown grains were the rule.

The reports indicate full acreage of fall oats, and in many localities increased acreage of wheat, while generally the lands received better preparation and more commercial fertilizers than usual. In a few localities hessian flies did some slight damage which was ended by the freeze of the 9th.

Frost during the month did considerable damage to the tender vegetables in the coast-region trucking districts where snap beans, lettuce, peas, radishes, etc., were coming to maturity and being shipped.

The month on the whole was favorable for gathering outstanding crops, and for seasonal farm work.

#### REMARKS BY OBSERVERS.

Longshore.—The frequency of dense fogs was remarkable and noteworthy for this section.—W. G. Peterson.

Society Hill.—Killing frost on the morning of the 10th, which was nearly a month earlier date than last year.—Maj. J. J. Lucas.

Santuc.—On the night of the 25th, as it was clearing after the storm, the wind veered to the northwest and blew with great force all night.—E. W. Jeter.

Little Mountain.—At the end of the month, with few exceptions, wheat has all been sown and much of it had come up to fine stands. Acreage largest since 1883.—John M. Sease, M. D.

Holland.—Cotton picking is about finished, but much of the cotton has not been ginned making it difficult to estimate the yield. Planters are sowing small grain; early sown grain is doing nicely.—Dr. J. W. Earle.

Summerville.—The drop in temperature on the 8th, from 73° to 31°, was unexpected and very sudden and took farmers by surprise. Ice formed on the 8th, 9th, and 12th; no white frost had preceded the ice, something unusual here.—Prof. Jno. Gadsden.

Trenton.—Killing frost on the 9th, with ice one-half inch thick and the ground frozen slightly. Precipitation 3.85 inches, which is 0.96 more than the 8-year average for November, and 7.80 inches deficiency since January 1, 1900. Small grain looks well.—C. A. Long.

Batesburg.—November was a very pleasant month, with a few cool periods giving freezing temperatures that killed all summer crops, including the second crop of cotton. Grain growing nicely, but early in the month was slightly damaged by a fly which the cold weather ended.—E. J. Hite.

Beaufort.—Total precipitation 3.48 inches, all but 0.27 of which fell on 3-4th. Total rainfall 1.23 inches above the normal; mean daily temperature 2° above the normal. The latter portion of the month was very dry. First killing frost on the 10th, which is 25 days earlier than last year.—S. M. Benton.

Gillisonville.—Month very dry, with sudden extreme changes in temperature. First killing frost of the season on the 9th. Many had delayed cutting sugar cane for seed; the effects of the frost on this cannot be estimated until next spring. Large acreage of oats has been planted. Stands are good and have received no injury.—Sam P. Saltus.

Liberty.—Damp and wet weather prevailed, and although there was no excessive rainfall yet the ground was generally too wet to do much plowing. Most of the wheat crop has been sown and is up nicely. Fields sown to oats, rye, and barley look well. Large yield of sweet potatoes, but they lack keeping quality. Cotton crop about all gathered.—John T. Boggs.

#### ERRATA.

Monthly report, October, 1900, on page 5: Kingstree, maximum temperature 85° on the 6th and 7th, should be 86° on the 1st; St. Matthews, maximum temperature 89° on the 22d, should be 90° on the 1st; Shaws Fork, maximum temperature 90° on the 6th, should be 92° on the 1st.

#### NOTES AND COMMENTS

New Forms 1009 have been prepared for issue to voluntary observers. Their exclusive use is to begin on January 1, 1901.

Three stations, Allendale, Edisto, and Florence, have no data for this number of the monthly report. These are the first serious delinquencies for the year. It was hoped that complete reports for every month from every station would be received during 1900.

CLIMATOLOGICAL DATA FOR THE MONTH OF NOVEMBER, 1900.

STATIONS.	Counties.	Elevation—feet.	Length of record—years.	Temperature—in degrees Fahrenheit.						Precipitation—in inches.				Sky.				Observers.		
				Mean.	Departure from the normal.	Highest.	Date.	Lowest.	Date.	Greatest daily range.	Total.	Departure from the normal.	Greatest in 24 hours.	Total snowfall, (unmelted.)	Number rainy days.	Number clear days.	Number partly cloudy days.		Number cloudy days.	Prevailing direction of wind.

WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR DECEMBER, 1900.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,

COLUMBIA, S. C.

VOL. III. COLUMBIA, S. C., DECEMBER, 1900. No. 12.

WEATHER AND CROPS.

There is little activity in farm work during December of a character to be influenced by the weather, except in the truck regions of the southeastern coast section where plowing, planting and gathering vegetables continues throughout the whole year.

The even, comparatively low temperatures that prevailed, and the heavy rainfall, amounting to more than two times the normal amount, and the large number of days with bright sunshine, were conditions favorable to wheat and oats, both of which looked healthy and vigorous at the close of the month.

In the truck regions, preparation of lands and planting for early spring vegetables were actively carried on during the greater portion of the month.

The month was noteworthy for its large number of frosty mornings, few rainy days but with heavy precipitation, and more than the average duration of bright sunshine, and for its light variable winds, the combination making characteristic and pleasant winter weather.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for December, 1900, was 45.5°, which is 1.4° below the normal. The highest local mean was 51.4° at Beaufort, and the lowest local mean was 39.4° at Holland. The highest temperature for the month was 79° at Gillisonville on the 23d; the lowest temperature for the month was 18° at Holland on the 26th, making the State range 61°. The greatest local monthly range was 55° at Gillisonville, and least local monthly range was 36° at Yorkville. The mean of the daily maximum temperatures was 55.6°, and of the daily minimum temperatures 35.4°.

Frost, First Killing.—Charleston, 16th.

Precipitation, in Inches.

The State average precipitation for December, 1900, was 5.64 inches, which is 2.86 inches above the normal, or 204

per centum of the usual amount. The greatest local amount was 8.15 inches at Effingham, and the least local amount was 3.64 inches at Batesburg. The greatest 24-hourly fall was 3.55 inches at Effingham on the 30-31st. The average number of days with rain was 8, ranging from 3 at Allendale and Holland to 11 at Camden, Columbia, Gaffney, Little Mountain, Summerville and Trial.

Excessive Precipitation.—Blackville, 30th, 2.57 in 16 hours and 30 minutes; Effingham, 30-31st, 3.55 in 24 hours; Kingstree, 20th, 2.60 in 24 hours.

Snow.—No snow was recorded during the month at any station.

Hail.—Winthrop College, 4th.

Weather.—Including the entire State, the clear days averaged 14, the partly cloudy 7, and the cloudy days 10.

Winds.—The prevailing direction of the wind was from the north at 12 stations, from the northeast at 10 stations, from the east at 7 stations, from the northwest at 6 stations, from southwest at 5 stations, from the west at 2 stations, and from the south at 1 station.

High Winds.—Beaufort, 3; Blackville, Charleston, Walhalla, 4; Gillisonville, 30.

MISCELLANEOUS PHENOMENA (with dates).

Sundog.—Trenton, 19.

Solar Halos.—Charleston, 6, 10, 12, 13, 15, 17, 22, 27; Santuc, 6, 12, 27; Shaws Fork, 17; Statesburg, 19, Walhalla, 12.

Lunar Halos.—Blackville, Little Mountain, Walhalla, 2; Charleston, 2, 5, 6, 9, 10, 27, 31; Columbia, 1, 2, 27, 31; Gillisonville, 27; Santuc, 2, 27; Shaws Fork, 29; Statesburg, 2, 3, 5, 7; Winthrop College, 1, 2, 5, 27, 28.

Thunderstorms.—Beaufort, Charleston, Columbia, Longshore, Shaws Fork, Statesburg, 23; Blackville, Gillisonville, Trial, 23, 30; Camden, 24; Little Mountain, 20; Smiths Mills, 31.

Fogs, Dense.—Beaufort, 20; Blackville, Columbia, 31; Charleston, 20, 23, 24, 30; Gillisonville, Walhalla, 30; Greenville, 22, 23, 31; Liberty, 23, 31; St. Stephens, 6; Statesburg, 23, 24, 31; Winthrop College, 24, 31.

REMARKS BY OBSERVERS.

Batesburg.—All winter crops are growing nicely.—E. J. Hite.

Yorkville.—Abnormally mild and pleasant December weather.—J. R. Schorb.

Florence.—Observations were not taken during the first 17 days as both thermometers were unserviceable.—H. K. Gilbert.

Beaufort.—The mean temperature for December was  $2.8^{\circ}$  below the normal; total precipitation was 1.50 inches above.—S. M. Benton.

Summerville.—Ice formed on the 1st, 14th, 15th, 16th, 17th, 25th and 26th. The average per centum of relative humidity was 80.—Prof. John Gadsden.

Clemson College.—On account of an error made by an acting voluntary observer, the observations from the 24th to the 31st are omitted.—Prof. C. C. Newman.

Liberty.—The month was noteworthy for the number of hoar frosts. Small grain crops look well. More plowing was accomplished during the month than usual.—John T. Boggs.

Gillisonville.—Month moderately cold, with rains at such intervals and in such amounts as to make them favorable to grain crops which at present have a healthy outlook.—Sam P. Saltus.

Trenton.—The precipitation was 2.86 inches more than the 8-year average for December, and is five inches less than the 7-year average for the 12 months of the year. Small grain is doing well.—C. A. Long.

Santuc.—The month was noteworthy for the number of white frosts on consecutive days; most of them were not followed immediately by rain, as usual. Nearly every rain for the month began at night and after midnight.—E. W. Jeter.

Winthrop College.—The corona of the 1st was of strikingly pure and brilliant colors; violet clearly defined, although faint on outer border. The storm of 3d-4th cleared off with a heavy black cloud from which a small quantity of fine hail was observed falling.—Dr. Cleveland Abbe, Jr.

#### NOTES AND COMMENTS

The voluntary observers' necrology is a blank for the year 1900.

No voluntary observers stations were closed during the year, and since January but one new station has been opened—McColl, in Marlboro county—whose first regular report appears in this issue.

Calhoun Falls and Georgetown reports were received too late to be used in the means and summary for December.

No reports have been received from Temperance and Yemassee, which accounts for the omission of the data for those stations.

On January 1, 1901, the centigrade thermometer scale was adopted as the official standard of the German empire, discontinuing entirely the use of the Reaumer scale. It is probable that the latter will gradually fall into complete disuse, and that eventually the centigrade scale will also supersede the Fahrenheit wherever the latter is now being used.

The inquiry is frequently made whether it is necessary to keep a record of the occurrence of frost during the winter months. While it is not likely that frosts do much, if any, injury to crops cultivated in South Carolina, especially winter wheat and oats, during December, January and February, except possibly in the extreme southeastern portion of the State where truck farms raising winter vegetables are located, yet as it requires so little time to note the occurrence of frost on Form 1009, voluntary observers are advised to do so, particularly after February 1st. It is better to have too much than too little data. The former can be neglected, the latter can never be supplied.

The opening of the 20th century ought to mark the beginning of important discoveries in meteorology. The civilized world is dotted with meteorological stations, many of them equipped with all the latest and best forms of instruments for recording the principal meteorological phenomena, leaving but little to the personal acuteness and alertness of the individual observer, and thus eliminating fruitful sources of errors both of omission and of judgment.

There is, in the United States, a small army of intelligent observers, regular and voluntary, constantly watchful to observe and to record the slightest variation in the weather. Their records, added to what is already at hand, will establish the climatic features of this country in their minutest detail.

Rapid progress ought now be made in the science of meteorology. There are records for comparison, data for study, and minds for both. Systematic research joined to constant observation, by men fitted by education, training and experience for this work, ought, before the new century is far advanced, to increase our knowledge of the laws that not only govern but create storms, and that control the visitations of heat-waves, cold-waves, droughts and floods. Afterwards the practical application of this knowledge to making forecasts of the weather for months and even seasons will follow.

#### ERRATA.

November report, on page 5, Little Mountain, mean temperature  $55.3^{\circ}$ , should be  $55.4^{\circ}$ . Same page, Society Hill, mean temperature  $54.9^{\circ}$ , should be  $54.7^{\circ}$ .

## CLIMATOLOGICAL DATA FOR THE MONTH OF DECEMBER, 1900.

REPORT FOR JANUARY, 1901.

---

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

---

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

---

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JANUARY, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., JANUARY, 1901.

No. 1.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for the month of January, 1901, was  $45.1^{\circ}$ , which is  $0.5^{\circ}$  above the normal. The highest local mean was  $50.8^{\circ}$  at Beaufort, and the lowest local mean was  $40.4^{\circ}$  at Spartanburg. The highest temperature for the month was  $81^{\circ}$  at Trial on the 10th, and the lowest was  $18^{\circ}$  at Liberty on the 26th, making the State range  $63^{\circ}$ . The greatest local monthly range was  $60^{\circ}$  at Trial, and the least monthly local range was  $39^{\circ}$  at Georgetown. The mean of the daily maximum temperatures was  $55.3^{\circ}$ , and of the daily minimum temperatures was  $34.9^{\circ}$ .

## Precipitation, in Inches.

The average precipitation for January, 1901, was 3.55 inches, which is 0.10 below the normal. The greatest local monthly amount was 5.60 inches at Liberty, and the least local monthly amount was 1.20 inches at Pinopolis. The greatest 24-hourly fall was 2.92 inches at Liberty on the 10th. The average number of days with rain was 9, ranging from 4 at Winnsboro to 13 at Calhoun Falls and Longshore.

Excessive Precipitation.—Clemson College, 10-11th, 3.92 in 31 hours; Greenville, 10-11th, 3.72 in about 32 hours; Liberty, 10-11th, 4.17 in 36 hours; Temperance, 1-2d, 2.90 in 33 hours; Walhalla, 10-11th, 4.32 in about 36 hours.

Snow.—Trace of snow fell on the 3d at McColl; on the 17th at Effingham, Florence, Little Mountain, Smith's Mills and Temperance; on the 18th at Society Hill; on the 26th at Santuc, and on the 27th at Walhalla. No measureable amount of snow fell during the month.

Hail.—On the 27th hail fell at Cheraw, Darlington, Effingham, Florence and McColl.

Sleet.—On the 17th at Effingham; on the 27th at Longshore, and on the 29th at Spartanburg and Walhalla.

Weather.—Average number of clear days in January 14, partly cloudy days 7, cloudy days 10.

Winds.—The prevailing direction of the wind was from the north and northwest at 11 stations each, from the west at 9

stations, from the southwest at 7 stations, from the northeast at 4 stations, from the east at 3 stations, and from the south at 1 station.

High Winds.—Beaufort, Charleston, Florence and Statesburg, 25; Blackville, 27; Columbia, 24, 25; Gillisonville, Liberty and Longshore, 25, 27, 28; Shaw's Fork, 18, 27; Walhalla, 11, 17, 18, 19, 24, 25, 27; Yorkville, 26.

## DR. J. W. EARLE.

Dr. J. W. Earle, voluntary observer at Holland, Anderson County, died on February 1, 1901, aged 73 years. His death was caused by pneumonia after an illness of eleven days. Dr. Earle began his connection with the Weather Bureau as a voluntary observer and climate and crop correspondent in 1888, at Evergreen, Anderson County, and continued to act in both capacities up to the time of his last sickness.

His weekly reports as a climate and crop correspondent were models. His habits of close observation, and his long experience and keen, discriminating judgment associated with a condition of mind free from bias and prejudice, enabled him to state conditions with comprehensive fullness and at the same time with appropriate brevity, while his deductions and conclusions were marked by almost unfailing accuracy.

Dr. Earle's personality was pleasing and attractive, and his death is a loss to both the community in which he lived and to this service.

## CLIMATE AND CROPS.

During January, 1901, both the temperature and precipitation approximated their respective normals in South Carolina. At exactly half the number of reporting stations for which normals have been deduced, the mean temperature averaged above their normals, and this irrespective of the location of the station. There were neither severe cold nor unusually warm periods, but the temperature variations were moderate and gradual. There were a few ground freezes with thin ice formation, but there was little or no "heaving" of wheat and oats lands.

The precipitation was unusually well distributed both geographically over the State and throughout the month, there having been four general rainy periods and two additional showery ones. Fourteen stations for which normals are available had amounts slightly in excess of their normals, and seventeen had amounts below their normals. Over the extreme western portion only was there excessive precipitation, and there were slight deficiencies over portions of the east central and north border counties. The nature of the rains were such that the greater portion of the rainfall was absorbed as it fell and conserved by the soil. Flurries of snow were observed at a few points and on several dates, but the snow melted as it fell.

The ground was generally too wet to plow, and little or no spring oats were sown. Wheat and oats were not injured by the weather, and were in good condition at the close of the

month. Some country roads became almost impassable for loaded vehicles, but as a rule roads were in fairly good condition.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Corona.—Columbia, 28, 31; Walhalla, 28.

Lunar Halos.—Gillisonville, 31; Statesburg, 23.

Solar Halos.—Charleston, 7, 12, 21, 26; Santuc, 7, 15; Statesburg, 7, 26.

Thunderstorms.—Cheraw, Darlington, Effingham, Florence, McColl, Smith's Mills, Society Hill, Statesburg and Temperance, 27; Gillisonville, 30; Longshore, 9.

Fogs, Dense.—Beaufort, Blackville, Camden, Charleston, Cheraw, Conway and Yorkville, 10; Clemson College, Walhalla, 22; Columbia, 10, 14; Liberty, 10, 22, 24, 31; Little Mountain, 1, 23; McColl, 8, 9, 24, 30.

#### EDITORIAL NOTES.

Full or partial reports were received from all stations for January except Allendale, from which point no report was received.

The recent death of Dr. J. W. Earle, voluntary observer at Holland, will not necessitate closing that station, as Mrs. J. Hanks has very kindly offered to continue the observations at that place, and her generous offer has been gladly accepted.

The local Weather Bureau office at Columbia has been removed from the Federal building to the new City Hall, on the corner of Main and Gervais streets, where commodious quarters have been secured.

The new office will shortly be supplied with a complete outfit of self-recording meteorological instruments. Voluntary observers, crop correspondents, displaymen and others interested in the work of the Weather Bureau, are cordially invited to visit the office of the Section Director when they come to Columbia, and inspect the workings of a fully equipped Weather Bureau station.

Teachers and students will find such a visit exceedingly profitable in noting the methods of recording and collecting the data upon which the daily forecasts of the weather are based, and in learning the use of the daily weather maps, as well as in the study of meteorology and climatology.

After the instruments have been installed it will be possible to secure continuous records of the air pressure, air temperature, rainfall, sunshine, and wind direction and velocity. These instruments of themselves will be well worth seeing.

A comparison between the annual report of this section and a number of others that have been received, emphasizes the favorable climatic features of South Carolina, especially

in being free from the extremes of both heat and cold, which characterize other portions of the United States.

In New England the temperature for the year 1900 ranged between a maximum of  $101^{\circ}$  and a minimum of  $30^{\circ}$  below zero. In the middle states and Ohio valley, the maximum rose to above  $100^{\circ}$  on various dates, and the extreme minimum was  $34^{\circ}$  below zero. In the central Mississippi valley the range was between  $111^{\circ}$  and  $19^{\circ}$  below zero, while in Minnesota the lowest minimum was  $45^{\circ}$  below zero. This was the coldest weather which the reports at hand show for the year. The same State had a maximum temperature of  $103^{\circ}$ . The highest temperature in the northwestern group of states was  $116^{\circ}$  at Butte Creek, Wyoming, on June 26, and July 12, and the same State had a minimum of  $36^{\circ}$  below zero, making the range for the year  $152^{\circ}$ , and this was  $7^{\circ}$  less than the annual range in 1899.

South of the 36th parallel of latitude and east of the Mississippi, the conditions were more equable, and the annual range was generally below  $100^{\circ}$ .

#### REMARKS BY OBSERVERS.

Longshore.—The weather during January was splendid, and there was no snow. Small grain is in fine condition.—W. G. Peterson.

Beaufort.—Mean temperature during January was  $3^{\circ}$  above the normal, and the precipitation was 0.62 in excess.—S. M. Benton.

Summerville.—The relative humidity averaged 73 per centum for the month. My hygrometer is elevated about 12 feet above the ground.—Prof. John Gadsden.

Trenton.—Precipitation 0.06 inch less than the 8-year average for January. Small grains are doing well. Some plowing has been done.—A. C. Long.

Santuc.—The month was generally mild and favorable on small grain. On the 10th a bat was seen flying about, and a snake was observed on the 15th. Both days were very mild.—E. W. Jeter.

Batesburg.—January was the first month this season with wintery weather. Farm work being vigorously prosecuted, such as breaking lands and preparing them for spring planting.—E. J. Hite.

Gillisonville.—January was a pleasant month. The light rains were favorable for field work except on very low lands, where it was too wet. Grain crops are in good condition.—Sam P. Saltus.

Liberty.—Plowing was practicable on only 5 or 6 days during January, owing to the soil being either too wet or frozen. There was no extreme weather of any kind during the month, except a few days with unusually high winds. There was an unusual amount of westerly winds.—John T. Bogg.

VOL. VI. RALEIGH, N. C., FEBRUARY, 1901.

No. 2.

## THE FARMER AND THE WEATHER.

Paper read at Annual Convention of Cotton States Association of Commissioners of Agriculture, at Raleigh, August 30, 1900. (Commenced in January issue.)

The development of the practical part of meteorology—weather forecasting—has depended largely upon the spread of the electric telegraph. How was the discovery made that the apparently haphazard changes in the weather could be foretold? The idea soon occurred to students of the subject that, by taking weather observations at many stations over an extended area at precisely the same moment of time, and charting the results upon a map, a picture could be obtained of existing conditions, while successive maps would show the changes ever occurring in the immense panorama of the weather. The first weather maps were published in 1820 by Prof. H. W. Brandes of Leipzig, from a study of the voluminous records published by the Meteorological Society of the Palatinate, at Mannheim, Germany. The study of the maps led to a true understanding of the mechanics of the atmosphere and the laws of storms. Americans have been pioneers in the advancement of this branch of meteorological science, and in a brief sketch it is impossible to do more than refer to the labors of such distinguished men as Espy, Henry, Redfield, Loomis, and Ferrel. After the rapid introduction of the telegraph throughout the United States in 1848, the compilation of weather maps from simultaneous observations at many stations was carried on by Prof. Joseph Henry, at the Smithsonian Institute, where charts were displayed daily from 1856 to 1861, and forecasts were made for the benefit of Congressmen and others. In France daily weather maps began to be published in 1863 and in most other European countries soon afterward. In the United States the work was taken up again after the war by Prof. Cleveland Abbe, then (1868) director of the Cincinnati Observatory, and one of the most accomplished meteorologists of our time; but the great importance of the matter to the country at large was becoming widely recognized, and the magnitude and cost of the work required that it should be undertaken by the National Government. Accordingly, acting upon petitions presented by prominent individuals, scientific societies, and boards of trade throughout the country, Congress, in 1870, passed a joint

resolution which authorized the issue of storm and weather predictions and placed the matter under the control of the Signal Service of the United States Army. The successive chiefs of the Weather Bureau while it remained under military control were Generals A. J. Myer, W. B. Hazen, and A. W. Greely. Established at first chiefly in the interest of commerce, the growing recognition of the great benefit of the service to agriculture led to its transfer in July, 1891, from the War Department to the Department of Agriculture, with Prof. M. W. Harrington as first civilian chief. In 1895 Prof. Willis L. Moore was appointed chief of the bureau in acknowledgement of his meritorious services as a member of the corps.

Every country in the civilized world now has a weather service. The Weather Bureau of the United States is unique in the magnitude and precision of its operations, the extent of territory covered, and the benefits it confers upon the people. Improvements during the last decade have been marked. The present Secretary of Agriculture has been a firm friend of the Weather Bureau and under his directions the operations of the service have been widely extended. The Caribbean Sea has been surrounded by a cordon of stations so that no hurricanes may approach the Gulf or Atlantic coast unheralded; cooperation with the services of Canada and Mexico has been made closer; the number of observing stations in the south and west has been increased; a corn and wheat region service has been established in the northwest, similar to the cotton region service in the south, and finally the local climate and crop services have been furnished with improved printing appliances to secure uniformity in the style of the various publications.

The Weather Bureau has been in existence thirty years, and it would appear reasonable to assume that there can be no lack of knowledge of its aims and methods, yet it is surprising how many people still think that weather observers use telescopes and derive their information from the stars. If anything has been definitely settled by the meteorologists it is that neither the moon, the planets, nor the fixed stars have any appreciable influence on the weather. Long range forecasts pretended to be based upon the conjunction of the planets, eclipses, or other astronomical phenomena are downright and purposely fraudulent. A knowledge of the actual operations of the Weather Bureau and the method of making forecasts will reveal the falsity of the idea. Stations of the Weather Bureau are equipped only with instruments for observing and measuring the elements of the weather. The most important instruments are: the barometer, which measures the weight of the air; thermometers, for observing exposed, maximum and minimum, and wet-bulb temperatures; rain and snow gauges; anemometers, for measuring wind velocities, and wind vanes. Many of the self-recording instruments are marvels of ingenuity. There are over 150 stations of the Weather Bureau so equipped, situated within the limits of the United States. Observations of the weather are taken daily at 8 in the morning and at 8 at night, simultaneously throughout the country, and are telegraphed promptly to the Central Office of the service at Washington, D. C., and to most of the

larger cities. By an ingenious cypher-code the data of each observation, which ordinarily expressed would require from 25 to 30 words, are contracted to a limit of 5 or 6 words, thus greatly reducing the cost of the telegrams and expediting their transmission. By arrangements with the telegraph companies special wires are placed at the disposal of the Weather Bureau morning and evening, and a system of circuits accomplishes the remarkable result that telegrams from all of these 150 stations, scattered from Maine to Florida and from Texas to the Pacific coast, are received at Washington and many larger cities of the country within one hour after the observations are taken.

## CLIMATOLOGY FOR THE MONTH.

## General Remarks.

The pressure, temperature, and precipitation for February, 1901, were all considerably below the normal, but the large number of fine, clear days, and the absence of long periods of rainy weather made the month far from disagreeable. However, the mean temperature this month, 38°, is lower than the mean for any February since 1872, excepting only in 1895 (32°) and 1899 (36°). In spite of a deficiency of over 5°, the month was not characterized by exceptionally low minimum temperatures, but rather by the absence of the unusual periods of warm weather, excepting one of short duration about the 18th. Three or four barometric depressions influenced the weather in North Carolina sufficiently to produce precipitation, which occurred on the 3d and 4th, 8th to 12th, and on the 23d. February in 1877 and 1898 only were drier than the present month, with its small average of 1.93 inches. The area of low barometer which appeared over Texas on the morning of the 22d and moved to northern Florida the morning of the 23d, in conjunction with the cold wave prevailing in the central valley caused a unique snowstorm in eastern North Carolina on the 23d. The largest amount of unmelted snow was 9 inches, extending over the southeast section from Washington through Newbern to Wilmington, whence the depth diminished rapidly westward to about one inch at Charlotte, and none in the mountain districts. Severe cold followed the storm, with the lowest temperature for the entire winter generally on the 24th.

Conditions were rather unfavorable for winter wheat, which was considerably injured by alternate freezing and thawing. The drought also prevented spreading, so that the condition of the crop at the end of February was backward. Some correspondents, however, attribute most of the damage to the ravages of the hessian fly in the early part of the season. Not enough winter wheat has been killed to prevent good stands when growth starts. Preparations for truck crops became active the latter part of February. Strawberries appear to be late and the crop below the average.

## Temperature, in Degrees Fahrenheit.

The monthly mean for the State was 38.1°, which is 5.2° below normal. Means by districts: Eastern, 39.6°; Central, 38.3°; Western, 36.5°.

The highest monthly mean was 43.8° at Southport; the lowest, 29.2° at Linville.

The highest absolute temperature was 77° on the 18th at Newbern; the lowest was 3° on the 24th at Flat Rock, giving a range of 74° for the State.

The greatest daily range was 45° at Weldon on the 22d.

The mean temperature was below normal at all stations; the greatest deficiencies occurred in the central-east portion, the least in the northwest. The departure exceeded -5° at 14 stations.

## Precipitation, in Inches.

The average for the State was 1.93 inches, which is 2.41 inches below the normal. Averages by districts: Eastern, 2.37 inches; Central, 1.53; Western, 1.88.

The greatest monthly total was 4.39 inches at Sloan; the least, 0.68, at Louisburg.

Amounts of precipitation exceeding 2 inches in 24 hours: Linville 2.35 on the 9th.

The average snowfall (unmelted) was 3.2 inches. By Districts: Eastern 6.1, Central 2.3, and Western 1.1. The largest total was 9 inches at Newbern and Wilmington.

The precipitation was below normal at every station except Southport.

## Wind.

The prevailing direction of the wind was northwest. The average hourly velocity, 9.2 miles.

## Weather.

Average number of clear days 16, partly cloudy days 6, cloudy days 6, and rainy days 5.

## MISCELLANEOUS PHENOMENA (with dates).

Snow in small amounts occurred, chiefly in the north and west, on the following dates: 2, 3, 4, 7, 8, 11, 20, 22, and throughout the east on the 23d.

SLEET: Flat Rock, Hendersonville, 3; Kinston, 26; Littleton, Oak Ridge, 7; Raleigh, 11; Roxboro, 8; Southport, 23; Settle, 3, 7, 11; Tarboro, 11; Washington, 26.

Fog: Hatteras, Oak Ridge, 9; Raleigh, 2, 7, 8, 9, 22.

HAZE: Charlotte, 27; Hatteras, 10; Marion, 9, 10, 28; Raleigh, 16; Washington, 15, 17.

SMOKE: Charlotte, 6, 18, 28; Raleigh, 27; Sloan, 22; Waynesville, 28.

HALOS, LUNAR: Brewers, Charlotte, Highlands, Kinston, Marion, Oak Ridge, Raleigh, Settle, Wilmington, 25; Charlotte, Highlands, Kinston, Wilmington, 28; Marion (lunar corona), 23; Saxon, 23; Waynesville, 26, 27.

HALOS, SOLAR: Charlotte, 7, 15, 17, 27; Raleigh, 7; Marion (solar coronæ), 22, 28.

GALES: Generally on 3d to 5th, 12th to 14th, 23d and 24th.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR MARCH 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., MARCH, 1901.

No. 3.

## CLIMATE AND CROPS.

The month of March, 1901, averaged slightly cooler than usual, and was noteworthy for its rapid temperature fluctuations. The difference between the mean temperature of the 5th and 6th averaged about 30°, and on various other dates the changes from day to day ranged from 8° to 15°. There were three distinct cold periods: the first, in the nature of a cold wave, crossed the State on the 6th, and occasioned minimum temperatures on the morning of the 7th as low, or lower, than have ever been recorded during any previous March, with freezing temperatures to the coast. The second period occurred on the 17th, with freezing temperatures to within 50 miles, or less, of the coast, and with killing frost over the whole State. The third period occurred on the 22d, with freezing temperatures over the western half of the State, and heavy frost to the coast.

There was slightly more than the average amount of bright sunshine, and there were many windy days, with the prevailing winds westerly to southerly.

The precipitation was excessive over the extreme western portion, where localities had double the usual amount, with decreasing amounts toward the south, central, and southeastern counties, where there were slight deficiencies. Although there was a general rain on the 10th, the month was dry up to the 20th, after which date rains were frequent, and heavy on the 25-26th causing floods in the up-country streams, and damaging plowed lands and terraced hillsides.

These conditions were favorable to the preparation of lands for planting up to the 20th, and general farm work had made rapid progress being at that date further advanced than usual, but the wet weather after the 20th delayed seeding operations, so that less corn, cotton, and minor crops were actually planted by the close of the month than is usual to the season.

Germination was slow and unsatisfactory owing to the coldness of the soil. Vegetation was backward, and trees that are usually in full leafage early in March were scarcely showing green at the close of the month. Fruit trees were also

late in blooming, and this, no doubt, giving them immunity from the freezing weather of the first and second decades, so that the fruit prospects were unimpaired or only slightly injured.

Wheat and fall sown oats made but little growth, although otherwise promising. The freeze on the 6th and 7th damaged oats in places. The prevailing weather was too cold for the best interest of the coast truck raisers, and the growth of truck is from one to two weeks later than usual.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for the month of March, 1901, was 53.4°, which is 1.3° below the normal. The highest local mean was 56.8° at Beaufort; the lowest 47.7° at Greenville. The highest temperature for the month was 86° at Gillisonville on the 25th; the lowest 10° at Liberty on the 7th, making the State range 76°. The greatest local monthly range was 67° at Gillisonville, the least 50° at Charleston. The mean of the daily maximum temperatures was 64.9°; of the daily minimum temperatures 41.9°.

Frosts, Killing.—Killing frosts were general over the State on the 6-7-17th, and over the central and western portions on the 22d.

Precipitation, in Inches.

The average precipitation for March, 1901, was 4.36 inches, which is 0.80 of an inch above the normal. The greatest local monthly amount was 8.68 inches at Greenville and Liberty; the least 2.27 inches at Pinopolis and Yemassee. The greatest 24-hourly fall was 6.71 inches at Yorkville on the 25-26th. The average number of days with rain was 8 ranging from 4 at Georgetown to 12 at Charleston and Columbia.

Excessive Precipitation.—On 25th: Clemson College, 2.80 in 12 hours; Darlington, 2.75 in 24 hours; Society Hill, 2.55 in 24 hours; Winnsboro, 2.50 in 24 hours. On 25-26th: Batesburg, 2.55 in 21 hours; Calhoun Falls, 3.99 in 24 hours; Camden, 5.09 in 24 hours; Cheraw, 2.91 in 18 hours; Columbia, 2.83 in 25 hours; Gaffney, 2.58 in 24 hours; Greenville, 5.35 in 24 hours; Greenwood, 3.12 in 19 hours; Liberty, 3.94 in 16 hours; Little Mountain, 2.88 in 21 hours; Longshore, 3.07 in 24 hours; Santuc, 3.54 in 24 hours; Spartanburg, 4.39 in 18 hours 30 minutes; Walhalla, 5.47 in 20 hours 30 minutes; Winthrop College, 3.87 in 19 hours; Yorkville, 6.71 in 24 hours.

Snow.—Walhalla, trace on 15th.

Sleet.—Walhalla, trace on 1st.

Hail.—Clemson College, 10th; Darlington, Spartanburg, Yorkville, 25th; Liberty, 9-25th; Longshore, 26th; Shaws Fork, 14-25th.

Weather.—Average number of clear days 14, of partly cloudy days 8, and of cloudy days 9.

Winds.—The prevailing direction of the wind was from the southwest at 20 stations, from the west at 11 stations, from the south at 8 stations, from the northwest at 4 stations, and from the east at 1 station.

High Winds.—Beaufort, 9, 10, 20; Blackville, 5, 10; Charleston, 26; Columbia, 5, 11, 26; Darlington, 25 (tornado); Gillisonville, 4, 8, 9, 10, 11, 27; Liberty, 11, 13, 14, 31; Little Mountain, Trenton, 11; Longshore, 5, 11, 21, 25; Shaws Fork, 5, 11, 16; Statesburg, 10; Walhalla, 3, 5, 11, 13, 14, 15, 16, 18, 19, 20, 21, 26, 27.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Corona.—Santuc, 17.

Parhelio.—Longshore, 24; Santuc, 23, 29.

Solar Halos.—Charleston, 1, 9, 10, 12, 13, 19, 25; Santuc, 17.

Lunar Halos.—Blackville, Shaws Fork, Statesburg, 1; Charleston, 12; Gillisonville, 4, 25, 29; Little Mountain, 1, 5.

Fogs, Dense.—Gillisonville, 2; Liberty, 24, 25; Statesburg, 25.

Thunderstorms.—Beaufort, 10, 23, 25, 30; Blackville, 10, 25, 26, 30; Charleston, 10, 20, 25; Cheraw, Columbia, Greenville, Liberty, Longshore, Statesburg, Trenton, Winthrop College, 10, 25, 26; Darlington, McColl, Temperance, 25; Gillisonville, 10, 13, 25, 26, 30; Little Mountain, Trial, 10; Shaws Fork, 14, 25, 26; Smiths Mills, 10, 21, 25, 26; Society Hill, Walhalla, 10, 25; Spartanburg, 25, 26; Yorkville, 10, 11, 25, 26.

#### ERRATA.

In January monthly report, on page 5, St. George, total precipitation, 2.83, should be 3.22; on page 8, St. George, precipitation on the 31st, 0.22, should be 0.62, and the total, 2.83, should be 3.22.

#### REMARKS BY OBSERVERS.

Summerville.—Mean relative humidity for March 68 per centum. Prof. Jno. Gadsden.

Walhalla.—On the 25th there was 0.50 inch of rain in 25 minutes, and 1.20 inches in 30 minutes.—S. M. Pagan.

Shaws Fork.—First whippoor-will heard on the 29th. First sand-flies appeared on the 19th. Considerable early corn planted during the month.—Geo. H. Atwood.

Batesburg.—It was very windy during the first part of the month, although favorable for farm work, which made rapid progress.—E. J. Hite.

Longshore.—First peach bloom on the 12th. Sundogs on

the 24th. On the 25th there was a heavy rain, with hail. A tornado passed north of station.—W. G. Peterson.

Winthrop College.—Most of the precipitation on the 25th (1.18) fell between 4.20 and 5.00 p. m. During the night of the 25-26th there was a great deal of lightning and some thunder.—Dr. Cleveland Abbe, Jr.

Santuc.—The severe cold on the 6th and 7th killed many fall oats, and destroyed the vitality of many germinating spring oats. The rains of the 25-26th damaged both uplands and bottomlands.—E. W. Jeter.

Darlington.—On the 25th there was a tornado about three miles northwest of Darlington, that was very destructive, and that blew down a number of trees and a number of houses, and injured six people, one of whom was killed.—E. R. McIver.

Greenville.—Thunder and rain at 9.30 a. m., and again at 6 p. m., on the 10th. Much thunder and hail, with dense fog, in the evening of the 25th. The thunder was continuous from 2 to 8 p. m. Three inches of rain fell in three hours.—Mrs. S. A. Crittenden.

Trenton.—Fair prospects for a fruit crop at the end of March. Small grain is doing well. Precipitation 0.10 inch less than the 8-year average for March, and 3.38 inches less than the 8-year average for the first 3 months of the year.—C. A. Long.

Liberty.—Farm work was well advanced until the 10th; after that date but little plowing was done. But little corn has been planted. Peaches are not yet in full bloom, but fruit prospects are good. Wheat and oats are growing rapidly. Land were badly washed on the 25th.—Jno. T. Boggs.

Spartanburg.—The heavy rain on the 25th, began at 2.30 p. m. and continued all afternoon and ended by 8 a. m. of 26th. The rainfall during this time amounted to 4.35 inches. At 3.40 p. m. hail fell for about 10 minutes. There was vivid lightning during the storm.—F. P. Robinson.

Gillisonville.—Two-thirds of the month unfavorable, it having been cold, wet, and with frequent high, cold winds. The major portion of corn, sugar cane, and potatoes has been planted. Peach, pear, and plum trees in full bloom. Grain looks promising. All field work well advanced and soil in fair condition.—Sam P. Saltus.

Beaufort.—Mean temperature about normal. Precipitation 0.87 below normal, but was so divided that it was sufficient. Early truck looks well, but is later than usual. General crops are already planted or are being planted. First blooms noted as follows: 11th, peaches; 13th, jassamine; 22d, peas; 27th, blackberries.—S. M. Benton.

REPORT FOR APRIL, 1901.

---

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

---

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

---

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR APRIL, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., APRIL, 1901.

No. 4.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for the month of April, 1901, was 56.0°, which is 6.2° below the normal. The highest local mean was 60.5° at Beaufort; the lowest 51.7° at Greenville. The highest temperature was 89° at Spartanburg on the 30th; the lowest 30° at Liberty on the 4th, making the State range 59°. The greatest local range was 57° at Clemson College; the least 33° at Charleston. The mean of the daily maximum temperatures was 66.5°; of the daily minimum temperatures 45.4°.

Frosts, Killing.—Liberty 4th, McColl 24th, Shaw's Fork, Longshore, Trial 22d.

Frosts, Light.—Batesburg, Gillisonville 22d, Blackville 8th, Camden, Cheraw, Conway, Edisto, Effingham, Gaffney, Kingstree, St. George, St. Matthews, St. Stephens, Smith Mills, Yemassee 22-29th, Charleston, Statesburg 4-22d, Clemson College 8-11-23-24th, Columbia 4th, Liberty, Yorkville 24th, Little Mountain 2-4-10-22-28th, Longshore 4-7-8-9-10-15-16-24-25-26th, McColl 12-25-29th, Trenton 4-24th, Temperance 7-8-9-10-11th.

## Precipitation, in Inches.

The average precipitation was 5.03 inches, which is 2.00 inches above the normal. The greatest local amount was 10.58 inches at Yorkville; the least 1.64 inches at Charleston. The greatest 24-hourly fall was 4.34 inches at Yorkville on the 19th. The average number of days with rain was 7, ranging from 3 at Beaufort and Gillisonville to 11 at Camden and Columbia.

Excessive Precipitation.—Batesburg, 19-20th, 2.95 in 12 hours; Calhoun Falls, 1-2d, 4.14 in 30 hours; Camden, 20-21st, 3.42 in 24 hours; Effingham, 2-3d, 2.90 in 24 hours; Gillisonville, 2d, 1.18 in 3.45 hours; Greenville, 1-2d, 3.48 in 27 hours; Greenwood, 1-2d, 3.26 in 32 hours; Liberty, 1-2d, 4.10 in 24 hours; Little Mountain, 1-2d, 3.50 in 24 hours; Longshore, 1-2d, 2.76 in 24 hours; St. Matthews, 19-20th, 2.50 in 24 hours; Santuc, 1-2d, 2.76 in 24 hours; Shaw's Fork, 19th, 3.35 in 10.50 hours; Statesburg, 19th, 3.73 in 13.20 hours; Summer-ville, 2d, 2.60 in 24 hours; Trenton, 2d, 2.93 in 24 hours;

Winnsboro, 2d, 3.00 in 24 hours; Yorkville, 1-2d, 4.00 in 24 hours and on the 19th 4.34 in 24 hours.

Hail.—Santuc 1st, Spartanburg (2 days).

Sleet.—Gillisonville, 13-20th; Greenville, Longshore, 20th.

Snow.—(Trace) Greenville, 20-22d; Liberty, 20-21-22; Walhalla, Winthrop College, 21st.

Weather.—Average number of days clear 15, partly cloudy 4, cloudy 9.

Winds.—The prevailing direction of the wind was from the northwest at 18 stations, from the west at 9 stations, from the northeast at 8 stations, from the north at 4 stations, from the southeast, south, and southwest at 2 stations each, and from the east at 1 station.

High Winds.—Beaufort, 13-19-27th; Charleston, 19th; Gillisonville, 2-14-19-20th; Liberty, 3-6th; Little Mountain, 18th; Longshore, 2-19th; Walhalla, 2-3-6-7-8-14-15-20-21-25th; Winthrop College, 3d.

## MISCELLANEOUS PHENOMENA (with dates).

Lunar Halos.—Santuc, 5.

Solar Halos.—Charleston, 12, 17, 18; Santuc, Statesburg, 12, 17; Trial, 4, 29.

Fogs, Dense.—Blackville, 8; Gillisonville, 12; Liberty, 24.

Thunderstorms.—Beaufort, Charleston, Gillisonville, Statesburg, 2, 13, 19; Blackville, Shaws Fork, Society Hill, 13; Cheraw, 14, 20; Liberty, 1; Little Mountain, Santuc, Trial, Winthrop College, 2; Longshore, 2, 13; Walhalla, 27.

## CLIMATE AND CROPS.

The month of April, 1901, was the coolest of record since 1888, but notwithstanding the low average temperature, at a few points only did killing frosts occur. There were frequent light frosts, and their effects were decidedly harmful on young and tender vegetation, killing some cotton and checking the growth of field crops that were just coming up. The nights were uniformly cool and unfavorable for the germination of seeds, and the growth of vegetation.

The precipitation was largely in excess of the normal over the western half of the State, but was only slightly excessive or slightly deficient over the eastern half. The heavy rains caused the surface of plowed lands to become impacted, and, as it dried, to become crusted and hard.

The weather conditions on the whole were unfavorable for farmwork and plant growth. The former was greatly delayed by the excessive moisture, and the latter by the prevailing low temperature. Some cotton seed planted previous to the 15th, rotted in the ground, and much of what did come up was killed by the cold weather, so that more than the usual amount of replanting became necessary. The same conditions apply to corn, only to a less damaging extent. Tobacco plants in beds were small, although about the usual amount

of transplanting was accomplished. Rice planting was finished. Melons, gardens and other minor crops were also adversely affected by the prevailing weather. Peaches, pears and plums suffered but little and continued promising, although in many places the fruit prospects were impaired to a considerable extent.

#### REMARKS BY OBSERVERS.

Longshore.—The month was cold and wet, and unfavorable for farmwork.—W. G. Peterson.

Shaw's Fork.—Frost on the morning of the 22d killed a little cotton and some corn.—Geo. H. Atwood.

Spartanburg.—On two days during the month there was light hail, record of dates accidentally lost.—F. P. Robinson.

Statesburg.—Swallows heard on the 7th; 9th, humming bird appeared to-day; 24th, large brown flycatcher.—W. W. Anderson, M. D.

Santuc.—There were several light frosts, but no damage to crops resulted. Clouds prevented killing frosts on the 21-22.—E. W. Jeter.

Society Hill.—The cool, windy weather that usually prevails in March, extended throughout April and was disastrous to cotton, corn, and vegetables. All vegetation very backward.—Maj. J. J. Lucas.

Greenville.—On the 20th there were light flurries of sleet and snow between 6 and 7 a. m., and several times later in the day. On the 22d there was a light flurry of snow at 7.30 a. m.—Mrs. S. A. Crittenden.

Batesburg.—Month unfavorable for farm work. Some cotton killed by light frost on 21st, has been replanted. There was an unusually heavy rain on 20th, 2.95 inches having fallen in less than 12 hours.—E. J. Hite.

Summerville.—Unusually backward spring. Summer birds were not seen until the 15th. Minimum thermometer fell below 43° on 7 days. The mean maximum temperature was 6.8°, and the mean minimum 7.8° lower than for the same month in 1900.—Prof. Jno. Gadsden.

Beaufort.—The mean temperature was 5.2° below the normal; rainfall 1.22 inches above. It has been a cool and backward season. Oats look fairly well. Green peas have done well, and large quantities were shipped by the close of the month.—S. M. Benton.

Liberty.—April was a peculiar month. The direction of the wind remained constant for several days at a time. The fruit crop escaped injury. Small grain crops look well. General

field crops coming up to stands slowly, and much replanting is necessary.—Jno. T. Boggs.

Trenton.—Precipitation 2.60 inches more than the 8-year average for April, and 0.78 less than the 8-year average for the first 4 months of the year. Three-fourths of the cotton crop was replanted; the seeds sprouted, but it was so cold the plants did not come up.—C. A. Long.

Gillisonville.—There were brisk, cold winds during the entire month causing rapid evaporation of moisture from the soil. Weather conditions unfavorable for germination and growth, and early planted corn and cotton were killed or stunted. The month was warm at its close, and corn had received its first cultivation.—Sam P. Saltus.

Winthrop College.—On the 27th a brilliant green meteor was noted at 11.55 p. m., in the tail of Scorpio—eastward and downward. On the 10th, at about 11.30 p. m., two distinct shocks of earthquake were felt, being separated by an interval of 10-15 seconds. The direction seemed to be from east towards the west, and the force was sufficient to rattle the windows of the brick dormitory.—Dr. Cleveland Abble, Jr.

#### EDITORIAL NOTE.

A part of Census Bulletin No. 58, recently issued, is devoted to the production of cotton in South Carolina, in 1899, by counties, and shows that Orangeburg county produced 62,071 bales. This exceeds the next largest county yield by 10,667 bales, Sumter county having produced 51,404.

It does not necessarily follow from the above that Orangeburg's soil is the best adapted to the cultivation of cotton, or produced the largest yield per acre, which is the true test of productiveness. The acreage devoted to cotton is not given in the bulletin, but dividing the number of bales raised in each county by its area in square miles gives the number of bales per square mile. This was done for every county and the result of the computation shows that 75.6 bales per square miles were produced in Marlboro county, and characterizes that as the leading cotton producing county in the State. Sumter county come second with 59.8 bales per square mile, while Orangeburg ranks sixth, having raised only 46.1 bales to the same unit of area, being outranked by the two counties already mentioned and also by Anderson with 50.9, Laurens with 52.5, Greenwood 53.8, and Bamberg with 57.4.

Georgetown county ranks lowest with 1.6 bales per square mile. In six counties the production per square mile was 0 to 10 bales, in six 11 to 20, in eight 21 to 30, in nine 31 to 40, in five 41 to 50, in five 51 to 60, and in one only over 60.

The weather during 1899 was not altogether favorable for the production of cotton, there having been a severe drought over a large portion of the western half of the State, that lasted well into September. The following summary of crop yields taken from the Annual Report, South Carolina Section Climate and Crop Service of the Weather Bureau was verified by later investigations, and has an important bearing of the above data: "In the comparative scale of 'poor,' 'good,' and 'full' yields, the year 1899 will rank as having produced 'poor' crops in the State as a whole, 'good' over quite large areas, and 'full' in limited localities, generally in the east-central counties."

CLIMATOLOGICAL DATA FOR THE MONTH OF APRIL, 1901.																			
STATIONS.	Counties.	Elevation—feet.	Length of record—years.	Temperature—in degrees Fahrenheit.						Precipitation—in inches.					Sky.				Observers.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR MAY, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV.

COLUMBIA, S. C., MAY, 1901.

No. 5.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for the month of May, 1901, was  $71.4^{\circ}$ , which is  $0.3^{\circ}$  below the normal. The highest local mean was  $73.8^{\circ}$  at Beaufort; the lowest  $65.9^{\circ}$  at Liberty. The highest temperature was  $99^{\circ}$  at Gillisonville and Temperance on the 3d; the lowest  $40^{\circ}$  at Greenwood on the 28th, making the State range  $59^{\circ}$ . The greatest local range was  $55^{\circ}$  at Greenwood; the least  $32^{\circ}$  at Trenton. The mean of the daily maximum temperatures was  $82.6^{\circ}$ ; of the daily minimum temperatures  $60.2^{\circ}$ .

## Precipitation, in Inches.

The average precipitation was 7.31 inches, which is 4.03 inches above the normal. The greatest local amount was 3.08 inches at Winthrop College; the least 2.17 at Beaufort. The greatest 24-hourly fall was 6.25 inches at Winnsboro on the 21st. The average number of days with rain was 11, ranging from 4 at Georgetown to 17 at Statesburg.

Excessive Precipitation.—Calhoun Falls, 20-21st, 5.41 in 20 hours; Cheraw (1), 22d, 3.92 in 24 hours; Cheraw (2), 21-22d, 3.95 in 24 hours; Columbia, 20-21st, 4.88 in 24 hours; Conway, 21-22d, 2.50 in 24 hours; Darlington, 21st, 4.20 in 24 hours; Edisto, 20-21st, 2.75 in 24 hours; Effingham, 21-22d, 3.10 in 24 hours; Florence, 21-22d, 3.50 in 24 hours; Georgetown, 19-20th, 3.90 in 24 hours; McColl, 21-22d, 2.85 in 24 hours; Shaws Fork, 19-20th, 3.02 in 24 hours; Smiths Mills, 21st, 4.60 in 12 hours; Society Hill, 21st, 3.95 in 24 hours; Spartanburg, 21-22d, 4.80 in 24 hours; Statesburg, 21-22d, 2.92 in 24 hours; Temperance, 20-21st, 5.20 in 24 hours; Winnsboro, 21st, 6.25 in 24 hours; Winthrop College, 21-22d, 3.84 in 24 hours; Yorkville, 20-21st, 3.71 in 24 hours.

Floods in Rivers.—Floods occurred in all the rivers and minor streams of the western half of the State on the 21-22-23-24th.

Hail.—Hail was observed and reported by climate and crop correspondents, from nearly every county, on the 19th to the 22d, very destructive in places over limited areas, and hail was noted by voluntary observers as follows: Beaufort, 19; Blackville, 8; Camden, 11, 13; Cheraw, 10, 12; Clemson

College, Kingstree, 5; Greenwood, 19; Society Hill, 6; Statesburg, 19, 20; Summerville, 15; Temperance, 10, 20; Trenton, 25.

Weather.—Average numbers of days clear 13, partly cloudy 10, cloudy 8.

Winds.—The prevailing direction of the wind was from the southwest at 21 stations, from the west at 13 stations, from the northwest and south at 3 stations each, from the east at 2 stations, and from the southeast at 1 station.

High Winds.—Beaufort, 28; Charleston, 21; Gillisonville, 2, 31; Liberty, 12, 13, 14; Santuc, 8; Trenton, 19; Walhalla, 6, 19, 28, 29; Winthrop College, 21.

## MISCELLANEOUS PHENOMENA (with dates).

Parhelion.—Trenton, 1.

Frost, Light.—Longshore, 28.

Solar Halos.—Charleston, 5, 9, 22, 26, 31; Gillisonville, 28; Santuc, 9; Statesburg, 5, 16.

Lunar Halos.—Charleston, 25, 26; Gillisonville, 26, 27; Santuc, Winthrop College, 31.

Fogs, Dense.—Beaufort, Camden, 15; Blackville, Cheraw, 23, Charleston, 23, 24; Clemson College, 21; Edisto, 31; Gillisonville, 5, 6, 15, 16, 23, 24, 25; Liberty, 18, 22; St. Stephens, Trial, 24; Society Hill, 14, 15, 23, 24; Statesburg, 15, 23.

Thunderstorms.—Beaufort, 6, 7, 8, 14, 17, 18, 19, 20, 21, 25, 26, 28, 30; Blackville, 7, 8, 17, 18, 19, 20, 21, 25, 26, 28, 31; Camden, 11, 13, 21, Charleston, 6, 10, 14, 18, 19, 21, 27, 28; Cheraw, 3, 6, 10, 12, 17, 19, 20, 25, 26; Columbia, 7, 8, 10, 12, 17, 19, 20, 21, 25, 26; Gillisonville, 5, 6, 7, 8, 13, 14, 17, 19, 20, 21, 23, 25, 26, 28, 30; Greenwood, 19, 20, 21; Liberty, 19, 20, 21, 25, 30; Little Mountain, 10, 12, 26, 30; Longshore, 5, 7, 17, 18, 19, 20, 21, 25; McColl, 17; Santuc, 5, 10, 12, 17, 19, 20, 28; Shaws Fork, 7, 8, 12, 18, 19, 20, 25, 28; Society Hill, 3, 6, 7, 10, 12, 16, 19; Statesburg, 6, 7, 10, 12, 17, 18, 19, 20, 26, 28; Summerville, 10, 18, 19; Trenton, 10, 12, 19, 20, 21, 22, 25; Trial, 7, 8, 9, 12, 13, 17, 18, 19, 20, 26; Walhalla, 5, 18, 19, 25; Winthrop College, 3, 8, 10, 19, 20, 21, 25, 26, 30; Yorkville, 8, 10, 19, 21, 25.

## CLIMATE AND CROPS.

The month of May, 1901, was noted chiefly for its excessive precipitation, and its inversion of temperature. The mean temperature averaged nearly normal, but the maximum occurred generally on the 3d of the month, while the minimum was generally noted on the 28th, and at places the latter was low enough to seriously check the growth of young cotton and other field crops that are susceptible to thermometric conditions.

There were light local rains during the first decade, and only scattered showers, heavy in a few places, up to near the close of the second, at which time the heaviest rains ever recorded in May set in, and, with exceptions on the 23d, 24th

and 28th, continued to the close of the month, generally delaying, and at many points absolutely preventing, cultivation and plowing. The precipitation was heaviest in York, Chester, Fairfield, Chesterfield, Marlboro and Marion counties, but was in excess of the normal over all save the extreme southeastern portion of the State where there was a slight deficiency.

Tornadic conditions prevailed on the 21st, over the central and north-central counties, with several well-defined tornadoes that did considerable damage over limited areas in Clarendon, Sumter, Darlington and York counties. During the period of heavy rains from the 19th to the 22d, destructive hail storms occurred at a number of widely separated localities. There were floods in all the up-country streams, and the Broad, Tygar and Great Pee Dee rivers, in portions of their courses, rose above previously recorded high water stages. Crops on bottom lands subject to overflows were largely destroyed, while hillsides and terraced lands were extensively washed and damaged.

The meteorological conditions throughout the month were unfavorable to field crops, except to fall sown grain. Early in the month the ground was too dry to germinate seeds, and poor stands of corn, cotton, cane, melons, rice and transplanted tobacco were the prevailing conditions. The latter portion of the month was over-abundantly supplied with moisture to the physical injury of lands and to some crops, but seeds that had lain dormant now sprouted rapidly and all field crops attained perfect stands. However, the low temperature during the last decade adversely affected the growth of cotton, corn, tobacco and melons. This in connection with an already backward season, due to the abnormally cool April, made the condition of all field crops very late and poor by the close of the month.

Oats improved, partially ripened and some were harvested; wheat maintained its excellent condition; truck and gardens were helped by the rains, so that while spring-planted field crops made poor progress, the condition of minor crops, and fall-sown ones, and pastures were better.

**ERRATUM.**—Monthly report for April, 1901, on page 5, the monthly mean temperature at Greenwood, 53.5°, should be 53.8°.

#### REMARKS BY OBSERVERS.

Longshore.—The latter portion of the month was unfavorable to farmers —W. G. Peterson.

Summerville.—May, usually a dry month at this point, has been this year a most acceptably showery one.—Prof. Jno. Gadsden.

Batesburg.—The first part of the month was very fine for farmwork, but the month ended with excessive rains and cool weather.—E. J. Hite.

Greenwood.—The cool nights during the latter portion of the month killed some cotton planted on sandy lands. Fields are very grassy.—M. M. Calhoun.

Little Mountain.—At the end of the month many fields are grassy. Much cotton has not been thinned to stands. Wheat and oats are ready to harvest.—John M. Sease, M. D.

Society Hill.—Fog occurred on four days. Precipitation was unusually heavy, and was disastrous to corn and cotton, but tobacco was apparently uninjured.—J. J. Lucas.

Gillisonville.—The latter portion of the month was cool and very wet, conditions not favorable for working cotton and corn, and fields are grassy. All crops are small for the season, although healthy and making some growth. Oats are yielding fairly well.—Sam P. Saltus.

Winthrop College.—On the 21st, winds destroyed several houses and sheds at New Harmony; some houses in Rock Hill report windows blown out. Between the College and the farm, one mile to the north, fences were blown down and trees were torn up by the roots.—Dr. Cleveland Abbe, Jr.

Liberty.—Crops are very irregular and uneven. Early corn came up badly owing to cold weather and beating rains; later plantings came up badly owing to dry weather. Fruit is dropping badly, peaches especially so. Truck patches look well. Small grain is doing nicely.—John T. Boggs.

Trenton.—Saturday night, May 25th, hail and a cloudburst, two miles north of this place, did great damage to all crops, and to lands. The precipitation was 3.07 inches more than the 9-year average for May, and is 2.74 inches more than the 8-year average for the first 5 month of the year.—C. A. Long.

Santuc.—The month was noted for its low morning temperatures—much too low for the growth of cotton. The month was also too wet, causing bottom lands to be too wet to plow or plant, and floods occurred in water courses. Insects were numerous, especially worms, that ruined much late-planted corn.—E. W. Jeter.

#### EDITORIAL NOTE.

Dr. Cleveland Abbe, Jr., for the past two years voluntary observer at Winthrop College, has severed his connection with that institution for the purpose of going abroad. While in Europe he intends to take a post-graduate course at some University. His place as voluntary observer will be taken by Prof. J. W. Thomson, professor of Pedagogics at Winthrop College.

The voluntary observing station that for so many years was located at Holland, Anderson county, has recently been removed to the city of Anderson, with Mr. R. B. Dean as observer. No report from that point is available for this month, but beginning with some time in June regular reports will be received. The service maintained a rainfall station at Anderson for a number of years, and that record will be used to compute the normal rainfall for the new station, while the normal temperature for Holland can be used without material error.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV.

COLUMBIA, S. C., JUNE, 1901.

No. 6.

## CLIMATE AND CROPS.

While June, 1901, averaged slightly cooler than usual, the month was free from rapid or violent temperature fluctuations, and this equableness was favorable to the growth of vegetation, but, as in May, there was an excess in precipitation that was harmful, not only in largely preventing proper cultivation of field crops, thereby permitting them to become foul with grass and weeds, but the soil also became too wet for the normal development of the staple crops. A large and general deficiency in sunshine also contributed to their deterioration.

Floods occurred in nearly all the rivers and smaller streams, and, to a large extent, such crops as were replanted after the floods of May were destroyed, while bottom lands were in many places too wet to replant, thus throwing out of production some of the richest corn lands in the State.

As a result of these adverse meteorological conditions, cotton failed to make its usual June progress and rapid growth, and by the close of the month its condition was extremely poor, being small, late, grassy, and generally having an unhealthy color. Corn and tobacco were also in bad condition, and generally unpromising. The former was in many sections practically a failure, and generally tasseled low, had tender stalks, and was of yellow color. There were, of course, exceptions where the crop had timely and proper cultivation. The minor crops, especially such as do not depend on cultivation for their development, did very well, although the area planted to June rice was smaller than usual on account of freshets. Peaches ripened, but there was much rotting. Apples dropped to a large extent. Wheat and oats were harvested under adverse conditions due to frequent rains, and much of the grain was damaged in the shock by sprouting. Much bottom-land oats was destroyed by floods, when ripe and ready to be harvested. The scarcity of farm laborers is a serious factor in farm economics during this month.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for June, 1901, was 76.7°, which is 1.4° below the normal. The highest local mean was 79.2° at Yemassee, the lowest 72.0° at Greenville. The highest maximum temperature was 102° at Batesburg on the 24th, the lowest minimum was 48° at Walhalla on the 1st, making the State range 54°. The greatest local range was 47° at Clemson College, the least 32° at Trenton. The mean of the daily maximum temperatures was 86.0°, of the daily minimum temperatures was 67.4°.

## Precipitation, in Inches.

The average precipitation was 6.55 inches, which is 2.02 inches above the normal. The greatest local amount was 11.92 inches at Pinopolis, the least was 3.60 at Walhalla. The greatest 24-hourly fall was 4.05 inches at Anderson on the 13th. The average number of days with rain was 12, ranging from 7 at Allendale, Anderson, and Walhalla to 17 at Greenville.

Excessive Precipitation.—Anderson, 13th, 4.05 in 24 hours; Beaufort, 15th, 2.65 in 12 hours; Calhoun Falls, 14th, 2.70 in 24 hours; Cheraw (2), 16-17th, 2.67 in 24 hours; Clemson College, 13th, 2.60 in 24 hours; Darlington, 13th, 2.75 in 24 hours; Effingham, 14th, 2.60 in 24 hours; Florence, 13-14th, 3.50 in 18 hours; Georgetown, 12th, 3.50 in 24 hours; Greenville, 13-14th, 3.13 in 23 hours; Little Mountain, 16th, 2.69 in 16 hours; Pinopolis, 13th, 3.05 in 24 hours, and on 30th, 2.50 in 24 hours; St. Matthews, 13-14th, 2.50 in 24 hours; Smiths Mills, 13-14th, 2.50 in 24 hours; Spartanburg, 13 to 15th, 5.47 in 51 hours; Trial, 12-13th, 2.89 in 12 hours, and on 15th 2.55 in 12 hours.

Hail.—Damaging hail occurred in Abbeville, Bamberg, Barnwell, Aiken, Lexington, Newberry, and Saluda counties. Specific dates on which hail fell were reported by voluntary observers as follows: Blackville, Cheraw, Longshore, Winthrop College 24th; Clemson College 17th; Florence, Temperance 30th; Gillisonville 3-30th; Walhalla 23rd.

Weather.—The average number of days clear was 9, partly cloudy 12, cloudy 9.

Winds.—The prevailing direction of the wind was from the southwest at 15 stations, from the south at 10, from the southeast at 6, from the west at 5, and from the north, northeast and northwest at 1 station each.

High Winds.—Anderson 29th; Charleston, Longshore, Statesburg, Trial 25th; Cheraw (1) 24th; Columbia 11-22-25th; Florence 30th; Gillisonville 3-13-30th; Liberty 1-7-14-22-25-26th; Walhalla 7th.

## MISCELLANEOUS PHENOMENA (with dates).

Lunar Halos.—Charleston, 28; Gillisonville, 2.

Solar Halos.—Charleston, 11, 28, 30; Gillisonville, 12, 16, 17; Santuc, 12; Statesburg, 11, 20; Walhalla, 5.

Fogs, Dense.—Anderson, Statesburg, Trial, 21; Edisto, 17, 21; Liberty, 15, 16, 23, 29, 30; Longshore, 2, 4; St. Stephens, 2, 21; Society Hill, 20.

Thunderstorms.—Anderson, 29; Beaufort, 3, 6, 14, 15, 16, 21, 22, 23, 24, 25, 26, 30; Blackville, 3, 6, 14, 16, 25, 26, 30; Camden, 15; Charleston, 3, 6, 16, 17, 22, 24, 25, 26, 30; Cheraw, 3, 10, 15, 16, 17, 21, 22, 24, 25, 26, 30; Clemson College, 14; Columbia, 9, 11, 16, 21, 22, 24, 25, 26, 29; Florence, McColl, 30; Gillisonville, 3, 6, 14, 15, 16, 21, 22, 24, 25, 26, 30; Liberty, 6, 11, 14, 15, 16, 17, 19, 20, 22, 30; Longshore, 6, 14, 15, 16, 24, 30; Pinopolis, 22, 30; Santuc, 6, 14, 15, 16, 18, 20, 24, 25, 28, 29, 30; Society Hill, 3, 13, 16, 30; Statesburg, 3, 6, 9, 14, 15, 16, 21, 22, 24, 25, 26, 29, 30; Summerville, 21, 24, 25, 30; Trenton, 3, 14, 15, 16, 20, 24, 25, 27, 30; Trial, 3, 6, 16, 21, 22, 24, 25, 30; Walhalla, 6, 10, 11, 14, 15, 16, 17, 22, 23, 24, 25, 26, 27, 28, 29; Winthrop College, 15, 16, 22, 24, 25, 26, 29, 30; Yorkville, 18, 20, 22, 25, 30.

LATE MAY REPORT.—Pinopolis, mean temperature 71.3°, total precipitation 5.69 inches, number of days with rain 11, number of days clear 15, cloudy 16, prevailing direction of the wind northwest.

#### ERRATA.

May report, on page 5, Beaufort, minimum temperature 57° on the 1st and 2d should be 56° on the 5th; page 5, Trenton, monthly mean temperature 73.4° should be 73.6°.

#### A RAIN OF FISHES.

Mr. J. W. Gardner of Kershaw county reports an unusual phenomenon that occurred near Tillers Ferry during a heavy rain near the close of June. He states that hundreds of little fishes were found swimming between the rows of a cotton field, and that among them were cat fish, perch, and a few that looked like trout. There is no creek or pond near the field from whence they might have come, and he asks the difficult question, where did they come from?

#### REMARKS BY OBSERVERS.

Cheraw (1).—There was a heavy wind storm on the 25th, and a heavy thunderstorm on the 30th.—W. R. Godfrey.

Pinopolis.—On the 22d there occurred the severest storm of many years; nine or ten trees were struck by lightning in this immediate vicinity.—E. P. Ravenel.

Summerville.—The moisture of the atmosphere was excessive from the 12th to the 18th, and the average relative humidity for the month was 80 per cent.—Prof. John Gadsden.

Society Hill.—Oats and wheat were harvested, with good yields. Continued rains have been hurtful to cotton, corn

and tobacco, with the outlook very discouraging for the final results.—Maj. J. J. Lucas.

Longshore.—On the 24th lightning struck a dwelling at Newberry, and a stable at Silver Street killing a horse. The rainfall has been excessive in portions of the county, and lands are badly washed.—W. G. Peterson.

Beaufort.—Mean temperature averaged 1.6° below normal. Precipitation is 4.18 inches above normal. Cotton is mostly small and poor. Corn, except a few fields of early planted, is poor and spindling.—S. M. Benton.

Batesburg.—Very little farm work could be done during the first part of the month, on account of frequent, heavy rains, but the latter part was more favorable. All crops were looking well at the close of the month.—E. J. Hite.

Anderson.—Crops did not improve much during June, and the prospects are gloomy. Crops were grassy and laborers scarce. Heavy rains in portions of the county on nearly every day. Cotton shedded leaves, and looks yellow.—R. B. Dean.

Gillisonville.—A very unfavorable month. The first and last portions were cool and wet, and all field work was interrupted. Crops look sickly, are small, and of poor prospect. Corn laid by. Heavy rain and hail storm on the 30th.—Sam P. Saltus.

Florence.—On the 30th there were severe wind and hail, most damaging about two miles southeast of this point, where crops were injured and trees blown down. There was also a severe local storm west from here on the same date.—H. K. Gilbert.

Trenton.—The precipitation was 2.91 inches more than the 9-year average for June, and is 6.03 inches more than the 8-year average for the first 6 months of the year. Cotton and corn are very poor; they were drowned on lowlands, and are grassy.—C. A. Long.

Liberty.—Much rain and damp weather caused crops to become very foul. Small grain crops were damaged somewhat by wetness and high winds. The fruit crops, especially early peaches and grapes, are rotting badly. Wild plum and berry crops are unusually fine.—John T. Boggs.

Santuc.—The month was characterized by much cloudiness that prevented the ground that was saturated by the heavy rains in May, from drying, and all farming operations were hindered and delayed. There was much thunder, some of it very loud, during the month, and rains were usually accompanied by high winds.—E. W. Jeter.

## CLIMATOLOGICAL DATA FOR THE MONTH OF JUNE, 1901.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR JULY, 1901.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

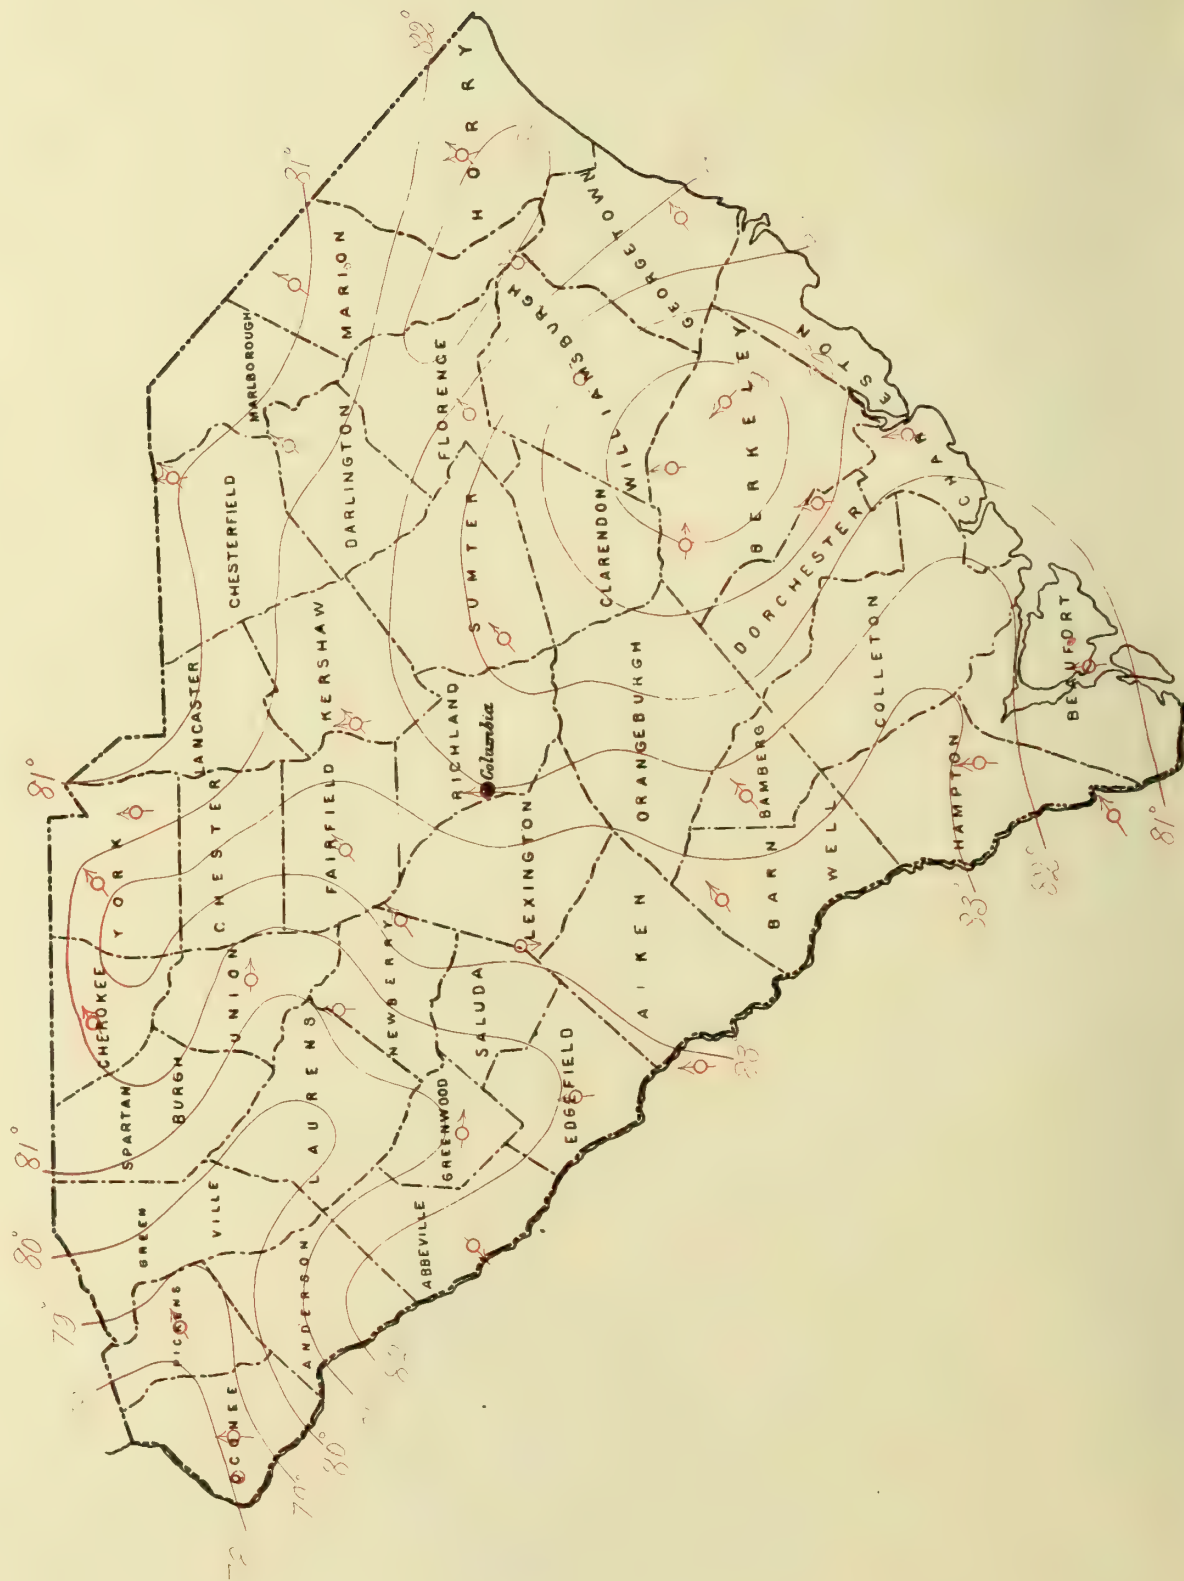

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JULY, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,  
**CLIMATE AND CROP SERVICE**  
OF THE  
**WEATHER BUREAU.**  
CENTRAL OFFICE: WASHINGTON, D. C.  
  
SOUTH CAROLINA SECTION.  
J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., JULY, 1901. No. 7.

CLIMATE AND CROPS.

On the whole, and with limited exceptions only, the July weather was favorable on agricultural interests throughout the month. The exceptions were due to excessive precipitation in the extreme northeastern portions, and to drought centered in Fairfield county, although scattered localities elsewhere had insufficient rainfall, but no crop suffered seriously from lack of moisture, and all made some improvement in their condition.

The temperatures were equable and never excessive, although maximum temperatures of 100°, or over, were noted at a few points, and on several days. The nights were uniformly warm, and no cool period usual to the month occurred.

There was generally enough precipitation to keep field crops growing, and enough dry weather and sunshine to enable farmers to rid cultivated fields of weeds and grass that had attained a rank growth at the close of June.

The improvement in cotton began early in July, and as the month advanced and the fields were cleaned and cultivated, the improvement became marked and general. The plants lost their sickly cast, became green, looked healthy, and began to grow and fruit rapidly, but they did not fully overcome their previous backwardness, and continued to be unseasonably small and late.

Early corn ripened during the month, but was too nearly ruined to be benefited by the favorable weather of the month, and is a very short crop. Late planted corn, especially that planted on stubble lands, became quite promising, but river bottoms where usually the finest corn is raised, were largely abandoned owing to the rank growth of grass and weeds and the freshets of the previous month.

As oats thrashing progressed, it showed that much of the grain was light and shrunken, due, it is reported, to the heavy rains at time of blooming. Minor crops, both food and forage, gained in condition. Peaches rotted extensively and many were wormy. Apples dropped more than usual. Tobacco cutting and curing began early in the month, but later some of the crop took on new growth, delaying this work. The crop was not as good as usual. Rice did well, and began to head. In the truck raising districts, the weather was fav-

orable for plowing and preparing lands for fall seeding, and for setting out plants. Many sweet-potato slips were planted and peas sown during the month. The agricultural outlook was decidedly more encouraging at the close of this month than at the close of June.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for July, 1901, was 81.4°, which is 1.9° above the normal. The highest local mean was 82.8° at Little Mountain and Winnsboro; the lowest 77.9° at Walhalla. The highest recorded temperature was 102° at Batesburg and Longshore, on the 25th, the lowest minimum was 62° at Walhalla on the 19th, making the State range 40°. The greatest local range was 36° at Greenwood, Longshore, and Santuc, the least was 22° at Charleston. The mean of the daily maximum temperatures was 90.6°, of the daily minimum temperatures was 72.1°. The maximum temperature rose to 100°, or above, on four dates and at ten stations.

Precipitation, in Inches.

The average precipitation was 4.52 inches, which is 1.85 inches below the normal. Excessive monthly precipitation was confined to the eastern and northeastern counties, and comprised less than one-fourth of the area of the State. Over the remainder of the State there was a deficiency. The greatest local amount was 13.25 inches at Georgetown, the least was 0.65 at Winnsboro. The greatest 24-hourly fall was 4.15 inches at Georgetown, on the 13th. The average number of of days with rain was 10, ranging from 6 at Anderson, Calhoun Falls, Greenwood, St. Stephens, Trenton and Winnsboro to 16 at Charleston.

Excessive Precipitation.—Anderson, 8th, 1.30 in 30 minutes; Cheraw (2), 15-16th, 2.64 in 24 hours, Columbia, 14th, 1.04 in 1 hour; Georgetown, 13th, 4.15 in 24 hours, also on 26th, 2.50 in 24 hours; Greenville, 18-19th, 2.80 in 24 hours; Liberty, 26th, 0.96 in 1 hour; Longshore, 14th, 1.50 in 1 hour, also on 18th, 2.54 in 3 hours; Society Hill, 6.00 in 48 hours; Temperance, 14th, 3.40 in 24 hours.

Hail.—Anderson, Camden, 25; Society Hill, 27; Statesburg, Trenton, 31; Winthrop College, 14.

Weather.—The average number of clear days was 12, of partly cloudy days 12, and of cloudy days 7.

Winds.—The prevailing direction of the wind was from the southwest at 21 stations, from the south at 15 stations, from the west at 3 stations, and from the north, northeast, and southeast at 1 station each.

High Winds.—Beaufort, 12; Charleston, 14; Columbia, 14, 16, 26, 27, 31; Darlington, 25, 27.

MORE VOLUNTARY OBSERVING STATIONS.

It has been deemed desirable to increase the number of voluntary observing stations in South Carolina, so that full

reports will be received from every county in the State. To this end the stations at Camden, Conway and Gaffney have been supplied with thermometers and instrument shelters, and new stations have been authorized at Sumter, Bowman, Barksdale, Seivern, and Due West, and supplied with the full outfit. It is the intention to increase the number of voluntary observing stations to at least twice the present number, if suitable observers can be secured. Chester, Clarendon, Colleton, Lancaster and Saluda counties are without stations of any kind, and lower Abbeville, western Chesterfield, and northwestern Spartanburg are also desirable locations for stations.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Corona.—Santuc, 1, 5.

Lunar Aureola.—Gillisonville, 1.

Parhelia.—Liberty, 29; Santuc, 28.

Lunar Halos.—Charleston, 2, 3, 5, 6; Columbia, 1; Gillisonville, 25, 26.

Solar Halos.—Charleston, 4, 5, 7, 10, 11, 17, 18, 19; Gillisonville, 9; Santuc, 5, 10; Statesburg, 5, 6; Walhalla, 10.

Fogs.—Blackville, 23; Gillisonville, 28; Greenville, 2; Liberty, 1, 2, 20, 23; Society Hill, 20, 28; Walhalla, 2.

Thunderstorms.—Beaufort, 1, 6, 8, 9, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 26, 27, 31; Blackville, 8, 11, 15, 16, 17, 18, 19, 20, 21, 26; Camden, 14, 15, 16; Charleston, 1, 2, 8, 13, 14, 16, 17, 19, 20, 26, 31; Cheraw (2), 14, 15, 16, 18, 19, 26, 27, 30, 31; Columbia, 1, 7, 14, 16, 18, 22, 27, 29, 31; Darlington (severe), 25; Gillisonville, 1, 8, 9, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 26, 27, 29, 31; Greenville, 15, 17, 18, 27; Liberty, 5, 6, 7, 8, 13, 15, 16, 17, 18, 19, 20, 25, 26, 27, 28, 30; Little Mountain, 18, 22, 31; Longshore, 14, 17, 18, 19, 25; Santuc, 8, 14, 17, 18, 26, 27, 28, 30; Society Hill, 14, 15, 21, 25, 27, 31; Spartanburg, 15; Statesburg, 13, 14, 15, 16, 19, 22, 25, 27, 28, 30, 31; Summerville, 19, 20, 26, 31; Trenton, 1, 16, 17, 18, 19, 31; Trial, 14, 16, 18, 19, 31; Walhalla, 6, 7, 15, 16, 17, 18, 19, 20, 25, 26; Winthrop College, 14, 15, 16, 17, 18, 26, 27, 31; Yorkville, 8, 18, 19, 28, 31.

#### ERRATA.

June, 1901, monthly report, on page 5, mean temperature at Georgetown, 76.3°, should be 76.2°; same page, mean temperature at Gillisonville, 78.3°, should be 78.4°.

#### REMARKS BY OBSERVERS.

Yorkville.—Frequent thunderstorms at a distance.—J. R. Schorb.

Batesburg.—Month very dry. Lightest July rainfall in past 20 years.—E. J. Hite.

Society Hill.—Excessive precipitation was damaging to cotton, corn and tobacco.—Maj. J. J. Lucas.

Summerville.—General direction of the wind was southeast to southwest. Average relative humidity for July was 80 per cent.—Prof. John Gadsden.

Liberty.—Crop conditions are much improved this month, and but little cultivated land abandoned except river bottoms, in this section. Most low-lying bottoms entirely lost. Cotton small but doing well.—John T. Boggs.

Beaufort.—Mean temperature is 1.1° below normal; precipitation is 1.59 inches less than normal. Cotton improved very much during the last three weeks of July. Corn is mostly very light. Fodder pulling was begun.—S. M. Benton.

Anderson.—Cotton grew fast and fruited well where it is large enough. Corn improved. Heavy wind and hail in some localities, on the 25th, did much damage to crops. Good rains fell over the county during the last week of July.—R. B. Dean.

Santuc.—There were several almost calm days when it was difficult to determine the direction of the wind; during this time the heat was oppressive. All the rains of the month, except on the 18th and 19th, came from small floating clouds, and were local. Much thunder prevailed.—E. W. Jeter.

Gillisonville.—Month warm and showery, and crops were much benefited. Corn laid by with fair prospect for a good crop. Cotton has not recovered from its previous low condition sufficiently to remove doubts as to its probable yield; a few fields are good and the majority exceedingly poor.—Sam P. Saltus.

Trenton.—Precipitation 3.03 inches less than the 9-year average for July, and 3.17 inches more than the 8-year average for the first seven months of the year. 31st, p. m., severe wind and electric storm occurred; it blew down corn, some trees and a building; 2 mules, a mare and a colt were killed by lightning in a pasture, under tall pine trees.—C. A. Long

#### EDITORIAL NOTE

Reports for July were not received from Clemson College and McColl in time to be included in the summary.

The station at Shaws Fork has no thermometers at present pending its removal to Aiken.

The station at Darlington has been furnished a set of thermometers and an instrument shelter, completing its full equipment.

The Weather Bureau will no longer furnish weather temperature flags to display in places having more than 5,000 inhabitants. If the display is desired at such cities, the flag must be provided locally.

REPORT FOR AUGUST, 1901.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

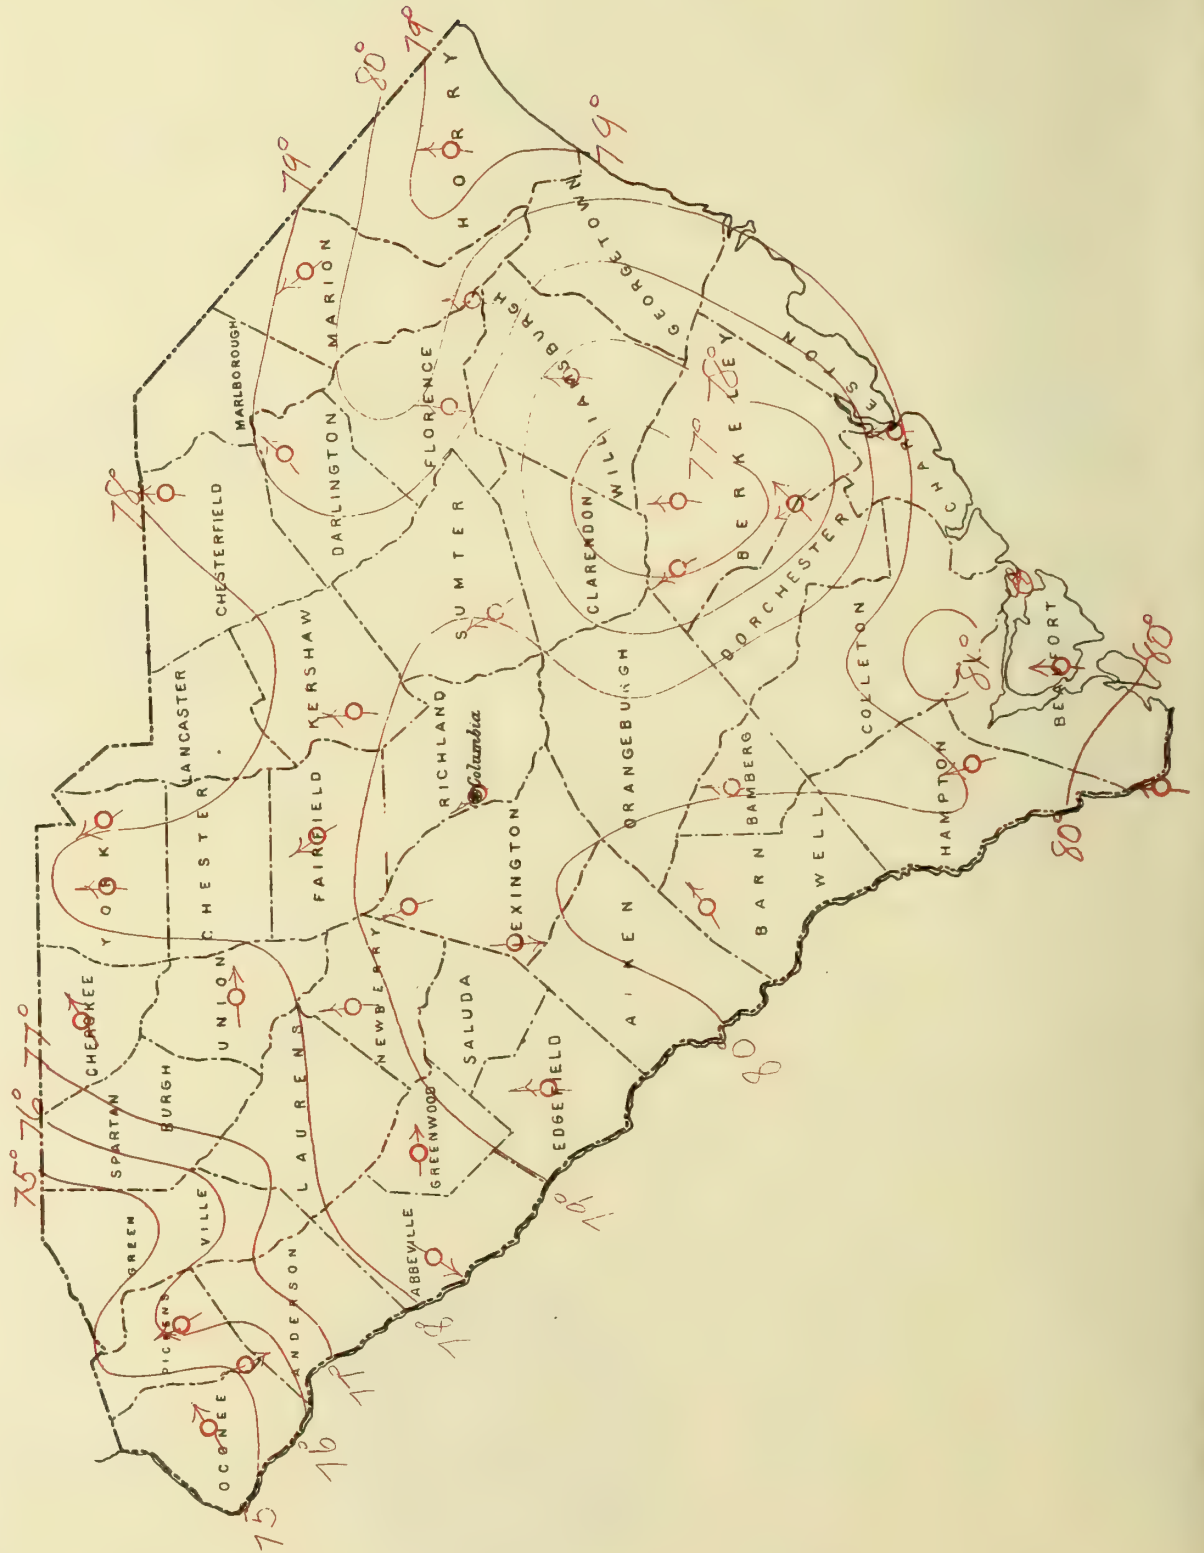

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR AUGUST, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., AUGUST, 1901. No. 8.

## CLIMATE AND CROPS.

The temperature conditions during August were extremely favorable on all growing and maturing crops. No abnormally hot weather occurred, and the night temperatures were never low enough to check growth, and varied but little from day to day. The average mean temperature was exactly normal.

In the matter of precipitation the month was not so favorable. There was an excess of rainfall over the western and northern portions of the State. Some points had from 10 to 13 inches more than the usual amount, the greatest excess having occurred in the extreme western portion, from which point there were gradually diminishing amounts to the southeastern portion where there was a deficiency of from one to over six inches. These conditions are a reversal of the normal distribution of precipitation during August, as the rainfall is usually heaviest over the eastern half of the State. Even where least fell, no injury or drought resulted, while the principal injury from the excessive rains was to cause overflows in the streams that destroyed bottom-land crops; some lands were also badly washed and eroded.

Early in the month cotton was late and undersized, but as the month advanced, and under the beneficial influence of moderate summer heat and plenty of moisture, the plants grew rapidly, so that by its close there was complaint of too great a growth of stalk and too little fruitage, while generally the plants were well fruited, although much of it was put on very late. Bolls began to open about the 15th, and the first bale was marketed on the 20th which is somewhat later than the usual date of the "first bale." Picking made little progress during the month. The condition of cotton improved steadily throughout August, and was very promising at its close. The wet weather caused some rotting of immature bolls, and on sandy lands growth stopped while rust and hedding developed over considerable areas.

Early corn received little or no benefit from the improved weather conditions, but late corn made rapid improvement, although the average condition was nevertheless somewhat lower than in July. Worms did much injury to corn.

Late tobacco cutting and curing was finished. This crop suffered slight deterioration. Rice made fair progress, and aside from injury due to numerous rice birds and to freshets,

the crop improved steadily. Sweet potatoes planted early began to yield, while slips continued to be transplanted. Forage crops grew luxuriantly. The soil was in excellent condition for plowing preparatory to planting fall truck crops. Fruits rotted extensively in the western portions of the State due to too much rain.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for August, 1901, was 78.6°, which is exactly normal. The highest local mean was 81.0° at Yemassee; the lowest 74.2° at Walhalla. The highest maximum temperature was 97° at Allendale on the 1st, and at Greenwood on the 11th; the lowest minimum was 57° at Clemson College on the 15th, and at Liberty on the 28th, making the State range 40°. The greatest local range was 37° at Clemson College, and the least 16° at Charleston. The mean of the daily maxima temperatures was 87.0°, and of the daily minima temperatures was 70.2°.

## Precipitation, in Inches.

The average precipitation was 9.01 inches, which is 2.70 inches above the normal. Excessive precipitation occurred over the northern, central, and western counties, while there was a deficiency over the southeastern portions. The greatest local amount was 19.32 inches at Liberty, the least 3.23 at Beaufort. The greatest 24-hourly fall was 6.55 at Calhoun Falls on the 28th. The average number of days with rain was 15, ranging from 9 at Trenton to 21 at Liberty.

Excessive Precipitation.—Anderson, 27-28th, 5.35 in 41 hours; Calhoun Falls, 28th, 6.55 in 24 hours; Camden, 6-7th, 3.13 in 24 hours; Cheraw (1), 5-6th, 4.30 in 24 hours; Cheraw (2), 5-6th, 4.16 in 24 hours; Columbia, 6-7th, 2.64 in 24 hours; Florence, 25th, 4.65 in 24 hours; Gaffney, 5-6th, 3.80 in 24 hours; Greenville, 14-15th, 2.46 in 24 hours; Greenwood, 29th, 2.75 in 6 hours; Liberty, 5-6th, 3.25 in 25 hours, and on 13-14; 4.05 in 11 hours, and on the 31st, 1.91 in 1 hour; Longshore, 26th, 2.56 in 12 hours, and on the 28th, 3.71 in 3 hours; Spartanburg, 5-6th, 3.28 in 13 hours, and on 13-14th, 3.52 in 16 hours; Statesburg, 6-7th, 3.11 in 16 hours; Walhalla, 5-6th, 6.40 in 21 hours; Winthrop College, 6th, 3.40 in 12 hours.

Hail.—None reported.

Weather.—Average number of clear days 7, of partly cloudy days 14, and of cloudy days 10.

Winds.—The prevailing direction of the wind was from the south at 18 stations, from the southeast at 12, from the southwest at 7, from the west at 2, and from the north, northeast and northwest at 1 station each.

High Winds.—Beaufort 7th; Charleston 25th; Columbia 5-19-20; Longshore 5th; Walhalla 19th.

ERRATUM.—On page 5, of monthly report for July, 1901, Greenwood, mean temperature, recorded 81.2°, should be 81.7°.

## REMARKS BY OBSERVERS.

Longshore.—This August is the wettest one on record.—W. G. Peterson.

Summerville.—Mean relative humidity 86 per cent. There was a deficiency of 2.12 inches in precipitation and the mean temperature for the past month was 4.2° cooler than August, 1900.—Prof. Jno. Gadsden.

Batesburg.—There was an abundance of rain, and all crops look well. Last year half of the cotton crop was open by September 1st, but this year there is scarcely any open. Peas and young corn are promising.—E. J. Hite.

Santuc.—The month was an exceedingly wet one, and little farm work could be done, and many field abandoned. Broad river on the east and Tyger on the west maintained an overflow stage nearly the entire month. Roads were at time almost impassable.—E. W. Jeter.

Liberty.—The excessive rainfall rotted most of the fruit, blasted much growing corn, and caused early corn to sprout. Early cotton is opening, but is sprouting and rotting. Late cotton made too rank a growth. Peas and late corn did well. Sweet potatoes grew too much to vine.—J. T. Boggs.

Anderson.—Not much cotton open at the close of the month and some of it sprouting; bolls are rotting and shedding badly. Some corn sprouted in the husk. Water courses were extremely high and lands were badly damaged by the excessive rains of the month.—R. B. Dean.

Gillisonville.—The month was warm and wet, rains did much damage to corn fodder. Cotton improved early in the month, but shedding and rust developed during the latter portion. Picking began on the 20th. Fall army worms did much damage to grass. Peas, potatoes and sugar cane did well.—Sam P. Saltus.

Trenton.—The heavy rains toward the close of the month caused cotton to rust and to shed badly. Picking began during the month. A great deal of corn fodder was damaged by the rains. Precipitation 0.38 more than the 9-year average for August, and 4.24 inches more than the 8-year average for the 8 months since January 1st.—C. A. Long.

## MISCELLANEOUS PHENOMENA (with dates).

Lunar Halos.—Gillisonville, 23, 25; Society Hill; 30.

Solar Halos.—Charleston, 1; Gillisonville, Statesburg, 29; Walhalla, 14.

Dense Fogs.—Anderson, 11, 13, 20; Blackville, 3, 10, 13, 15, 26, 29, 31; Camden, 3, 8, 10, 15, 24, 26; Cheraw (2), 8,

15, 16, 21, 24, 26; Clemson College, 6, 10, 19, 23; Liberty, 20, 24, 25, 26; Santuc, 8; Society Hill, 10, 15, 16, 21, 24; Statesburg, 3, 9, 10, 11, 12, 15, 16, 19, 24, 25, 26, 29, 31; St. Stephens, 11; Trial, 26, 27, 30, 31; Walhalla, 13.

Thunderstorms.—Batesburg, numerous; Beaufort, 1, 2, 5, 6, 7, 8, 19, 23, 25, 27, 28, 29; Blackville, 1, 2, 5, 6, 7, 12, 13, 20, 24, 27, 28; Camden, 25; Charleston, 6, 8, 9, 17, 20, 23, 24, 25, 27, 28, 30; Cheraw (2), 2, 5, 6, 12, 13, 20, 24, 25, 27, 28, 30; Columbia, 1, 5, 6, 11, 13, 16, 19, 20, 23, 24, 28, 30; Darlington, 6, 24; Gillisonville, 1, 2 (4 to 9), 11, 13, 14, 19 (21 to 25), 27, 28, 29, 30; Liberty, 5 (10 to 16), (18 to 31); Little Mountain, 11 (10 to 14), 27, 28, 30, 31; Longshore, 6, 10, 11, 13, 14, 15, 16, 19, 21, 26, 28, 31; Santuc, 5, 6 (10 to 14), 16, 19, 23, 24, 27, 28, 31; Spartanburg, 5; Statesburg, 1, 6, 14, 20, 23, 24, 27, 28, 30, 31; Summerville, 5, 9; Trenton, 1, 5, 6, 14, 17, 20, 22, 27, 28, 29, 30; Trial, 6, 16, 19, 21, 23, 24, 25; Walhalla, 13, 15; Winthrop College, 2, 5, 10, 15, 20, 23, 24, 31; Yorkville, 6, 11, 13, 17, 20, 24, 25, 28, 31.

## THE GULF STREAM.

(Mill's "Realm of Nature," pages 178-179.)

The level of the Caribbean Sea and Gulf of Mexico is raised considerably by the hot surface water continually pouring in from the southeast. Off the mouth of the Mississippi it is about 3 feet higher than off New York—an effect which may, however, be due in part to the attraction of the land. The Gulf Stream forced out through this reservoir through the Strait of Florida is a river of salt and very warm water (surface temperature 81°), 50 miles wide, 350 fathoms deep, and flowing at the rate of 5 miles an hour. On emerging from the Strait it is swept to the north close along the American coast by the branch of the north equatorial current, which had passed outside the West Indies and through the Bahamas. The Gulf stream sweeps the bottom clear of mud not only in the Strait but for a considerable distance northward. As it flows on, it grows wider and shallower; off Cape Hatteras it curves away from the American coast and coming within the range of the prevailing southwesterly winds, it is carried eastward across the Atlantic, spreading out like a fan and growing cooler as it flows. The Gulf Stream passes to the south of the Grand Banks of Newfoundland with a velocity of about one and one-half miles per hour, and its rate gradually diminishes to about 4 miles a day in the general North Atlantic drift. This drift of comparatively warm water forks into three, diverging toward the coast of Spain, the British Islands, Norway, and the southeastern coast of Iceland, stranding driftwood on that treeless island. The surface water of the tropics is thus being steadily poured into the temperate North Atlantic, where it drives the cold deep water toward the south, and gives rise to the highest temperature at great depths found in any part of the open ocean. The temperature of 40° occurs as deep as 900 fathoms off the west of Scotland, and seldom deeper than 300 fathoms in the tropics. This is the source which supplies the southwest wind with heat and moisture to modify the climate of western Europe.

REPORT FOR SEPTEMBER, 1901.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

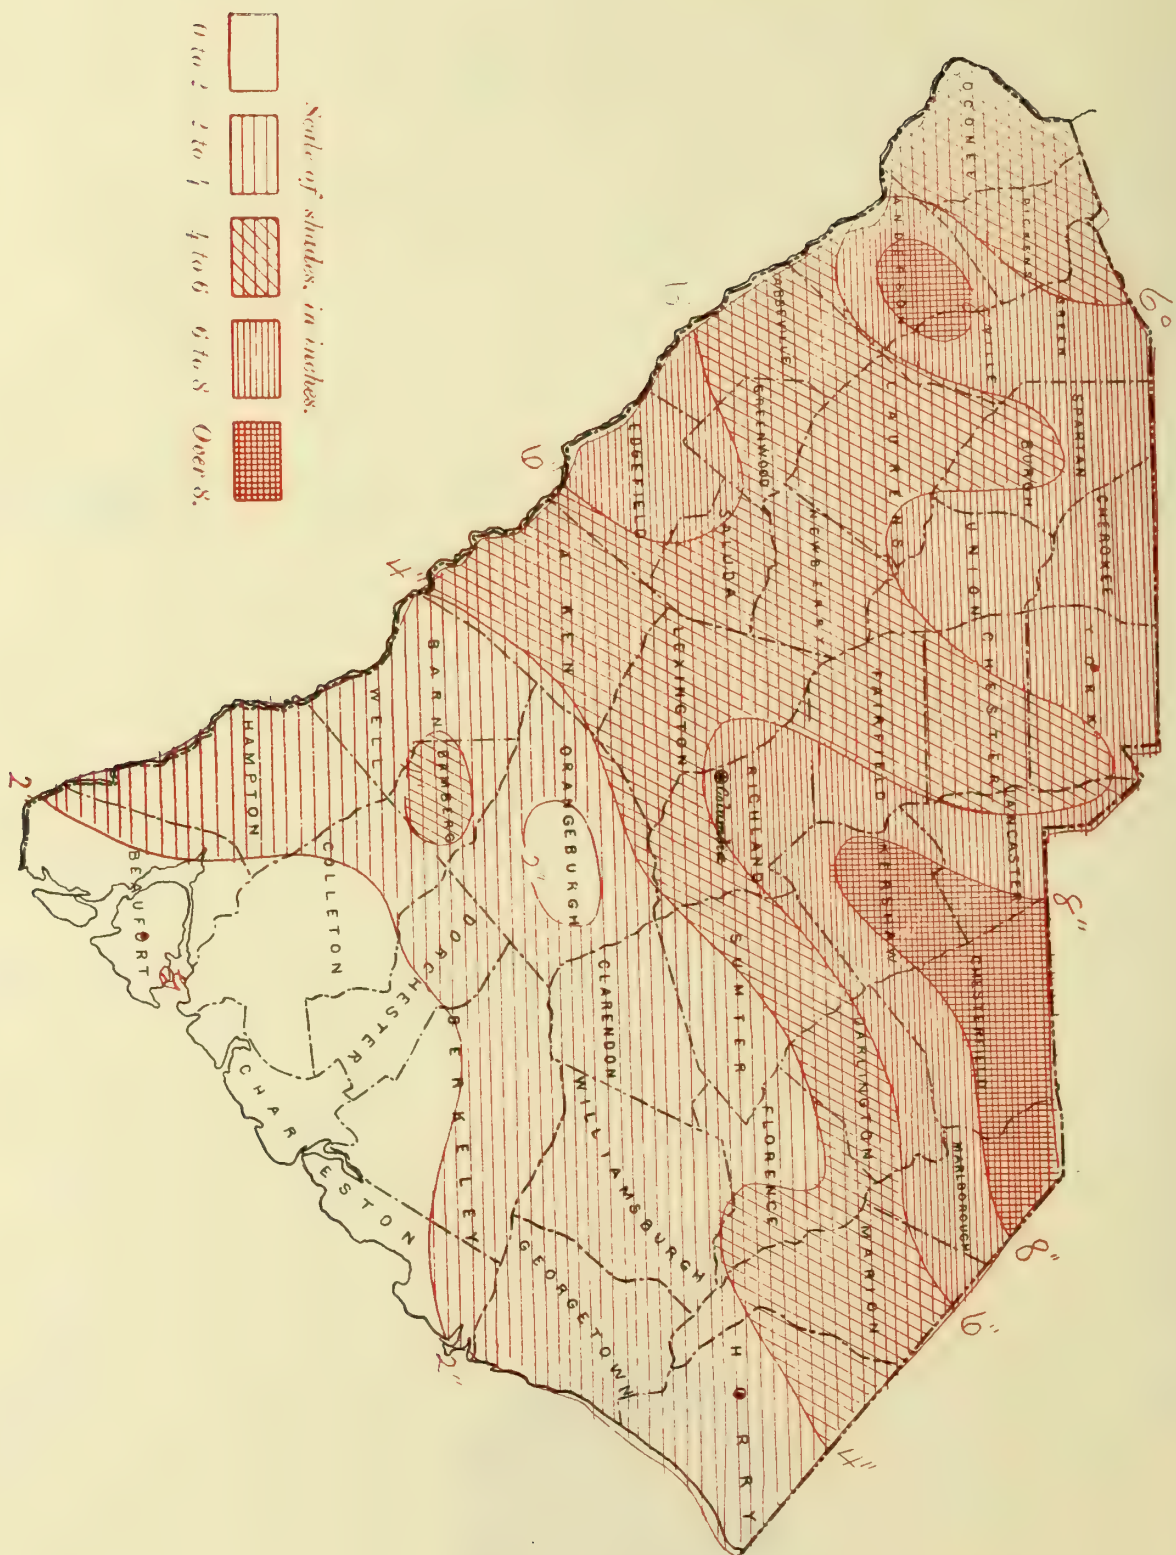

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

TOTAL PRECIPITATION FOR SEPTEMBER, 1901.

U. S. DEPARTMENT OF AGRICULTURE.

# CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., SEPTEMBER, 1901. No. 9.

### WEATHER AND CROPS.

The September weather conditions were not uniformly favorable on maturing crops, but were generally so. There was a deficiency in temperature, due to an abnormally cool period from the 18th to the 24th, during which the growth of crops was checked, and in the case of cotton, at a time when warm weather would have been of great value, as that crop is from three weeks to one month later than usual. Aside from the exception noted, the temperature was quite favorable.

In the matter of precipitation, September exhibited the same reversal of ordinary conditions as August did, in being much wetter over the western and northern portions than over the southeastern. Practically all, except a small portion, of the month's rainfall fell from the 16th to the 18th, during which period excessive amounts were recorded over all save about one-third of the State, the exception comprising the southeastern counties where the entire month's rainfall was deficient. In Charleston and Beaufort counties less than half an inch fell. This locality was dry during August, and the final result at the close of September was a drought of great severity, that was injurious to truck crops. Much seed that was planted in August rotted in the ground or failed to germinate, and many of the young sprouts that did come up died for lack of moisture. Sea-island cotton was also injuriously affected, as young bolls shriveled on the stalks.

Corn was generally gathered, but, as previously estimated, the yields were very poor. Rice harvest was nearly finished, but was interrupted by freshets in the rivers, which in connection with abnormally high tides on the 6-7th, and from the 24th to the 28th flooded rice fields in some sections; the yields were generally good, although in the Georgetown districts they were very unsatisfactory. Much hay was gathered in fine condition, as the average of 15 clear days gave the needed sunshine for curing the grass and pea-vines. Over the western and northern portions it was too wet for sweet potatoes, but was very favorable for peas.

Cotton opened rapidly during the first half of the month, and slowly thereafter, while its condition deteriorated throughout the entire month, owing to rust and shedding, induced by too much rain and the cool weather. In this connection it is

also probable that the bad effects of the wet weather during August manifested themselves during the month under review. The early, or bottom crop was poor, the middle crop heavy, while the prospects for a top crop are unfavorable. Pickers were plentiful, and the lint was gathered nearly as fast as the bolls opened.

September as a whole was favorable for gathering and harvesting, but was unfavorable for growing crops. The soil was in excellent condition for seeding oats and rye, and for plowing lands for wheat.

### CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for September, 1901, was 73.1°, which is 1.1° below the normal. The highest local mean was 77.8° at Beaufort, the lowest 67.6° at Greenville. The highest temperature was 98° at Gillisonville on the 14th, the lowest 46° at Santuc and Walhalla on the 22d and 19th, respectively, making the State range 52°. The greatest local monthly range was 50° at Seivern, the least 30° at Charleston. The mean of the daily maximum temperatures was 82.5°, and of the daily minimum temperatures was 63.7°.

Precipitation, in Inches.

The average precipitation was 4.52 inches, which is 0.25 above the normal. The precipitation was excessive over the northern portions and deficient over the southeastern. The greatest local amount was 8.40 at Cheraw (1), the least 0.30 at Bowman. The greatest 24-hourly fall was 6.17 at Society Hill on the 17-18th. The average number of days with .01, or more, of precipitation was 6, ranging from 1 at Bowman to 9 at Camden and St. Stephens.

Excessive Precipitation.—Anderson, 16-17th, 7.00 in 36 hours; Barksdale, 16-17th, 3.89 in 24 hours; Calhoun Falls, 18th, 2.80 in 24 hours; Camden, 17-18th, 5.02 in 24 hours; Cheraw (1), 18th, 3.40 in 24 hours; Cheraw (2), 17-18th, 3.34 in 24 hours; Clemson College, 17-18th, 2.55 in 24 hours; Columbia, 17-18th, 3.72 in 21 hours and 45 minutes; Darlington, 16-17th, 3.05 in 24 hours; Due West, 16-17th, 3.65 in 24 hours; Greenville, 17-18th, 3.65 in 24 hours; Greenwood, 17-18th, 2.95 in 24 hours; Liberty, 16-17th, 3.26 in 24 hours; Little Mountain, 17-18th, 3.58 in 23 hours; Santuc, 16-17th, 3.03 in 24 hours; Seivern, 17-18th, 5.71 in 24 hours; Society Hill, 17-18th, 6.17 in 24 hours; Trenton, 17-18th, 4.75 in 24 hours; Walhalla, 16-17th, 3.33 in 24 hours; Winnsboro, 16-17th, 2.80 in 24 hours; Yorkville, 16-17th, 4.40 in 24 hours.

Weather.—The average number of clears days was 15, partly cloudy 8, and cloudy 7.

Winds.—The prevailing direction of the wind was from the northeast at 26 stations, from the north at 5, from the south at 4, from the east, southwest and west at 2 each, and from the southeast and northwest at 1 each.

High Winds.—Barksdale 26, Beaufort 17, Blackville, Gillisonville 18, Charleston 26-27, Columbia 16-17-18-27, Con-

way 27, Liberty 15-16-27, Little Mountain 16, Longshore 18-26-27, Walhalla 25-26-27.

#### ERRATA.

July report, page 6: Cheraw (1), mean minimum temperature,  $73.6^{\circ}$ , should be  $71.6^{\circ}$ ; page 5: mean temperature,  $81.4^{\circ}$ , should be  $80.4^{\circ}$ .

August report, page 5: Batesburg, minimum temperature,  $67^{\circ}$  on the 25-31st, should be  $66^{\circ}$  on the 2-3d. Page 6: Clemson College, mean maximum temperature,  $82.5^{\circ}$ , should be  $85.3$ , and on page 5, mean temperature,  $74.6^{\circ}$ , should be  $76.0^{\circ}$ . Page 5: Florence, mean temperature,  $80.7^{\circ}$ , should be  $80.6^{\circ}$ .

#### MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 7, 8, 16.

Lunar Halos.—Blackville, Charleston, 26; Gillisonville, 23, 24, 25, 26; Statesburg, 28.

Thunderstorms.—Beaufort, 1, 2, 16, 17; Blackville, 12, 15, 16; Bowman, Due West, Little Mountain, Santuc, Yorkville, 16; Camden, 17, 18; Charleston, 2, 3; Cheraw (2), 1, 16, 17, 28; Columbia, 16, 17; Gillisonville, 1, 3, 14, 16; Liberty, 10, 12, 16, 17; Longshore, 16, 17, 29; Society Hill, 17; Statesburg, 15, 16, 17, 18; Trenton, 9, 16, 17; Trial, 14.

Fogs, Dense.—Beaufort, Seivern, 30; Blackville, 11, 17; Bowman, 8; Camden, 8, 10, 11; Charleston, 10, 30; Clemson College, 12; Conway, Edisto, 11; Effingham, 16; Gillisonville, 3, 11, 12, 30; Liberty, 1, 11, 29; Little Mountain, 28; St. Stephens, Society Hill, 10; Santuc, 1, 10; Statesburg, 1, 10, 28, 30; Trial, 9, 10; Walhalla, 15; Yorkville, 1, 10, 13.

#### REMARKS BY OBSERVERS.

Batesburg.—The month was exceptionally fine for gathering crops. Cotton opened rapidly, and half the crop is already open. There were a few cool days.—E. J. Hite.

Society Hill.—The weather during the month has been favorable for harvesting cotton and hay, save the excessive rainfall on the 17-18th which was damaging to both crops.—Maj. J. J. Lucas.

Anderson.—The last week was fair for picking cotton, that was then opening fast; all cotton is three or four weeks late. Minor crops are doing well. No corn has been gathered at close of month.—R. B. Dean.

Barksdale.—The special feature of the month was the variability of the temperature. Dews were heavy and the rainfall abundant. Cotton is late, and only a few bales have been picked. Much hay was cut.—E. E. Putnam.

Gillisonville.—Month cool and dry. After the first few days, cotton failed rapidly. Peas and sugar cane improved.

A splendid crop of hay was secured in fine condition. Gardens were injured at close of month.—Sam P. Saltus.

Beaufort.—The mean temperature was  $0.2^{\circ}$  above the normal; the rainfall 5.58 inches below. The long continued drought is causing bolls on late cotton to shrivel, and is seriously injuring turnips, fall gardens and pastures.—S. M. Benton.

Liberty.—The weather was fairly favorable during the month for saving hay and fodder. The hay crop, both grass and pea-vines, was unusually fine and the quantity saved was larger than usual, while there is still much to harvest.—Jno. T. Boggs.

Santuc.—The month was unfavorable for outdoor work. One thunderstorm for the month, on the 16th. From the afternoon of the 16th to the 18th, a period of 48 hours, 5.45 inches of rain fell. Streams were much swollen.—E. W. Jeter.

Trenton.—Cotton is below an average crop in condition. Heavy rains from the 16th to the 18th damaged open cotton, and hay. Corn and sweet potatoes are poor; peas are fair. Precipitation was 2.60 more than the 9-year average for September, and 7.90 more than the 8-year average for the first 9 months of the year.—C. A. Long.

Summerville.—Northeast winds prevailed on 17 days. The deficiency of rainfall for the month was 2.97 inches. There were six earthquake vibrations, two decided ones, and one almost imperceptible the record of which is not given; they occurred as follows: 8th, 1.38 a. m.; 14th, 8.26 a. m.; 16th, 12.06 p. m.; 17th, 8.35 a. m.; and a very slight one on the 28th, 8.25 p. m.—Prof. Jno. Gadsden.

#### EDITORIAL NOTE

Attention is directed to the first reports from the newly established voluntary observing stations at Barksdale, Laurens county; Bowman, Orangeburg county; Conway, Horry county; Due West, Abbeville county; Gaffney, Cherokee county, and Seivern, Aiken county. The number of stations will be still further increased as there are a number of counties that as yet have no stations.

The season is close at hand for the occurrence of frost, and as the dates of the first light, heavy, or killing frost in the fall of the year are among the most valuable, and most often called for data that are recorded by voluntary observers, they are reminded of the importance of a record of such data. After the occurrence of the first killing frost, no frost need be recorded until March 1st, although there can be no objection to your doing so, except along the immediate coast where on some years no frosts occur after January. As this comprises the early truck raising regions, a record of all frosts that occur is valuable.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR OCTOBER, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., OCTOBER, 1901. No. 10.

## WEATHER AND CROPS.

Although October usually has a larger percentage of sunshine than any other month, the current month was exceptional in this respect, having had an average of but three cloudy days; and also for the small amount of precipitation—every station reporting a deficiency—and the evenness of its distribution. There was a large, wedge-shaped area in the west-central portion of the State, with its base resting on the Savannah river, and reaching to the North Carolina border, that had slightly more than an inch of rainfall; another small area covering parts of Bamberg and Orangeburg counties, another very small area covering portions of Dorchester and Berkeley counties, and a considerable area centering on Smiths Mills, had over an inch of rainfall, while the rest of the State had less than an inch. Practically all of the precipitation occurred on the 1-2nd, and 13-14th. Along the immediate coast, the pre-existing drought increased in severity, to the injury, and almost ruination, of fall truck crops.

The temperature range for the month was between a maximum of 92° and a minimum 29°. The daily range was greater than usual, or expressed differently, the days were warm and the nights cool. There were two frost periods. The first from the 3rd to the 6th, during which light frosts occurred in the extreme western and northern portions only; the second from the 15th to the 19th, gave light frosts over the entire State. Heavy to killing frosts occurred on the 19th over the south central and eastern counties. Except where killing frost occurred, the injury by frost was confined principally to killing sweet potato vines, but the frost stopped further growth of cotton after the 19th, although nearly full-grown bolls were not injured.

The month was favorable for outdoor work, and rapid progress was made in gathering crops. The corn crop confirmed the previous estimate of very poor yields. Rice harvest was finished, and owing to the fine weather the yields were larger than anticipated. The October hay crop was the largest in many years, and it was saved in prime condition. Cotton picking made good progress and was nearly finished over the eastern counties, but, owing to the lateness of the plants, over the western counties picking was not nearly finished at the

close of the month. Bolls opened slowly in those sections, early in the month, but the unusually favorable weather undoubtedly helped late cotton to come to maturity and materially increased the yields.

The ground was in fairly good condition for plowing, over the western counties, during the first half of the month, and for seeding oats, but the latter half was too dry for this work over the whole State, and oats sown after the 15th came up to poor stands. No wheat was sown, but considerable land was prepared for wheat.

## ERRATA

September Monthly Report, on page 5, the maximum temperature at Barksdale, 90° on the 14th, should be 91° on the 15th. On pages 5 and 8, Effingham, total precipitation 4.90, should be 4.95; Winthrop College, total precipitation 4.75, should be 4.73. On page 5, the name of the station, Lugog should be Lugoff.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for October, 1901, was 62.4°, which is 1.6° below the normal. The highest local mean was 67.8° at Beaufort, the lowest 58.0° at Greenville and Walhalla. The highest temperature was 92° at Seivern on the 1st, the lowest 29° at Seivern on the 19th, making the State range 63°. This was also the greatest local range. The least local range was 34° at Charleston. The mean of the daily maximum temperatures was 74.9°, of the daily minimum temperatures was 50.0°, making an average daily range of 24.9°.

Ice, first of season.—Seivern on the 19th.

Frost, first light of the season.—On the 3d, Clemson College; on the 4th, Darlington, Gaffney, Inman, Leslie, Middle Saluda, Rock Hill, Santuc, and Spartanburg; on the 5th, Baker, Camden, Fairfax, Longshore, and Newberry; on the 6th, Chesterfield, Greenville, and Lugoff; on the 15th, Abbeville, Anderson, Liberty, and Spencer; on the 16th, Bowman, Conway, Gillisonville, Seivern, Statesburg, Temperance, and Trenton; on the 18th, Cheraw, Edisto, Effingham, Little Mountain, St. Stephens, and Smiths Mills; on the 19th, Beaufort, Blackville, Columbia, Kingstree, St. George, St. Matthews, Sharpe, Society Hill, Winthrop College, and Yemassee.

Frost, first heavy of season.—On the 15th, Gaffney; on the 19th, Camden, Cheraw, Conway, Edisto, Effingham, St. Stephens, Santuc, and Smiths Mills; on the 20th, Longshore.

Frost, first killing of the season.—On the 19th, Bowman, Denmark, Lugoff, Samaria, Seivern, Trial, and Windsor; on the 20th, Gillisonville.

## Precipitation, in Inches.

The average precipitation was 0.89 of an inch, which is 2.33 below normal. The deficiency extended over the entire State, but drought conditions are most severe along the immediate coast. The greatest local amount was 2.86 Trenton, the least "T" at Georgetown. The greatest 24-hourly fall was 2.10 at

Smiths Mills on the 13-14th. The average number of days with .01, or more, of precipitation was 3, ranging from 0 at Georgetown to 7 at Charleston.

Weather.—The average number of clear days was 22, of partly cloudy 6, and of cloudy ones 3.

Winds.—The prevailing direction of the wind was from the northeast at 25 stations, from the north at 6, from the east at 5, from the west at 3, and from the south and northwest at 2 each.

High Winds.—Barksdale 25-29th; Charleston 7th; Liberty 18-19-29th-30-31st; Walhalla 1-17-30.

#### MISCELLANEOUS PHENOMENA (with dates).

Earthquake.—Longshore, 1st, 11.40 a. m.

Solar Halos.—Charleston, 13, 14, 20.

Lunar Halos.—Columbia, 19; Greenville, 26.

Fogs, dense.—Bowman, St. Stephens, 12; Charleston, 1, 3, 28; Cheraw, 2; Little Mountain, 30; Statesburg, 2, 12.

Thunderstorms.—Barksdale, Santuc, Yorkville, 2; Beaufort, 1, 2, 13; Blackville, Bowman, Gillisonville, Liberty, 1, 2; Charleston, 1, 13; Columbia, Statesburg, Trenton, 1; Greenville, 1, 12; Longshore, 12; Seivern, 2, 12.

#### REMARKS BY OBSERVERS.

Yorkville.—Some light frosts were reported in the neighborhood, but none were seen at this place.—J. R. Schorb.

Walhalla.—The smallest rainfall for any month on record since 1896, except for December, 1896, that had the same amount—0.55 of an inch.—S. M. Pagan.

Trenton.—Precipitation 0.96 less than the 9-year average for October, and 7.24 inches more than the 8-year average for the first 10 months of the year.—U. A. Long.

Batesburg.—The month has been very warm, and much more cotton has been made than was expected on the first of the month, on account of the fine weather.—E. J. Hite.

Society Hill.—Light frost on the morning of the 19th killed sweet-potato vines. The hay crop—pea vines and crab grass—is unprecedentedly large; all other crops short.—Maj. J. J. Lucas.

Lugoff. Cotton and corn were gathered. More hay housed this month than there has been for years, in this section. Very dry and dusty. Crops giving poor yields.—W. J. Burdell, M. D.

Barksdale.—The month was an exceedingly dry one, and gave beautiful weather for gathering crops. Most of the cotton has been picked. Corn and peas are good this year.—E. E. Putnam.

Summerville.—Deficiency in rainfall for the month 4.94; deficiency since August 1st 10.03 inches. General direction of the wind was northeast. Mean relative humidity 77.4 per cent.—Prof. Jno. Gadsden.

Santuc.—There were no general killing frosts, but in small areas vegetation was killed; there were several light frosts. The month was mostly clear and dry, excellent for farmwork. Much oats was sown.—E. W. Jeter.

Little Mountain.—Time of daily observations is 8 p. m. The month was very favorable for sowing oats, and stands are fine. The corn crop is housed, the smallest yield ever gathered in this section.—Jno. M. Sease, M. D.

Liberty.—Fine weather for saving hay, and all matured crops. Much late cotton in this section has opened very slowly, and yield is light; no top crop. Wheat being sowed. Fall oats look well where sown early.—John T. Boggs.

Anderson.—This has been a month of fine weather for gathering crops. The finest October weather ever known for cotton to open, yet the general complaint is that cotton is not opening well. The ground is dry and hard.—R. B. Dean.

Beaufort.—Excess in temperature for October is 232°. Accumulated deficiency in temperature since January 1st 362°. Deficiency in rainfall for October 2.80; deficiency since July 1st 13.58; deficiency since January 1st, 7.34 inches.—S. M. Benton.

Bowman.—Weather was unusually favorable for gathering crops, especially hay of which a large quantity has been housed. Some late cotton still to open. Potato vines, and all other tender vegetation killed by frost on the 19th.—B. O. Evans.

Gillisonville.—Month cool and dry, with killing frost on the 20th. Weather favorable for harvesting. Corn yield is less than half a crop. An unusually large crop of peas. An abundance of pea-vine and common grass secured as hay in excellent condition. Cotton backward. Too dry for gardens.—Sam P. Saltus.

Statesburg.—Deficiency of moisture has had a very disastrous effect on the cotton crop in retarding the late growth, and preventing the fruit from attaining a full maturity. The light frosts of the 16-19th nipped sweet-potato vines and other tender vegetation on low ground, but on hill tops and on undulating land tender vegetation was not injured. A few robins were seen on the 22d.—W. W. Anderson, M. D.

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

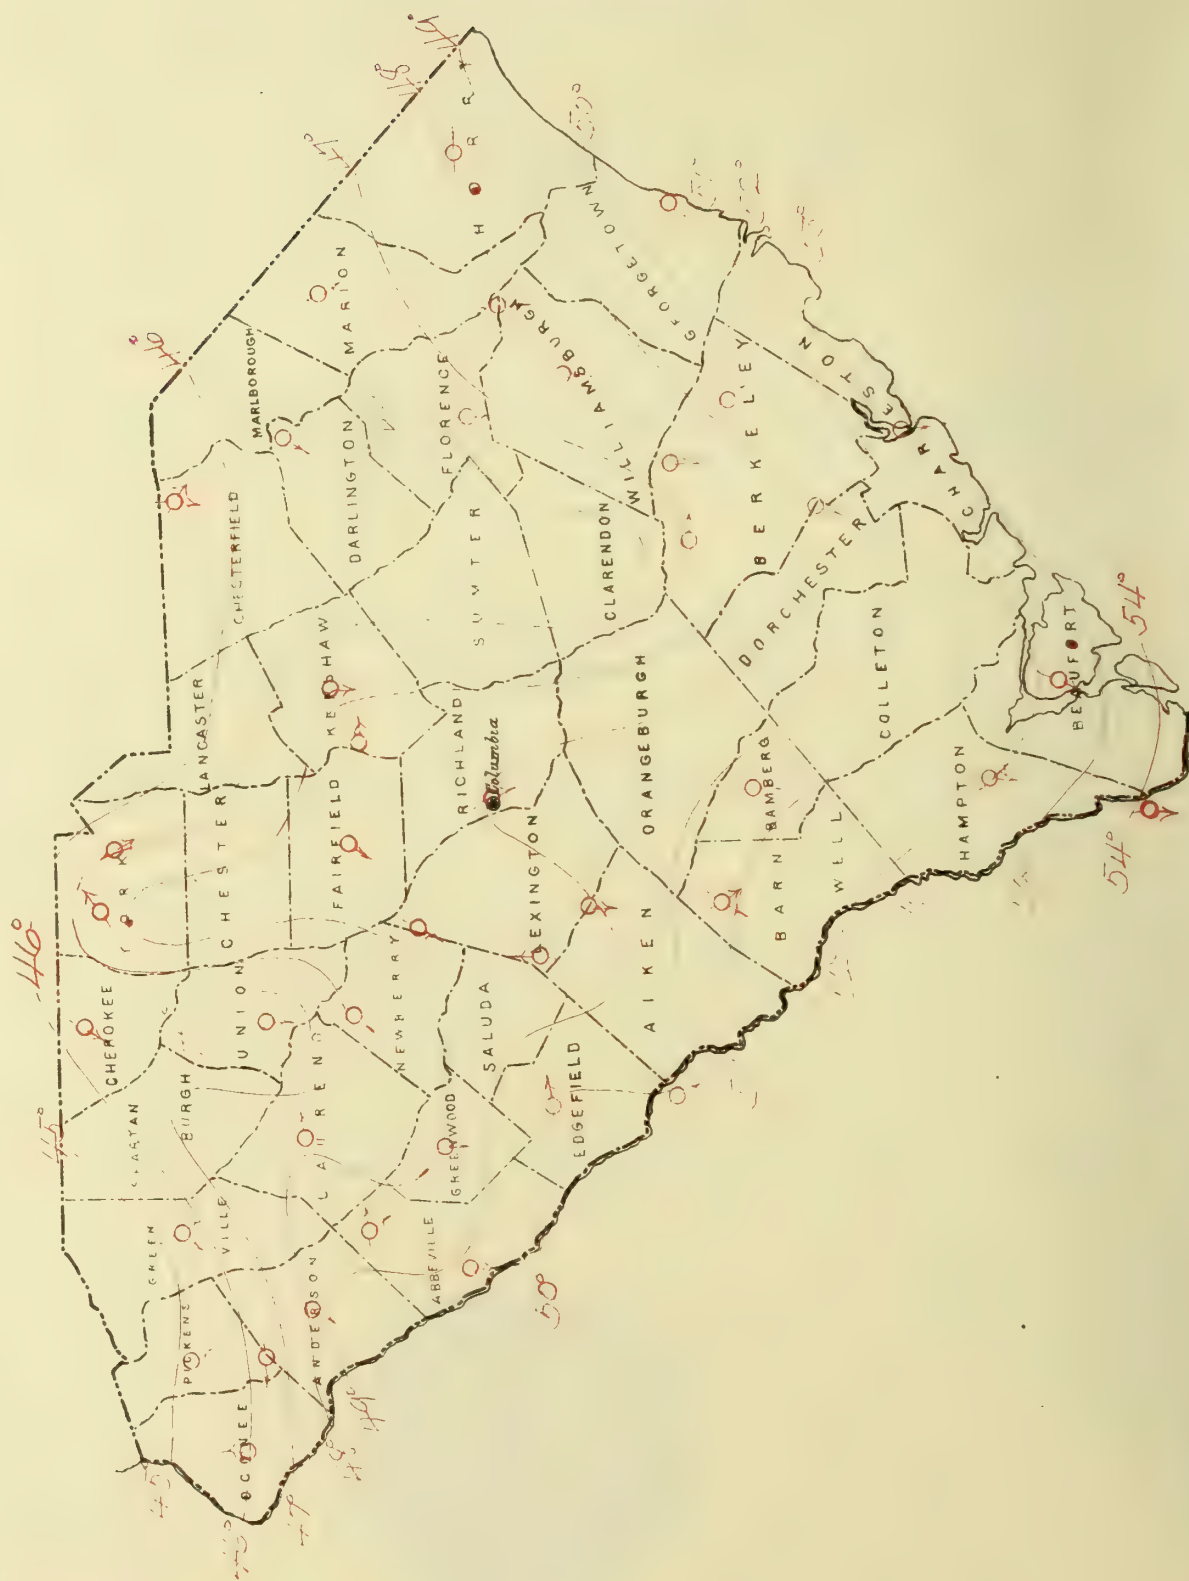

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR DECEMBER, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., NOVEMBER, 1901. No. 11.

## CLIMATE AND CROPS.

The chief characteristics of November, 1901, were the low temperature, small precipitation, and the snowstorm of the 19th. The records of the regular Weather Bureau, and voluntary observing stations, some of them covering a period of over thirty years, do not show as low a mean temperature for the same month. This was due largely to the cool nights.

With the possible exceptions of the years 1886 and 1887, that mark the beginning of the good work being done by voluntary observers, and for which years the records are fragmentary, the month under review was also the driest November of record, while the snowstorm on the 19th was unprecedented, having been the earliest as well as the heaviest one on record for November.

Nevertheless, the month was justly considered a pleasant one, with little cloudiness, cool, bracing air, much bright sunshine, many frosty mornings, and generally light winds.

The first general killing frost of the season occurred on the 7th, and this about corresponds with the average date of first killing frost in South Carolina. Thereafter frost occurred frequently to the close of the month, at times with freezing temperature and thin ice. Vegetation was killed by the frost of the 7th, and fields became brown-hued, while the forests of oak, maple and gum trees became vari-colored in their gorgeousness, resembling the autumnal forests of more northerly latitudes.

Cotton continued to open after the first frost, but all half grown, and many full grown bolls became mushy and rotted after the killing frost touched them, materially reducing the yield of the top-crop that had looked promising over the western portions of the State. Although picking made rapid progress, it was not entirely finished by the close of the month.

The ground was too dry for favorable germination of oats and wheat, and even for plowing and preparing lands for these grains, except in a few localities where the rainfall was heaviest, and there seeding progressed rapidly. The amount of wheat and oats actually sown this November, and the acreage of the lands already prepared for these grains, are less than usual, owing to the droughty conditions, and the

lateness of much of the cotton, all of which has not been picked on lands intended to be sown to fall grains.

The truck region along the southeastern coast suffered seriously from the continued drought, which was unrelieved during the month, although some showers occurred that were extremely beneficial.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for November, 1901, was 48.2°, which is 6.0° below the normal. The highest local mean was 53.8° at Beaufort; the lowest 43.2° at Greenville. The highest temperature was 85° at Blackville and Temperance on the 1st; the lowest 17° at Lugoff, Seivern and Walhalla on the 29th, 18th and 16th, respectively, making the State range 68°. The greatest local monthly range was 66° at Darlington; the least 45° at Trenton. The mean of the daily maximum temperatures was 60.2°; of the daily minimum temperatures 36.2°. This was the coldest November of record.

Frost, first killing of the season.—On the 5th at Clemson College; on the 6th at Anderson, Barksdale, Darlington, Greenville, Greenwood, Liberty, Santuc, Society Hill, Spartanburg, Walhalla, Winthrop College and Yorkville; on the 7th at Beaufort, Camden, Cheraw, Columbia, Conway, Edisto, Effingham, Gaffney, Georgetown, Kingstree, Longshore, Pinopolis, St. George, St. Matthew, St. Stephens, Smiths Mills, Temperance and Yemassee; on the 15th at Allendale, Summerville and Winnsboro; on the 16th at Batesburg, Charleston, Due West, Statesburg and Trenton.

## Precipitation, in Inches.

The average precipitation was 1.01 inches, which is 1.84 below the normal. The amounts were quite evenly distributed, and were due to four general rainy periods, viz: on the 4-5th, 12th, 19th (snow in the western, central and northern counties), and 23d. No excessive precipitation occurred except at Georgetown which station had 3.00 inches in 24 hours on the 23d. Greatest local amount 3.10 at Georgetown; least 0.36 at Winnsboro. The average number of days with rain was 5, ranging from 2 at Georgetown to 7 at Charleston.

Hail.—Hail or sleet occurred at 5 stations on the 23d.

Sleet.—The storm on the 19th began as sleet at most points and turned into snow over a large portion of the State.

Snow.—Snow fell on the 19th to an average depth of 0.6 of an inch, with a maximum fall of 5.4 inches at Batesburg. This was the heaviest November snowstorm of record. In the western portions of the State, trace of snow remained on the ground until the 23d, on northern slopes crowned by woodlands.

Weather.—The average number of clear days was 21, partly cloudy 4, and cloudy 5.

Winds.—The prevailing direction of the wind was from the north and northwest at 15 stations each, from the northeast at

11, from the west at 7, from the south at 2, and from the east and southwest at 1 each.

High Winds.—Barksdale 14, Charleston 10th; Columbia 12-23-24th, Gillisonville 23-24th, Liberty 12-13-24-25-29th, Lugoff, Temperance 24th, Walhalla 12-13-14-15-25-26-29th.

#### EDITORIAL NOTE

New elevation data have been entered for nearly every station, on page 5 of this report, and the data as now published are approximately correct, and agree with Gannet's Dictionary of Altitudes in the United States. Some of the stations are, however, not on lines of railroads, and at such places the elevations have been approximated, after extensive correspondence.

#### MISCELLANEOUS PHENOMENA (with dates).

Aurora.—Liberty, 19.

Parhelion.—Liberty, 19.

Fogs, dense.—Beaufort, 9.

Lunar Coronæ.—Lugoff, 14, 18; Santuc, 27.

Lunar Halos.—Charleston, 22, 23, 24; Columbia, 22; Walhalla, 21, 22.

Thunderstorms.—Cheraw, Society Hill, 12; Liberty, Lugoff, Santuc, 23.

Solar Halos.—Charleston, 4, 7, 9, 22, 24, 27; Santuc, Statesburg, 27; Walhalla, 22, 27.

Ice, first of season.—Beaufort, 18; Blackville, 6; Charleston, 17; Conway, 13; Statesburg, 16; Temperance, 7.

Smoke, dense.—Barksdale, 2; Blackville, 9; Liberty, 1, 2, 3, 4, 5, 8, 9, 10, 11, 28; Statesburg, 9, 10, 11, 24.

#### REMARKS BY OBSERVERS.

Longshore.—The month was rather cool but afforded good weather for gathering crops.—W. G. Peterson.

Statesburg.—First half of month was mild and pleasant, the latter half cold and inclement.—W. W. Anderson, M. D.

Batesburg.—A very pleasant month throughout. There was very little rain. Snow fell all day on the 19th, but it melted as it fell.—E. S. Hite.

Little Mountain.—A large acreage of wheat and oats has been sown; stands are satisfactory. The early oats is suffering from the hessian fly.—J. M. Sease, M. D.

Society Hill.—Planting of small grain has been greatly delayed by drought conditions, and stiff soils are as yet too hard to plow to advantage.—Maj. J. J. Lucas.

Barksdale.—The month has been dry and cold. The ground is hard and dry. Farmers have sown some wheat. The killing frost of the 6th did little damage.—E. E. Putnam.

Walhalla.—Precipitation 3.05 inches below the normal. The minimum temperature of the 16th is lowest on record for any November. Mean temperature was 5.1° below the normal.—S. M. Pagan.

Bowman.—November was quite remarkable. Clear and cold nearly all the time. Unusually favorable for hog-killing. Much small grain was planted nearly all of which came up nicely.—B. O. Evans.

Summerville.—Average relative humidity 73 per cent. Deficiency of rainfall for November 2.51 inches, and since July 1st the deficiency is 12.54 inches. The drought becomes alarming.—Prof. Jno. Gadsdens.

Gillisonville.—Month dry and cold, unfavorable for fall seeding; condition of oats varies with the distribution of showers. Cotton all picked; less than half a crop was made. Gardens completely ruined.—Sam P. Saltus.

Blackville.—First ice formed on the 6th. Wheat, oats and rye need rain. Some seed have not come up owing to lack of moisture. Mean temperature 4.1° below normal, and precipitation 1.01 below normal.—G. D. C. Lange.

Trenton.—Precipitation 1.77 inches less than the 9-year average for November, and 5.68 inches more than the 8-year average for the first 11 months of the year. Warm weather is needed to bring up small grain.—C. A. Long.

Santuc.—The month was notable for the number of white frosts from the 16th to the close. There were more than ever before recorded in November. The month generally was clear, cold, frosty, and too dry for seeding fall grains.—E. W. Jeter.

Liberty.—Another very favorable month for gathering crops. It was too dry for sowing wheat until after the 23d, when rain softened the ground. Wheat has not come up. Cotton will not make over half an average crop.—Jno. T. Boggs.

Anderson.—On the 19th there was a heavy fall of snow, but it melted almost as fast as it fell. November gave pleasant weather. Much cotton is not yet open; very little wheat has been sown as the ground is too dry and lands have not all been cleared of cotton.—R. B. Dean.

Beaufort.—The mean temperature was 5.5° below the normal, and was even lower than the December normal by half a degree. Precipitation was 0.89 below the normal, and since September 1st is 9.36 inches below the normal, making it the driest autumn on record. On the 16th and 17th, forest fires spread over large areas and did much damage.—S. M. Benton.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR DECEMBER, 1901.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

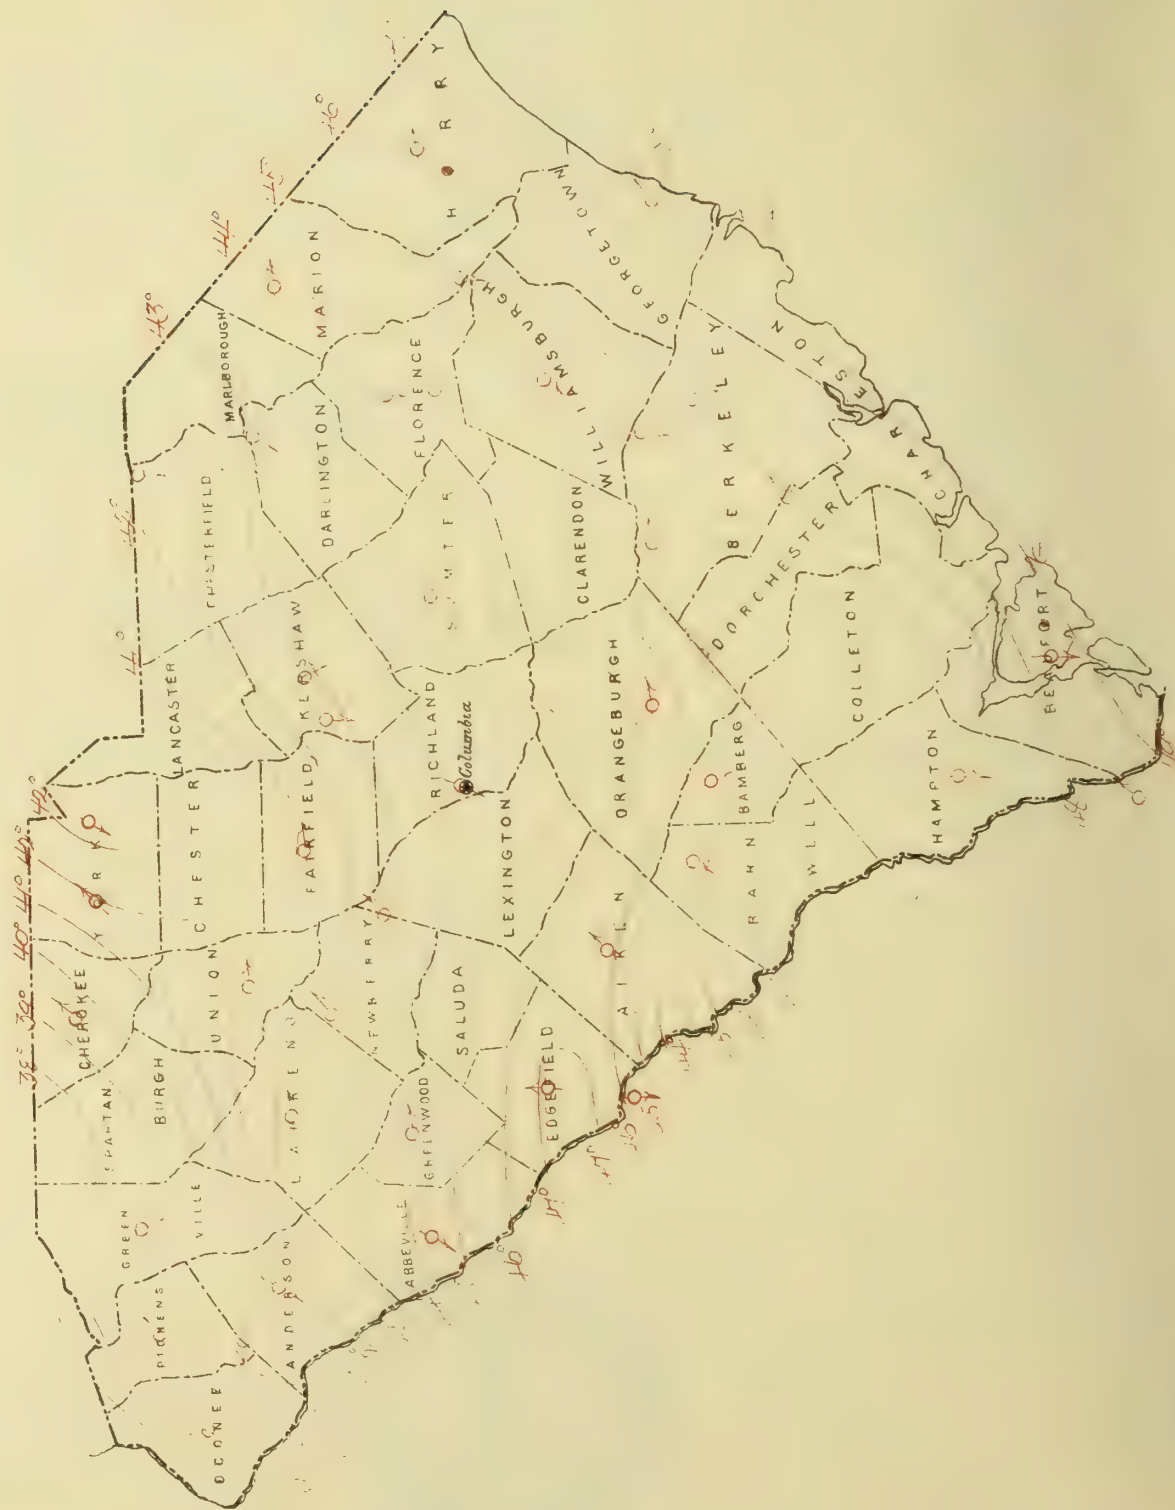

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR DECEMBER, 1901.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. IV. COLUMBIA, S. C., DECEMBER, 1901. No. 12.

## CLIMATE AND CROPS.

The weather during the month was generally unfavorable on agricultural interests. Wheat sowing, which had been previously delayed by dry weather and other causes, was still further delayed by too much rain and the fact that the ground was frozen during a large portion of the time, rendering the soil unfit. In the extreme western portion, there were only three or four days on which wheat could be sown, but the number increased eastward until near the coast where the conditions were more favorable, except that the temperature was too low at times. Truck suffered severely, having been killed at places, while generally it was too cold, and at points on the coast, too dry for favorable growth. Oats were largely winter-killed during the freeze from the 15th to the 22d, and at the close of the month bottom land oats were injured by floods. Oats on light sandy soils seem to have suffered more injury from the freeze than those planted on heavier soils. There would be much resowing of oats were it not for the scarcity and the high price of seed oats.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean for December, 1901, was  $44.0^{\circ}$ , which is  $2.2^{\circ}$  below the normal. The highest local mean was  $49.4^{\circ}$  at Beaufort, the lowest  $36.9^{\circ}$  at Greenville. The highest maximum was  $80^{\circ}$  at Blackville on the 25th, the lowest minimum was  $2^{\circ}$  degrees at Liberty on the 21st, making the State range  $78^{\circ}$ . The greatest local monthly range was  $69^{\circ}$  at Sumter, the least  $51^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $54.4^{\circ}$  and of the daily minimum temperatures was  $33.5^{\circ}$ .

Ice.—Ice occurred as far eastward as the coast, with a thickness of two inches at Beaufort, and at Conway Kingston lake was frozen over with ice two-thirds of an inch thick. The ground was frozen to a depth of nearly two inches by the 22d, near the central part of the State.

Precipitation, in Inches.

The average precipitation was 5.01 inches, which is 1.91 above the normal. The precipitation was heaviest, with over ten inches, in the extreme northwestern portion, from whence there were gradually decreasing amounts towards the south-

eastern portion, where between one and two inches fell, and where the pre-existing drought was only partially relieved. The greatest local amount was 10.23 inches at Spartanburg, the least 1.28 at Gillisonville. The greatest 24-hourly fall was 5.10 inches at Liberty on the 28-29th. The average number of days with rain was 11, ranging from 4 at Winnsboro to 17 at Columbia.

Sleet.—Sleet occurred on the 5th at Blackville, Georgetown, Summerville and Trial; on the 16th at Charleston; on the 19th at Beaufort; on the 22d at Clemson College; on the 23d at Liberty and Spartanburg; on the 22-23d at Walhalla.

Snow.—Snow was recorded in the State on the 5th, 6th, 16th, 17th and 19th. With the exception of the snowfall on the 19th, that stayed on the ground until about the 22d, it melted as it fell. The heaviest fall was also on the 19th, with depths varying from "trace" to over two inches. The average depth of unmelted snowfall for the State was 0.7 of an inch, with a maximum depth of 3.5 inches at Greenville.

Excessive Precipitation.—Barksdale, 29th, 3.30, in 24 hours; Clemson College, 28th, 3.97, in 24 hours; Gaffney, 28-29th, 3.30, in 24 hours; Greenville, 28-29th, 3.83, in 24 hours; Greenwood, 14th, 2.75, in 7 hours; Liberty, 28-29th, 5.65, in 38 hours; Longshore, 28th, 2.74, in 18 hours; Santuc, 28-29th, 2.50, in 24 hours; Spartanburg, 28th, 3.50, in 24 hours; Statesburg, 28th, 2.72, in 18 hours; Walhalla, 28-29th, 3.00, in 24 hours.

Weather.—The average number of clear days was 13, partly cloudy 5, and cloudy 13.

Winds.—The prevailing direction of the wind was from the north at 11 stations, from the west, northeast and southwest at 9 each, from the northwest at 7, from the south at 3, and from the east at 1.

High Winds.—On the 14th at Blackville, Bowman, Charleston, Liberty, Little Mountain and Walhalla; on the 16th at Barksdale; on the 3d, 9th, 14th and 28th at Beaufort; on the 10th, 14th, 15th, 23d, 25th and 30th at Columbia; on the 9th, 15th and 16th at Gillisonville; on the 23d at Lugoff.

## MISCELLANEOUS PHENOMENA (with dates).

Aurora.—Beaufort, 4.

Sundog.—Liberty, 16.

Solar Halos.—Charleston, 2, 11, 12, 21, 23.

Thunderstorms.—Aiken, Blackville, 23; Charleston, 9; Longshore, 14.

Earthquake.—On the 1st at Lugoff, 8 p. m.; Statesburg, 7:20 p. m.; Summerville, 7:35 p. m., slight tremor.

Lunar Halos.—Blackville, 2; Charleston, 22, 23; Columbia, Little Mountain, Santuc, Walhalla, 22; Gillisonville, 23, 25; Liberty, 4; Society Hill, 27; Statesburg, 25, 26; Sumter, 18, 19.

Fogs, Dense.—Anderson, Kingstree, 25; Barksdale, 26; Beaufort, 1, 24; Charleston, 2, 3, 24, 25, 26, 27; Clemson College, 27, 30; Cheraw, 3, 24, 26; Edisto, St. Stephens, 24, 25; Gaffney, Santuc, 24, 26; Gillisonville, 13, 25; Liberty, 24, 25, 26; Little Mountain, 23, 24; Longshore, 3, 24; Society Hill, 23; Statesburg, 24, 28; Walhalla, 23, 26.

## REMARKS BY OBSERVERS.

Little Mountain.—Oats were badly damaged by cold, but wheat was not injured.—J. M. Sease, M. D.

Longshore.—This was the coldest December on record at this station. Oats were nearly all killed.—W. G. Peterson.

Sumter.—The snowfall of 19th measured 1.4 inches and was exceedingly light, the melted equivalent was only 0.04 of an inch as caught by the rain gage.—Prof. W. A. Buckner.

Batesburg.—The first and last portions of the month were pleasant, while the middle portion was very cold. Little or no farmwork was done during the month.—E. J. Hite.

Barksdale.—The month was very cold. Wheat is late in germination and growth; early fall oats are very good. The cotton crop has all been gathered.—E. E. Putnam.

Trenton.—The mean temperature was  $2.8^{\circ}$  less than the normal; the precipitation was 2.34 inches more than normal for the month, and for the year is 7.47 inches more than the normal.—C. A. Long.

Bowman.—There was some severely cold weather during a part of the month. The holidays were delightfully pleasant. The oat crop is thought to be badly injured on thin lands.—B. O. Evans.

Blackville.—Oats were injured by the freeze on the 17th and 22d. The monthly mean temperature was  $0.1^{\circ}$  above the normal for December; the precipitation was 0.56 of an inch more than the normal.—G. D. C. Lange.

Walhalla.—The storm of 22-23d gave rain, sleet and snow. The rain froze as it fell, and thawed on the morning of the 24th. The precipitation for the month was 4.43 inches above the normal.—S. M. Pagan.

Santuc.—Late in the month the rainfall was very heavy, and streams overflowed their banks. Freezing weather injured much of the oat crops. On the night of the 17th-18th there was a light snowfall, enough to whiten the ground.—E. W. Jeter.

Lugoff.—This was the coldest December for years. Winter oats were badly hurt, and on creek and river lands probably killed by floods. The Wateree river, and adjacent creeks, were very high on the 31st; the rise began on the 28th.—W. J. Burdell, M. D.

Statesburg.—Severe and continued freezing weather, after the middle of the month, was very disastrous to the oat crop in this county. Most of the sowing in this vicinity was done after October, and all such late sowings have been entirely killed, or greatly damaged.—W. W. Anderson, M. D.

Summerville.—The mean relative humidity for the month was 73 per cent. Earthquake tremor on 1st at 7:35 p. m. Very high winds from southwest on night of 9th. The minimum from the 16th to 23d averaged  $22.4^{\circ}$ . The monthly mean temperature was  $1.3^{\circ}$  below normal.—Prof. Jno. Gadsden.

Beaufort.—The mean temperature for December was  $2.9^{\circ}$  below normal, and the precipitation 0.82 below. Accumulated deficiency in temperature since January 1, 1901, is  $633^{\circ}$ ;

accumulated deficiency in precipitation since July 1 is 15.29 inches, and since January 1st 9.53 inches.—S. M. Benton.

Gillisonville.—The month was very cold, and all truck was killed. The oat crop was badly damaged, if not lost entirely; there is a scarcity of seed oats for resowing the killed lands. The high price for seed will also tend to reduce the acreage, and gives a gloomy cast to the future.—Sam P. Saltus.

Liberty.—Wheat sowing was not completed as there were only three or four days in the month when the soil and weather conditions would permit of sowing. The ground was wet, and froze frequently. Late sowings are just beginning to come up. The early fall was too dry to sow small grain.—Jno. T. Boggs.

Society Hill.—Oats on sandy soils were seriously injured during the extremely cold weather, from 15th to 22d. The precipitation for the month was 2.34 inches above the normal; temperature  $2.7^{\circ}$  below normal. The minimum of  $14^{\circ}$  on the 21st is the lowest for December since 1894, when  $9^{\circ}$  occurred.—Maj. J. J. Lucas.

## NOTES AND COMMENTS

Attention is called to the new normals that have been calculated for every station that has a four year or longer record of temperature and precipitation. The normals for the summer months, that is to say, for May to September inclusive, are based on from 9 to 14 years records, while at many of the cotton region stations the observations were neglected during the rest of the year until 1896 and 1897; since then the record is without any material breaks. While many changes have been made in the new normals, nevertheless the monthly means and the annual mean temperature are approximately the same as heretofore. The annual mean precipitation is considerably less, and agrees more nearly with the stations that have the longest record.

As in 1899, so in 1900, Orangeburg county produced more bales of cotton than any other county in the State, with a total of 52,293, which is, however, nearly 10,000 bales less than were produced in the same county in the census year. Sumter county again stands second, Marlboro third and Anderson fourth, but all of them with reduced yields. Georgetown county had the smallest yield, but with an increase of 27 bales over 1899. The following counties produced more cotton in 1900 than in 1899, viz: Aiken, Beaufort, Charleston, Chester, Colleton, Dorchester, Edgefield, Fairfield, Georgetown, Horry, Lancaster, Lexington, Marion, Oconee and York. The total production for the State was, however, 56,330 bales less than in 1900. The total yields, as given in the Census Bulletins, were for 1899 837,112, and for 1900 were 780,782 bales.

## ERRATA.

November Report, on page 5, the depth of unmelted snow fall should be "T" at Batesburg, Conway, Lugoff and Seivern, instead of 5.4, 1.5, 2.4 and 2.8, respectively. On page 3, make maximum fall of snow for the month "5" at Batesburg, should be 4.0 at Calhoun Falls. Page 2 and 7, the headings of the charts should read November instead of December.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR JANUARY, 1902.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

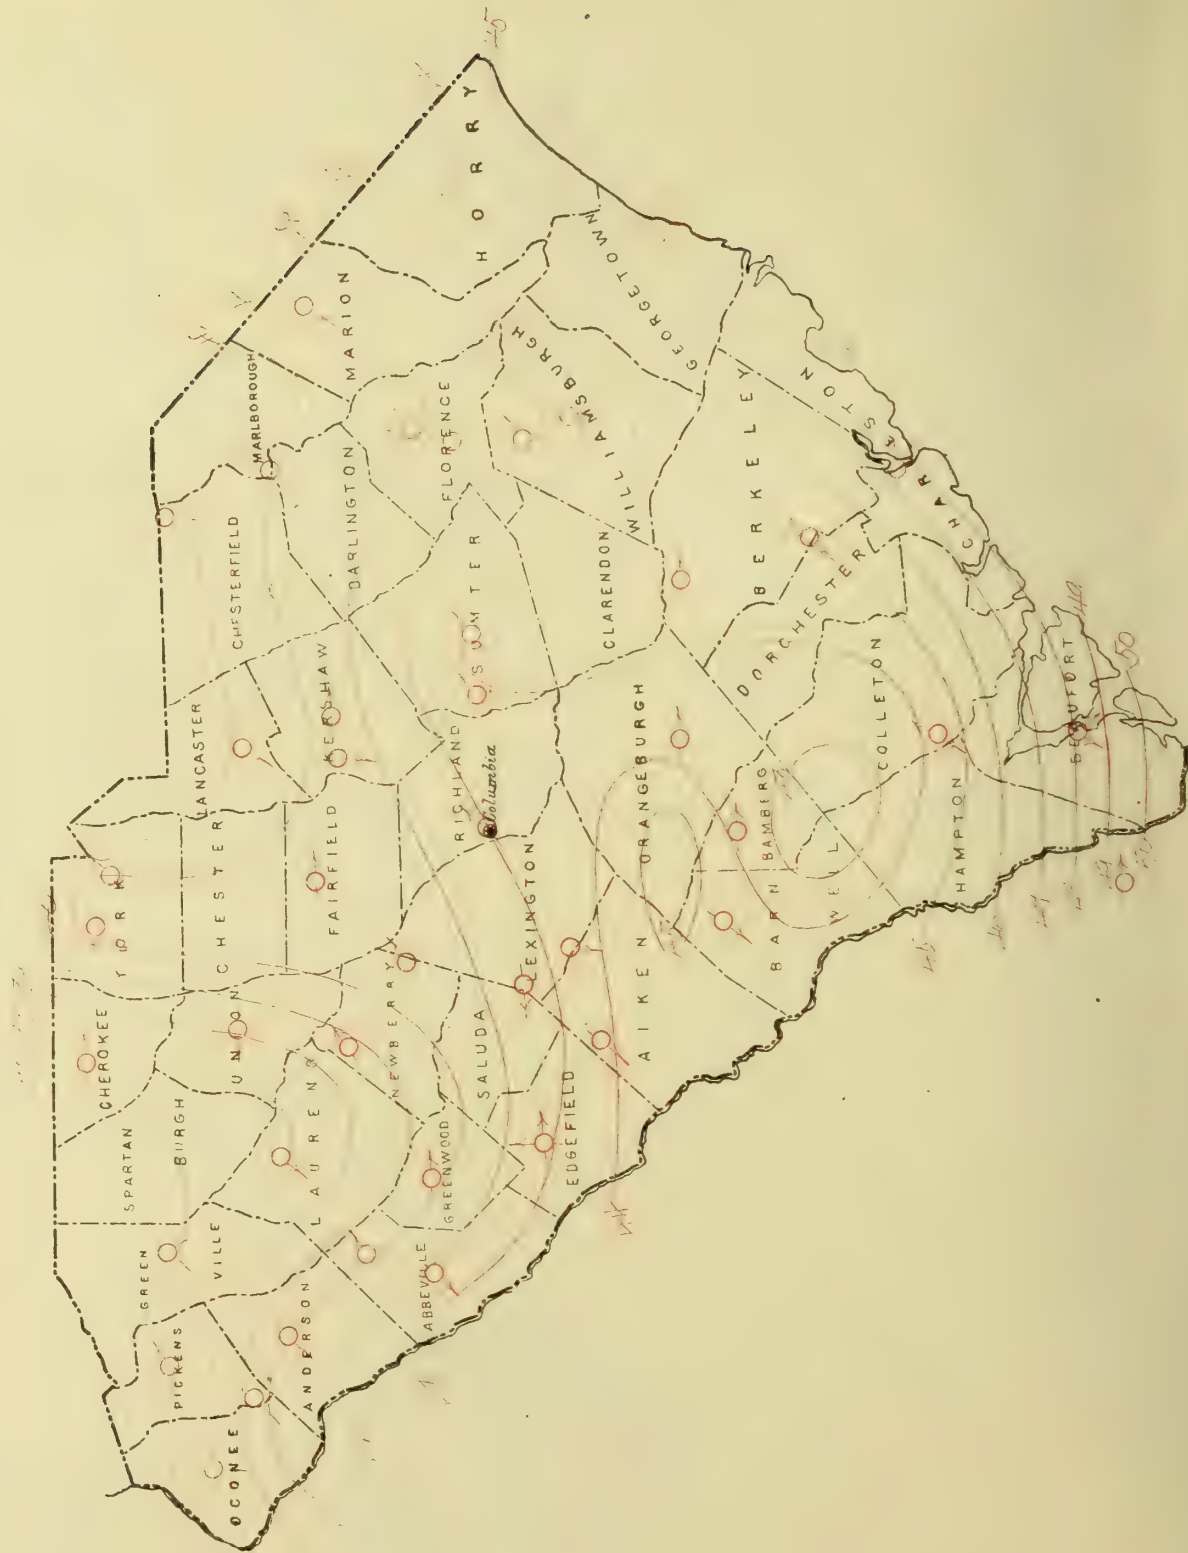

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JANUARY 1902.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. V. COLUMBIA, S. C., JANUARY, 1902. No. 1.

## CLIMATE AND CROPS.

The minimum temperature of  $11^{\circ}$  is not extremely low for January even in this State, and the maximum of  $80^{\circ}$  is seldom exceeded, nevertheless the average temperature was about as low as it has ever been recorded. This steady, low temperature was not conducive to growth, and, in the case of fruit-tree buds, was to that extent favorable, but in the case of newly sown wheat and oats, was unfavorable in preventing germination. Much of the land on which the oats crop was winter-killed during December was resown to oats, while lands that could not hitherto be sown to wheat were this month seeded, but as stated, little, if any came up during the month. It was also difficult to accurately estimate the extent of winter-killing as there was no sign of growth of any grain even where it is known that it was not winter-killed.

The precipitation was almost entirely in the form of rain and again exhibited a peculiarity of distribution by shading off regularly in amount from the northwestern towards the southeastern portions. The drought along the coast increased in severity to the detriment of early truck. The cool weather was also against the early development of truck. About the usual amount of early plowing was done, although in the western sections farm work made little progress, and there also the country roads were in bad condition especially towards the close of the month. Less than the usual amount of swelling of fruit buds was noted, and it is believed that fruit of all kinds escaped injury.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean for January, 1902, was  $42.4^{\circ}$  which is  $2.4^{\circ}$  below normal. The highest local mean was  $49.4^{\circ}$  at Beaufort, the lowest  $36.8^{\circ}$  at Greenville. The highest maximum temperature was  $80^{\circ}$  at Conway and Gillisonville on the 27th; the lowest minimum temperature was  $11^{\circ}$  at Temperance on the 4th, making the State range  $69^{\circ}$ . The greatest local monthly range was  $65^{\circ}$  at Temperance, the least  $38^{\circ}$  at Allendale and Heath Springs. The mean of the daily maximum temperatures was  $53.0^{\circ}$ , of the daily minimum temperatures  $31.8^{\circ}$ .

Ice.—Thin ice formed on a number of dates over the whole

State. Thin ice covered Kingston Lake, near Conway, on the mornings of the 6 7 8 9 15 19. The ground was frozen on many mornings, but thawed during the middle of the day, except on a few dates in the extreme western portions.

## Precipitation, in Inches.

The average for the month was 2.05 inches which is 1.43 below normal. The precipitation was heaviest in the northwestern portions where amounts between three and four inches were recorded. There were gradually lessening amounts towards the coast, and over a large area in the southeast portion, the precipitation averaged less than half an inch. The greatest local amount was 4.18 at Longshore, the least 0.36 at Blackville. The greatest 24-hourly fall was 1.90 at Georgetown on the 21st. The average number of days with rain was 5, ranging from 1 at Georgetown to 11 at Little Mountain.

Snow.—Only three stations reported any snow for January, as follows: Greenville "T" on the 21st; Liberty "T" on the 21st and 24th; Spartanburg "T" on the 21st.

Sleet.—Sleet was recorded as follows: Anderson, 29; Blackville, 18; Clemson College, 20; Due West, Greenville, Longshore, 21; Gaffney, 27, 28; Heath Springs, Winthrop College, 28; Liberty, 25, 29; Santuc, Yorkville, 28, 29; Spartanburg, 20, 28; Walhalla, 20, 21. The sleet storm of the night of the 28th and morning the 29th was especially destructive in Anderson, Spartanburg and Yorkville. Trees and wires were broken by the weight of the ice-covering they bore, that in instances was nearly half an inch thick.

Weather.—The average number of clear days was 15, partly cloudy 7, cloudy 9.

Winds.—The prevailing direction of the wind was from the southwest at 14 stations, from the west and northeast at 13 each, from the northwest at 8, from the north and south at 4 each, from the east at 3, and from the southeast at 1.

High Winds.—Beaufort, 21, 28; Bowman, 11, 12; Charleston, 21; Columbia, 4, 21, 22, 27; Gillisonville, 4, 11, 12, 21, 22; Heath Springs, 24; Longshore, Yorkville, 12; Walhalla, 3, 11, 12, 16, 21, 22.

## MISCELLANEOUS PHENOMENA (with dates).

Aurora.—Longshore, 31.

Earthquake.—Summerville, 22—10 to 11 a. m.

Thunderstorms.—Beaufort, 16; Bowman, 21; Little Mountain, 14, 20; Longshore, Santuc, 31.

Solar Halos.—Charleston, 4, 15, 18, 25, 31; Santuc, 2, 5; Statesburg, 2, 4; Walhalla, 2, 15.

Lunar Halos.—Charleston, 15, 18, 19, 25; Gillisonville, 18, 23; Greenville, Little Mountain, Lugoff, 15; Longshore, 23; Statesburg, 24.

Fogs, dense.—Aiken, 25, 28, 29, 30, 31; Blackville, 25, 28, 29, 30; Bowman, Smiths Mill, Sumter, 30, 31; Camden, Cheraw, Effingham, Kingstree, 19, 30; Charleston, 18, 30, 31; Clemson College, 18, 26, 28, 29; Columbia, 19, 29, 30, 31;

Conway, Edisto, Lugoff, St. George, St. Matthews, Yemassee, 30; Gillisonville, 3, 7, 29; Greenville, 26, 27; Heath Springs, 29; Liberty, 25, 26, 27, 30, 31; Little Mountain, 18, 25, 29, 30, 31; Longshore, 25, 30; St. Stephens, 19, 30, 31; Sumter, 19; Seivern, 23, 24, 25, 29, 30, 31; Statesburg, 19, 30, 31; Summerville, 15, 30; Trenton, 28, 29, 30, 31; Walhalla, 24; Yorkville, 25.

#### ERRATA.

December, 1901, report, pages 5 and 8: total precipitation at Greenville 8.89, should be 9.22; pages 5 and 8: total precipitation at Aiken 5.55, should be 5.75. Page 8th, Greenville, precipitation on the 9th 0.90, should be 0.31.

Annual Report, 1901, pages 5 and 9, total precipitation for the year at Greenville, 77.50, should be 77.83 inches and departure +23.96.

#### DELAYED DECEMBER REPORT.

Due West, mean temperature 42.6°, highest 67°, 14th; lowest 14°, 21st; total precipitation 6.94 inches; snowfall 2.3 inches; number of days with precipitation 10, clear 17, partly cloudy 6, cloudy 8; prevailing wind west.

#### REMARKS BY OBSERVERS.

Heath Springs.—Oats have been damaged by cold.—J. A. Weaner.

Summerville.—Twenty-six days were rainless. Average relative humidity 68 per cent. Winds and character of the day varying almost daily.—Prof. Jno. Gadsden.

Longshore.—First part of the month very dry, latter part wet; very little farm work has been done. Nearly all the oats were killed by the December freeze.—W. G. Peterson.

Batesburg.—There has been little or no farm work done, except hauling fertilizers. First of the month clear and dry, while the last week was damp, foggy and cloudy.—E. J. Hite.

Society Hill.—Oats that were killed by the December cold have been reseeded to a considerable extent. Mean temperature 2.2°, and rainfall 0.69 below normal.—Maj. J. J. Lucas.

Barksdale.—The first part of the month was generally clear, but the latter part was wet. Wheat and oats are very late, and have not their usual growth for the season.—E. E. Putnam.

Spartanburg.—On the night of the 20th there were rain, snow and sleet. On the 28th there were rain and sleet forming glare ice that broke all telegraph and telephone wires.—F. P. Robinson.

Walhalla.—Only a little plowing was practicable during the latter part of the month, it being too wet. Mean tempera-

ture 3.7°, and precipitation 0.49 of an inch below normal.—S. M. Pagan.

Blackville.—The weather was favorable for ploughing, and this work is about three-fourths finished. Monthly mean temperature 1.8°, and precipitation 3.14 inches below normal.—G. D. C. Lange.

Gillisonville.—The month was cold and dry. Frequent brisk, raw winds. Very little farm work has been done owing to a combination of adverse conditions. Laborers scarce and poor.—Sam P. Saltus.

Bowman.—Fall oats are badly damaged by cold. Considerable spring oats are now being sown. Gardens will be backward, although some gardening has been done. Field work well advanced.—B. O. Evans.

Lugoff.—Very little work has been done on the farms. Oats crop on highlands and in swamps badly damaged. Little or no replanting, possibly due to the high price of seed oats. The area sown to wheat is also small.—W. J. Burdell, M. D.

Santuc.—Some of the earliest sown oats escaped being winter-killed. Wheat in sprouting stages was hurt by the December cold weather, but a stand is now likely. The month ended wet, with five days of rain. Streams overflowed their banks.—E. W. Jeter.

Trenton.—Oats sown in November have been winter-killed. Some have resown oats, while others planted the lands to wheat. More oats will be sown in the spring. Mean temperature 4.8°, and precipitation 2.51 inches below normal.—C. A. Long.

Liberty.—The first of the month was clear and cold, but the ground could be plowed on portions of ten days. Wheat sowing was finished. Small grain sown before this month was badly winter-killed, especially fall oats. Plowing about half finished.—John T. Boggs.

Statesburg.—Cold waves followed each other in rapid succession, causing further damage to the oats crop, and retarded the progress of farm work, hence little has been done towards planting the next crops. No snow or sleet at this point, and the rains were light. The month ended wet.—W. W. Anderson, M. D.

Beaufort.—The mean temperature was 0.9 below normal; precipitation 1.98 inches below normal. Rain on the 21st did much good. Many fields of oats were killed by the December cold, and have been resown. Truck farmers are planting early peas about two weeks earlier than last year.—S. M. Benton.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR FEBRUARY, 1902.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

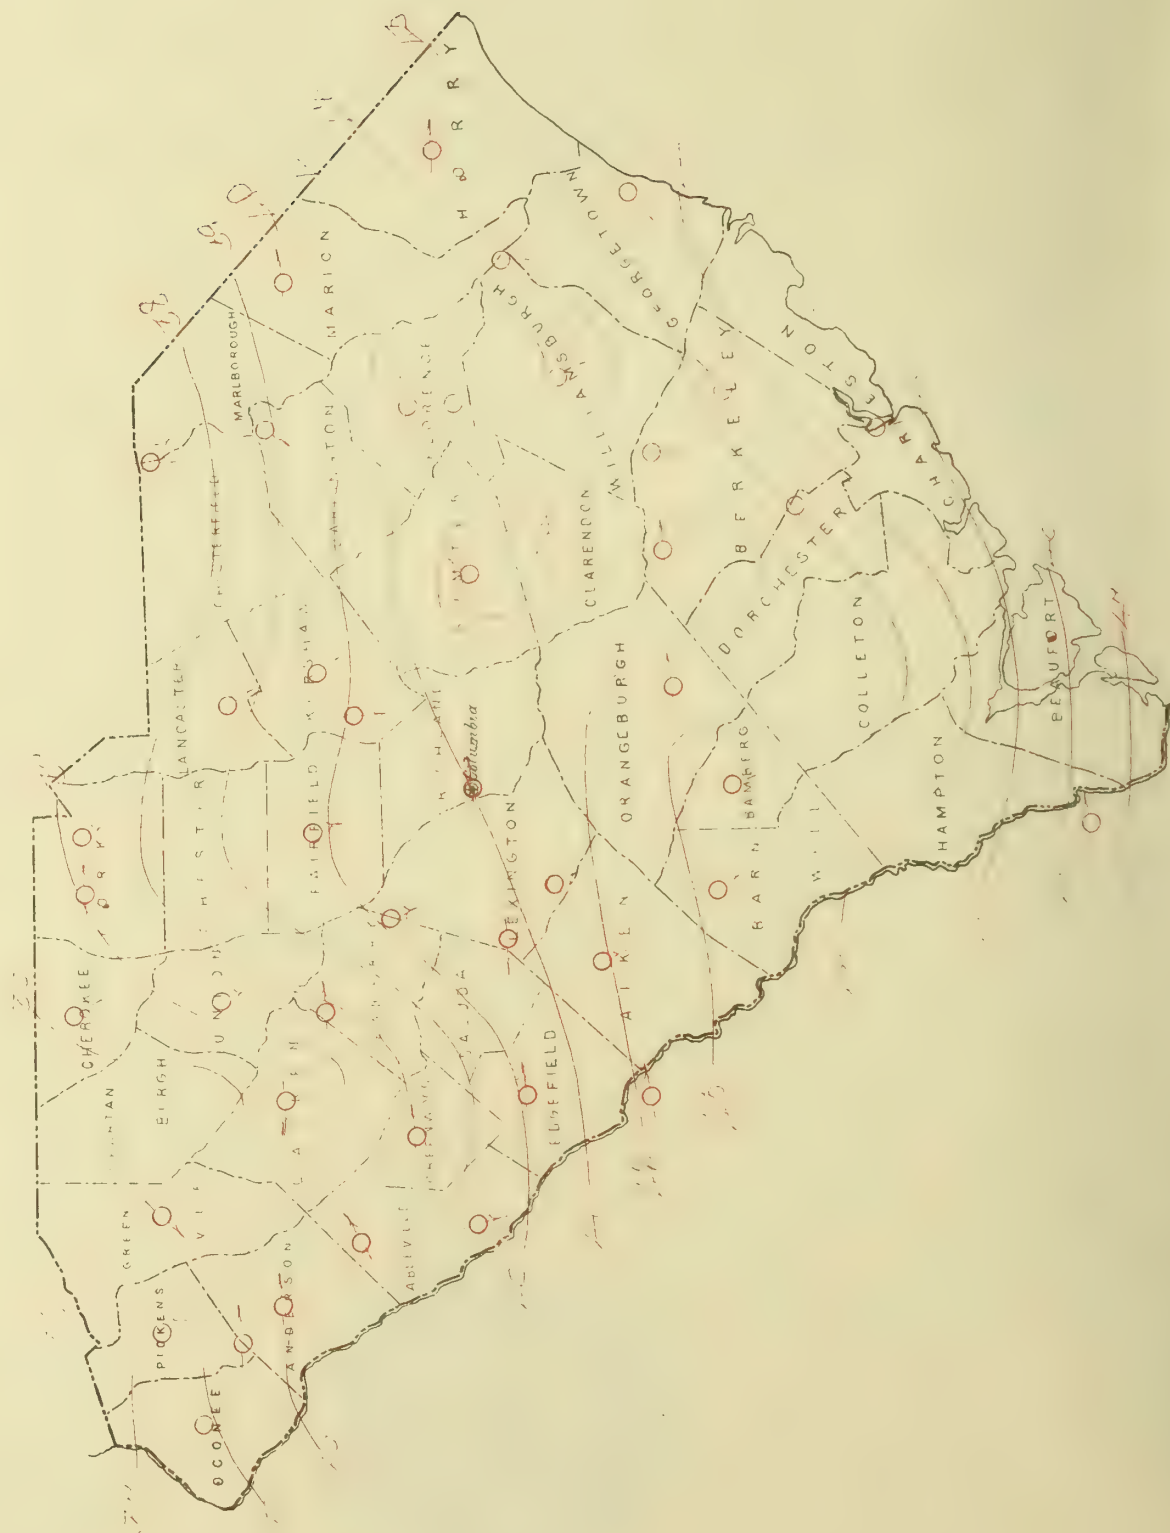

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR FEBRUARY, 1902.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. V. COLUMBIA, S. C., FEBRUARY, 1902. No. 2.

## CLIMATE AND CROPS.

Frequent frosts and prevailing low temperatures, with at times frozen and snow-covered ground, kept vegetation backward during the month so that no perceptible growth of grass or leaves was noted, an unusual condition.

Less than the usual amount of plowing was accomplished, this work having been impracticable, except on portions of about four days, over the western and northern sections of the State, largely owing to the unfitness of the ground which was kept too wet by frequent rains and snows. Over the southeastern portions, where less rain fell, about the usual amount of farm work incident to the season was done, and a start made at planting corn. Here, also, peach and plum trees began to blossom by the close of the month, while over the most of the State fruit buds showed but faint signs of swelling.

The cold weather was unfavorable for the germination of wheat and oats sown in January. Fall-sown oats were apparently further injured by winter-killing. Wheat maintained fairly good stands, during the month, but did not look vigorous at its close.

The drought along the southeastern coast was partially relieved and truck was greatly improved thereby, but it was kept backward by the prevailing low temperatures. The season as a whole is backward.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean for February, 1902, was  $40.6^{\circ}$ , which is  $5.4^{\circ}$  below normal. The highest local mean was  $46.4^{\circ}$  at Beaufort; the lowest  $35.4^{\circ}$  at Greenville. The highest maximum was  $77^{\circ}$  at Conway on the 22d and at St. George on the 27th; the lowest minimum was  $11^{\circ}$  at Barksdale on the 6th, making the State range  $66^{\circ}$ . The greatest local monthly range was  $57^{\circ}$  at Conway, the least  $38^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $50.1^{\circ}$ , of the daily minimums was  $31.1^{\circ}$ .

Ice.—The last freezing temperature, with ice, occurred on the southeastern coast on the 18th, and in the extreme northwestern portions on the 26th.

## Precipitation, in Inches.

The average precipitation was 5.89 inches, which is 1.20 above normal. The precipitation was quite evenly distributed, although slightly below normal along the southeastern coast. It consisted principally of rain, with, however, much snow and sleet over the western and northern portions. The heaviest rain occurred on the first two, and last two days. The greatest local amount was 10.51 at Barksdale, the least 2.38 at Yemassee. The greatest 24-hourly fall was 3.96 at Clemson College on the 27th. The average number of days with rain was 8, ranging from 3 at Georgetown to 12 at Conway.

Snow.—The northern half of the State had from 3 to 17 inches of snow, most of which fell on the 14-15-16th. This snow melted slowly, and some remained on the ground nearly a week. The southern limit of snowfall, of measurable amount, was about on a line running due east and west from central Edgefield to northern Horry counties, with limited areas south of this line that had small amounts. The greatest fall was 17 inches at Gaffney while all the northern border counties had from 10 to 15 inches. Trace of snow occurred as far eastward as Charleston on the 16th.

Sleet.—The following points reported sleet on the dates named: Aiken, Little Mountain, 15, 16; Anderson, Liberty, Longshore, Sumter, Spartanburg, Walhalla, 20; Barksdale, 18; Columbia, 15, 20; Darlington, Society Hill, 14; Due West, Effingham, Kingstree, Trenton, 15; Gaffney, 15, 18; Heath Springs, 20, 21; Lugoff, 16; Seivern, 14, 20, Sumter, 16, 17; Yorkville, 21, 22.

Hail.—Hail occurred as follows: Batesburg, Blackville, Due West, Greenville, Pinopolis, Summerville, Yorkville, 28; Charleston, 21; Darlington, Liberty, 27, 28; Santuc, 20, 27th.

Excessive precipitation.—Anderson, 27th, 3.70 in 24 hours; Barksdale, 27-28th, 3.24 in 24 hours; Calhoun Falls, 27-28th, 2.98 in 15 hours; Clemson College, 27-28th, 3.96 in 21 hours; Due West, 27-28th, 3.04 in 21 hours; Liberty, 27-28th, 3.10 in 14 hours; Spartanburg, 27-28th, 3.05 in 16 hours 30 minutes; Walhalla, 27-28th, 3.92 in 20 hours 30 minutes.

Weather.—The average number of clear days was 12, partly cloudy 6, cloudy 10.

Winds.—The prevailing direction of the wind was from the northwest at 21 stations, from the west at 15, from the north at 6, from the northeast at 4, from the southwest at 3, and from the east at 2.

High Winds.—Aiken, Summerville, 27, 28; Beaufort, 20; Blackville, 2, 28; Bowman, 2, 4, 17, 28; Charleston, 20, 28; Cheraw, Due West, Spartanburg, Sumter, 28; Columbia, 2, 4, 12, 17, 28; Heath Springs, 2, 5, 28; Liberty, Lugoff, 2, 4, 27, 28; Little Mountain, 27; Longshore, 2, 27, 28; Santuc, 2, 4, 28, Walhalla, 2, 20; Yorkville, 2, 5.

## MISCELLANEOUS PHENOMENA (with dates).

Lunar Corona.—Lugoff, 19, 23.

Earthquake.—Summerville, 4th at 11.25 p. m.

Solar Halos.—Charleston, 8, 10, 26, 27; Liberty, 24; Walhalla, 8.

Lunar Halos.—Charleston, 19, 23; Columbia, Little Mountain, 19; Santuc, 17; Walhalla, 13, 16.

Dense Fogs.—Aiken, Walhalla, 21; Charleston, 1, 21; Columbia, 1; Heath Springs, 24; Liberty, Longshore, Santuc, 22.

Thunderstorms.—Aiken, Pinopolis, Santuc, 24, 27, 28; Allendale, 24; Anderson, Little Mountain, Longshore, Society Hill, Spartanburg, Heath Springs, 27; Barksdale, 1, 28; Batesburg, Blackville, Cheraw, Due West, Sumter, Trial, Yorkville, 28; Beaufort, Gillisonville, 21, 24, 27, 28; Bowman, Lugoff, Winthrop College, 25, 28; Charleston, 15, 21, 24, 28; Clemson College, Darlington, Greenville, Seivern, Trenton, Walhalla, 27, 28; Liberty, 1, 27, 28; Summerville, 14, 21, 24, 28.

ERRATUM.—Monthly report for January, 1902, pages 5 and 8, total precipitation at Trial 1.40, should be 1.35.

#### REMARKS BY OBSERVERS.

Aiken.—This has been an extremely cold February.—C. F. McGahan, M. D.

Yorkville.—Abnormally cold month, and snowfall unusually heavy for February.—J. R. Schorb.

Barksdale.—The cold weather of this month did much damage to the oats crop; wheat is not so badly hurt.—E. E. Putnam.

Winthrop College.—Began snowing at 2.30 p. m. 14th, ended 9 a. m. 15th, with 12 inches. Two inches of snow on 16th.—Geo. B. Green.

Spartanburg.—From 2.30, 14th, to 7 a. m. 15th, 15 inches of snow fell that melted to 0.59 inch. Lightning, thunder, rain and strong winds on night of 27th.—F. P. Robinson.

Society Hill.—Oats are very slow in germinating owing to continued cold weather. The mean temperature was 5.6°, and precipitation 0.27 inch below normal.—Maj. J. J. Lucas.

Lugoff.—Sleet and snow on 15th measured one inch on a level, and melted down to 0.03 inch. Storm on 28th was severe, with high winds and thunder.—W. J. Burdell, M. D.

Blackville.—Weather favorable for seed germination; small grains improved. Monthly mean temperature 2.9° below normal; total precipitation 0.97 above normal.—G. D. C. Lange.

Bowman.—Another remarkably cold month. Little or nothing planted in gardens. Some spring oats are coming up. Farm work well advanced. Night of 27th quite stormy.—B. O. Evans.

Summerville.—Our wells at last supplied with water by rains of 24th and 27th. For two months previous, many have had to bring drinking water from Charleston.—Prof. Jno. Gadsden.

Greenville.—Fifteen inches of snow fell on the 14th. Thunder, lightning and rain on the 27th. Much electricity on the 28th, with light hail in the afternoon; thunder, rain and high temperature on 28th.—Mrs. S. A. Crittenden.

Batesburg.—Very little farm work has been done on account of cold and rainy weather. Almost continuous rains from 16th to close of month. Sleet on night of 15th, and snow on night of 16th, melted as they fell.—E. J. Hite.

Walhalla.—Storm of 20th gave snow and high winds during the a. m.; rain, sleet and mist in the p. m. The snowfall of the 14-15th was the heaviest on record at this place. Total precipitation 3.26 inches above normal.—S. M. Pagan.

Little Mountain.—No work was done in the fields during the month, the first half having been too cold and the latter half too wet. On most lands the oats crop is a total loss by freezing; wheat has a fair stand.—Jno. M. Sease, M. D.

Longshore.—February weather bad for farming interests. Fall sown oats were nearly all winter-killed; scarcely any spring oats have been sown. Wheat has poor stands. Little plowing was practicable. Farm laborers are scarce.—W. G. Peterson.

Santuc.—The precipitation for the month was heavy and of many varieties, including rain, snow, sleet and hail. There were a number of high winds, the storm of the 27-28th having been especially severe. On the 1-2d the rainfall was 3.69 inches in 36 hours, that washed lands badly.—E. W. Jeter.

Liberty.—Plowing was practicable on portions of only 4 days. Wheat sown in January is just coming up at the close of February. Very little oats sown as yet. Wheat sown before New Year is seriously winter-killed. Oats that were sown previous to January are about all killed.—Jno. T. Boggs.

Gillisonville.—The month was unpleasant. The first two decades were cold and dry, and unfavorable for germination of spring oats; the last decade was warm and wet; grain has started to grow; peach and plum trees were in bloom on 23d. Martins returned on the 28th. Spring plowing is well advanced.—Sam P. Saltus.

Trenton.—Mean temperature 6.5° below normal; precipitation 0.30 below. On account of frozen ground, rains and overflows, farmers are badly behind in plowing. Some spring oats being sown; those sown early in January have been killed; wheat sown in January has good stands, but early wheat was thinned by winter-killing.—C. A. Long.

CLIMATOLOGICAL DATA FOR THE MONTH OF FEBRUARY, 1902.

VOL. V.

COLUMBIA, S. C., MARCH, 1902.

No. 3.

## PROGRESS OF FARMWORK.

The weather conditions during March were variable, as is characteristic of the month, with alternating periods of moderately warm and decidedly cool spells. The rainfall was slightly excessive over the western portions and about normal over the central and eastern. The mean of the former and the average of the latter for the State was about normal. Freezing temperature prevailed throughout the State on the 19th, that did little damage to vegetation and to fruit buds owing to the backward condition of the season. Injury was confined principally to the coast truck regions. A heavy rainfall on the 15-16th relieved the long-existing drought in the southeastern counties.

The low temperatures of January and February place the season about ten days later than the average, and during March caused slow progress in farming operations especially in the western counties where not all lands have been prepared for corn and only a little was planted, but in the eastern portions the conditions were more favorable and upland corn planting is well underway, while some early planted is up.

Cotton planting was generally confined to the extreme southeastern portion, principally Beaufort county. However, the preparation of lands is well advanced and planting will be general by April 10th, except in the western portions where it will be delayed owing to the cold condition of the soil, unfavorable for germination.

Tobacco plants, in beds, are small for the season, but are plentiful and healthy.

Rice planting was delayed in the Georgetown districts by freshets, but good progress has been made in Colleton County where half of the early crop is planted, while in the other districts average progress was made.

Copious rainfall over the coast truck regions made the early vegetable crop quite promising, but the freeze on the 19th did considerable damage to strawberries in bloom, and all other tender vegetation. Truck seeding was about finished by the end of the month, while asparagus, cabbage and lettuce were being shipped.

Fully two-thirds of the fall-sown oats were winter-killed, but the portion of the crop that escaped looks well. The

scarcity and high price of seed oats prevented the usual amount of spring sowing, but the spring oats crop looks promising.

Wheat was but slightly injured by winter-killing, but the stands are as yet small and scattered, and did not grow or stool during March. Rye and barley are also small and late. Pasturage was backward.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean for March, 1902, was 54.0°, which is 0.5° below normal. The highest local mean was 58.9° at Georgetown, the lowest 47.6° at Greenville. The highest temperature was 86° at Gillisonville on the 30th; the lowest 19° at Barksdale, Greenville, Heath Springs and Walhalla on the 4-6-18-19th, respectively, making the State range 67°. The greatest local monthly range was 65° at Gillisonville; the least 47° at Allendale. The mean of the daily maximum temperatures was 65.1°; of the daily minimum temperatures 43.0°.

Frost.—Frosts were frequent during the first two decades. Killing frost with freezing temperatures, thin ice and a slight ground freeze occurred on the 19th, over the whole State. The temperature fell but little below the freezing point along the coast where vegetation was far enough advanced to have been damaged to any considerable extent. No frosts occurred after the 23d.

Precipitation, in Inches.

The average precipitation was 4.08 inches, which is 0.32 above normal. The rainfall was well distributed, and over small areas only was it excessive, and along the coast the excessive rainfall was very beneficial. The greatest local amount was 7.19 at Trenton; the least 1.90 at Darlington. The greatest 24-hourly fall was 2.50 at Georgetown on the 16th. The average number of days with rain was 10, ranging from 2 at Florence to 14 at Blackville.

Hail (places and dates).—Barksdale, Pinopolis, 1; Batesburg, Walhalla, 29; Temperance, 16; Winthrop College, 1, 29.

Weather.—The average number of clear days was 14, partly cloudy 7, and cloudy 10.

Winds.—The prevailing direction of the wind was from the southwest at 13 stations, west 12, northwest 9, south 6, southeast 5, east 3, and from the north and northeast at 2 each.

High Winds.—Beaufort, 28; Bowman, 5; Charleston, 29; Columbia, 2, 5, 13, 15, 17, 28, 29, 30, 31; Due West, 5, 16, 29, 30, 31; Gaffney, Society Hill, 30, 31; Gillisonville, 1, 5, 28, 29, 31; Heath Springs, 2, 5, 13, 30; Liberty, 2, 5, 17, 29, 30, 31; Little Mountain, 31; Longshore, 2, 5, 17, 28, 30, 31; Lugoff, 2, 5, 18, 19, 28, 30, 31; Summerville, 5, 28, 30; Trial, 18, 30, 31; Walhalla, 5, 16, 30, 31; Yorkville, 2, 5, 30, 31.

## ERRATA.

February, 1902, report: Total precipitation at Liberty, on pages 5 and 8, 6.34 should be 8.04; Liberty, page 5, total snowfall 14.0 should be 15.0.

## REMARKS BY OBSERVERS.

Batesburg.—Weather was unusually cool. Little or no planting was done, except gardens.—E. J. Hite.

Little Mountain.—Small grain made great improvement. Much of the corn land is ready to plant.—Jno. M. Sease, M. D.

Bowman.—Farm work well advanced, with some corn up, but gardens backward. Cold weather damaged fruit slightly.—B. O. Evans.

Barksdale.—Some corn and cane were planted. Preparation of lands made rapid progress during the last two weeks.—E. E. Putnam.

Lugoff.—The frost from 18th to 21st did not kill peaches. Much farm work has been done. A good deal of corn planted. Spring grain looks well.—W. J. Burdell, M. D.

Society Hill.—Fruit uninjured. Oats that survived the December cold look well. Late planted oats are small but promising. Wheat crop good.—Maj. J. J. Lucas.

Statesburg.—Early vegetation and some peach trees in full bloom were more or less seriously injured on the 19th. A heavy thunderstorm on the 29th.—W. W. Anderson, M. D.

Gillisonville.—Month cold and wet, with raw winds. Field work well advanced, and bulk of corn crop planted; germination very slow. Fruit seems to be uninjured.—Sam P. Saltus.

Liberty.—The ground was dry enough to work on very few days, and preparation of lands backward. Fruit not yet in full bloom. Grain crops small. Gardening just begun.—Jno. T. Boggs.

Allendale.—Favorable weather during the entire month for farming operations. Month closed with a cold wave, but with little resulting damage. Precipitation about normal.—R. D. Peebles.

Beaufort.—Temperature about normal; precipitation 1.25 inches in excess, but this was not too much rainfall for growing crops. Plowing and planting were somewhat delayed by rain.—S. M. Benton.

Santuc.—Much farm work was done, but wet soil interfered with plowing. Vegetation grew rapidly toward the close of the month. Fruit trees blooming freely. Small grain made good growth.—E. W. Jeter.

Trenton.—Heavy thunderstorm on the 29th, with excessive

rains, but doing only slight damage. Precipitation 3.95 inches above normal, and 2.14 more than the average for the first three months of the year.—C. A. Long.

Longshore.—Plowing began on the 10th. At 7 p. m. of 12th, a bright red spot appeared on the clouds about 20° above the NW. horizon. It would grow dim and then flash up brightly. Probably an aurora. Peach and plum trees began to bloom on 19th.—W. G. Peterson.

## MISCELLANEOUS PHENOMENA (with dates).

Aurora.—Longshore, 12.

Solar Corona.—Beaufort, 26.

Lunar Corona.—Lugoff, 23, 25.

Earthquake.—Summerville, 17th, 8.45 p. m.; 26th, 4.20 a. m.

Lunar Halo.—Charleston, Gillisonville, 23, 24; Little Mountain, 16; Statesville, 23.

Solar Halos.—Charleston, 14, 16, 20, 21, 23, 26; Sumter, 7; Statesburg, 21; Trial, 31.

Fogs, Dense.—Anderson, Statesburg, 9, 25; Beaufort, 10; Columbia, 9, 15, 25; Gillisonville, 7, 8, 10, 21, 22; Greenville, Liberty, 9, 25, 27, 29; Heath Springs, 15; Little Mountain, 25; Longshore, 8, 9, 25; Lugoff, 15, 16; Seivern, 8, 9, 10, 15, 24; Yorkville, 9.

Thunderstorms.—Aiken, Anderson, Batesburg, Due West, Gaffney, 29th; Barksdale, 1; Beaufort, 15, 16, 29; Blackville, 17, 29; Bowman, 15; Charleston, Winthrop College, 1, 16, 29; Cheraw, Columbia, Statesburg, Trial, 16, 29; Darlington, Little Mountain, 28; Gillisonville, 1, 16; Greenville, 12, 28; Liberty, 1, 16, 28, 29; Longshore, 12, 16, 28; Pinopolis, 1, 27, 28; Society Hill, 16, 28; Sumter, 16; Trenton, 12, 29; Lugoff, Yorkville, 1, 29; Walhalla, 1, 11, 15.

The following fruits were in full bloom on the dates given at Beaufort, peaches on the 8th, pear and plum trees on the 12th, figs began putting out on the 20th, blackberries bloomed on the 22d, dogwood on the 20th, and while the latter is not a fruit, yet when dogwood trees are in full bloom it is taken as an indication, by many farmers that the season has come to plant corn. At Gillisonville peach trees began blooming in February. At Columbia early peach trees were in full bloom on the 18th of March and pears by the 28th.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR APRIL, 1902.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

**CLIMATE AND CROP SERVICE**

OF THE

**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,

COLUMBIA, S. C.

VOL. V.

COLUMBIA, S. C., APRIL, 1902.

No. 4.

**CLIMATOLOGY FOR THE MONTH.****Temperature, in Degrees Fahrenheit.**

The monthly mean for April, 1902, was 60.4° which is 1.7° below normal. The highest local mean was 64.0° at Beaufort; the lowest 54.9° at Greenville. The highest temperature was 91° at Blackville on the 24th, 25th and 30th; the lowest 24° at Longshore on the 2d. The greatest local monthly range was 64° at Longshore, the least 42° at Charleston. The mean of the daily maximum temperatures was 72.0°, of the daily minimum temperatures 48.8°.

Frosts.—The dates of the last frosts only, are given in this statement, and for the points named that represent every portion of the State: On the 2d at Blackville and Darlington; 3d, at Camden, Cheraw, Conway, Edisto, Effingham, Gaffney, Gillisonville, Kingstree, St. George, St. Matthew, Santuc, St. Stephens, Seivern, and Smiths Mills; 8th, Summerville; 9th, at Charleston, Columbia, Greenville, Little Mountain, Lugoff, Statesburg, Sumter, Trial, Yemassee, and Yorkville; 10th, Clemson College; 12th, Longshore; 16th, Heath Springs. On the 2d a general heavy to killing frost, with thin ice in places, occurred, but vegetation was too backward to be hurt. The later frosts did no material injury.

**Precipitation, in Inches.**

The average precipitation was 2.18 inches which is 1.43 below normal. The greatest local monthly amount was 3.79 at Santuc, the least, 0.87 at Walhalla. The greatest 24-hourly fall was 2.06 at Santuc on the 19th. This amount fell in 2 hours and 5 minutes, and was the only excessive rainfall at any station. The average number of days with rain was 7, ranging from 3 at Barksdale, Walhalla and Winnsboro to 13 at Columbia.

Snow.—A flurry at Longshore on the 8th.

Sleet.—A slight fall at Cheraw on the 8th.

Hail.—Cheraw, Columbia, 8th; Gillisonville, 29th; Heath Springs, 4th; Longshore, Santuc, 19th.

Weather.—The average number of clear days was 15, partly cloudy 9, and cloudy 6.

Winds.—The prevailing direction of the wind was from the west at 13 stations, from the southwest at 11, from the south at 8, from the northwest at 6, from the northeast and southeast at 3 each, and from the north and east at 1 each.

High Winds.—Beaufort, 7th; Blackville, Charleston, 8th; Columbia, 1-6-7-8-9-23-25-26-29th; Due West, 1-2-8th; Gillisonville, 2-8th; Heath Springs, 8-29th; Liberty, 1-2-4-5-6-8-9-29th; Little Mountain, 29th; Longshore, 26th; Lugoff, 6-28th; Sumter, 26-27-28th; Trial, 8-9th; Walhalla, 1-2-8th.

**ERRATA.**

March, 1902, report, on page 6, the mean maximum temperature at Clemson College 60.1°, should be 61.0°; on page 5, monthly mean temperature at Clemson College, 49.2°, should be 49.6°.

**PROGRESS OF FARMWORK.**

April is, in South Carolina, more largely devoted to planting operations than any other month in the year, when the conditions are favorable, and during the current April the conditions could not well have been bettered for the preparation of lands and for planting.

Early in the month, the temperature was too low for rapid germination of seeds, but after the first decade higher and nearly normal temperatures prevailed and germination was more satisfactory.

There was a general deficiency in precipitation throughout the State, greatest in the extreme western and eastern portions, respectively, but in the west the ground held sufficient moisture and the absence of heavy rains was beneficial rather than harmful; while in the east the deficiency in rainfall intensified a drought that has existed continuously since July, 1901, and which, since then, has not been greatly ameliorated at any point, and at no place entirely relieved. Nevertheless, the showers that fell moistened the surface soil sufficiently to bring up corn, cotton, rice and tobacco to very satisfactory stands.

Almost the whole of the corn, cotton, rice, and melon crops, as well as gardens and crops of little or no commercial value, were planted, a work that usually extends well into May. Cultivation of corn and transplanting of tobacco were also begun.

The heavy to killing frost on the 2d injured peaches to some extent, but subsequently it was noted that enough sound fruit was left on the trees to make a full crop. Pear and apple trees had not budded enough to have been at all injured. The frosts after that on the 2d, were light as a rule, and did no harm. Hail storms occurred on the 19th and 25th, but actual damage was confined to very small areas. Truck was retarded in growth by the cool weather early in the month, and the lack of moisture, but later developed rapidly and the season's shipments of vegetables were but slightly later than usual.

**MISCELLANEOUS PHENOMENA (with dates).**

Zodiacal Lights.—Very distinct at Statesburg 8-9th.

Lunar Halos.—Charleston, 20, 21, 22, 23; Santuc, 20.

Solar Halos.—Charleston, 21, 23, 24, 26, 27, 29; Gillisonville, 30; Santuc, 20; Statesburg, 6, 7, 13.

Dense Fogs.—Blackville, 19; Bowman, 27, 30; Charleston, Gillisonville, Lugoff, 17, Little Mountain, Longshore, Statesburg, 25; Santuc, 18.

Thunderstorms.—Aiken, 7, 17, 30; Allendale, Society Hill, 29; Anderson, Batesburg, Clemson College, Greenville, 19; Beaufort, 7, 17, 29, 30; Blackville, 7, 17, 19, 30; Bowman, 8, 17, 19; Charleston, 7, 17, 24, 25, 29, 30; Cheraw, 4, 8, 17, 29; Columbia, 7, 19, 25, 26, 29, 30; Darlington, Summerville, Trial, 7, 29; Due West, Saluda, 30; Effingham, Pinopolis, 7; Gillisonville, 7, 16, 29, 30; Heath Springs, 4; Liberty, 17, 19; Little Mountain, 17, 19, 30; Longshore, 7, 16, 19, 28, 29; Lugoff, 4, 5, 7, 8, 20, 25, 29, 30; Santuc, 17, 28; Seivern, 29, 30; Statesburg, 7, 17, 25, 29, 30; Trenton, 7, 29, 30; Walhalla, 16, 30; Winthrop College, 19, 23; Yorkville, 17, 23.

**REMARKS BY OBSERVERS.**

Longshore.—Trace of snow on the 8th. First whippoorwill heard on the 11th.—W. G. Peterson.

Blackville.—Monthly mean temperature was  $1.7^{\circ}$  above normal; precipitation 0.59 below.—G. D. C. Lange.

Bowman.—The latter part of the month was favorable for farm work. Small grains began to head.—B. O. Evans.

Anderson.—Cotton planting was about finished by the close of the month. Stands of corn were good.—R. B. Dean.

Barksdale.—The dry weather of the month was favorable for the preparation of lands and planting operations.—E. E. Putnam.

Batesburg.—Rainfall deficient. Corn looked well at close of the month. Cotton came up to good stands. All fruits were promising.—E. J. Hite.

Heath Springs.—Some small grain looks promising. Much early corn replanted. Corn and cotton not all planted. Fruit crop fine.—J. A. Weaner.

Gillisonville.—Month cold and unfavorable for germina-

tion. Corn all planted. Cotton nearly so; the latter looks sickly. Oats look promising.—Sam P. Saltus.

Trenton.—Precipitation 1.55 inches below normal, and 0.41 less than normal for the first 4 months of the year. Light ground freeze and ice on the 9th.—C. A. Long.

Society Hill.—All crops greatly benefited by the rain on 29th. Fruit safe from frost. Mean temperature  $1.6^{\circ}$ , and precipitation 1.21 inches below normal.—Maj. J. J. Lucas.

Allendale.—Severe hail storm on 29th, did serious damage to crops in some sections. The month lacked rainfall for crops, but corn and cotton came up to good stands.—R. D. Peeples.

Liberty.—Month favorable for farm work, except too dry to bring up shallow-planted seeds of all kinds. Planting nearly finished, with only fair stands of early plantings. Peach crop safe.—Jno. T. Boggs.

Santuc.—Killing frost and thin ice on 2d. Hail on 19th damaged fruit and small grain. On the same date precipitation was heavy and washed lands badly. Small grain failing. Planting in progress.—E. W. Jeter.

Lugoff.—There was an unusual amount of thunder and lightning during the month, and it was unusually warm. Stands of corn poor. Oats did fairly well. Cotton about all planted, coming up in places.—W. J. Burdell, M. D.

Beaufort.—Rainfall was light, and the winds were drying, and the sun hot. The rainfall on 30th did much good. Much of the cotton was not up at close of month. Mean temperature was  $1.6^{\circ}$ , and rainfall 0.32 inches below normal.—S. M. Benton.

Statesburg.—The frosts on the 2d and 9th were partially killing on low grounds. The rains at the close of the month having been accompanied by a rise in temperature, were very beneficial to cotton, causing it to germinate rapidly and vigorously.—W. W. Anderson, M. D.

**MIGRATORY BIRDS.**

The first appearance of migratory birds, and a common insect, were noted at a few stations as follows: Longshore, whippoorwill heard first on 11th. Lugoff, whippoorwill heard first on 1st; saw first bee-martin on 11th. Society Hill, first humming bird was seen on 18th; first whippoorwill on 19th; first night-hawk on 30th. Statesburg, first large brown fly-catcher heard on 15th; first fire-fly was seen on 22d; first rain-crow heard on 25th.

CLIMATOLOGICAL DATA FOR THE MONTH OF APRIL, 1902.

STATIONS.	Counties.	Elevation—feet.	Length of record—years.	Temperature—in degrees Fahrenheit.						Precipitation—in inches.				Sky.				Prevailing direction of wind.	Observers.	
				Mean.	Departure from the normal.	Highest.	Date.	Lowest.	Date.	Greatest daily range.	Total.	Departure from the normal.	Greatest in 24 hours.	Total snowfall, (unmelted.)	Number rainy days.	Number clear days.	Number partly cloudy days.			Number cloudy days.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR MAY, 1902.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

COLUMBIA, S. C.

VOL. V.

COLUMBIA, S. C., MAY, 1902.

No. 5.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The monthly mean for May, 1902, was  $74.0^{\circ}$ , which is  $2.4^{\circ}$  above normal. The highest local mean was  $77.4^{\circ}$  at Blackville, the lowest  $71.7^{\circ}$  at Kingstree. The highest temperature was  $101^{\circ}$  at Blackville on the 4th, the lowest  $42^{\circ}$  at Heath Springs on the 29th, and at Liberty on the 28th, making the State range  $59^{\circ}$ . The greatest monthly local range was  $56^{\circ}$  at Seivern, the least  $35^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $85.5^{\circ}$ , of the daily minimum temperatures  $62.4^{\circ}$ .

Frosts.—Liberty 28th. Light frosts were reported on the 28th, by climate and crop correspondents, in the extreme northwestern portions of the State.

## Precipitation, in Inches.

The average precipitation was 2.69 inches, which is 0.67 below normal. The greatest local amount was 6.53 at Temperance, the least 0.29 at Liberty. The greatest 24-hourly fall, 2.02 at St. Stephens on the 25th. There was no excessive rainfall at any station. There was an average of 8 days with rain, ranging from 2 at Batesburg to 13 at Columbia and Smiths Mills.

Hail.—Hail was noted at the following voluntary observing stations: Beaufort, 1-3d; Blackville, Pinopolis, 14th; Bowman, Darlington, 25; Gillisonville, Santuc, 3d; Trial, 4th. The hailstorms of the 3d and 25th occurred at many points in the central and eastern counties, having been reported by climate and crop correspondents, and in places destroyed field crops, necessitating replanting.

Weather.—The average number of clear days was 15, of partly cloudy 10, and of cloudy 6.

Winds.—The prevailing direction of the wind was from the southwest at 17 stations, from the south at 12, from the west at 8, from the southeast at 6, from the northeast at 3, and from the east at 2.

High Winds.—High winds were noted as follows: Blackville, Longshore 1st; Charleston 15th; Columbia 1-25th;

Darlington, Florence, Lugoff and Santuc 25th; Liberty 7-10-11-25-27; Saluda 2-3rd.

## MISCELLANEOUS PHENOMENA (with dates).

Parhelion.—Santuc, 9.

Lunar Coronæ.—Lugoff, 20; Santuc, 16, 17.

Lunar Halos.—Blackville, 15; Gillisonville, 16, 17, 19.

Solar Halos.—Charleston, 9, 22, 29, 31; Gillisonville, 14, 15; Santuc, 31; Statesburg, 30.

Earthquakes.—Columbia, 24, 1:15 a. m.; and 9:02 a. m.; Summerville, 15, 10:30 p. m.; 24, 9:05 a. m.

Dense Fog.—Blackville, 7, 10, 11, 17; Bowman, Charleston, 5, 6; Clemson College, 16; Gillisonville, 6; Heath Springs, 9, 11; Little Mountain, 9; Longshore, 5, 9; Lugoff, 9, 10; St. Stephens, 11, 18; Seivern, 16, 26; Statesburg, Yorkville, 5; Trenton, 4.

Thunderstorms.—Aiken, 4, 8, 9, 10, 18; Beaufort, 1, 3, 4, 8, 9, 14, 15, 17, 18, 19, 25, 26; Blackville, 1, 10, 17, 19, 31; Bowman, 14, 25; Charleston, 2, 4, 8, 14, 15, 17, 18, 19, 20, 25, 27; Cheraw, (2) 1, 11, 13, 14, 25, 31; Clemson College, 8; Columbia, 1, 3, 7, 9, 12, 13, 14, 25, 31; Darlington, 7, 11, 25, 26; Gillisonville, 1, 3, 5, 8, 9, 10, 14, 15, 18, 19, 21, 25, 30, 31; Heath Springs, 14; Liberty, 1, 2, 3, 7, 8, 11, 14, 19, 25; Little Mountain, 3, 7, 11, 13, 14, 15, 16, 19, 21, 31; Longshore, 1, 2, 7, 13, 14, 31; Lugoff, 1, 2, 8, 11, 13, 14, 15, 25, 31; Pinopolis, 25; Santuc, 1, 2, 3, 7, 11, 12, 13, 14, 19, 25; Seivern, 9, 10, 11, 14, 31; Statesburg, 1, 14, 17, 18, 19, 25, 31; Sumter, 10, 12, 15, 26, 31; Trenton, 3, 4, 7, 8, 18, 21, 31; Trial, 4, 10, 14; Winthrop, College, 1, 3, 14, 18, 25; Yorkville, 7, 13, 14, 25.

## PROGRESS OF FARMWORK.

The mean temperature was slightly above normal, with a hot spell during the first week in May, followed by steady high temperatures until near the close of the month, when unseasonably cool weather prevailed for a few days, causing light frosts on the 28th in the extreme western portion.

The warm weather was conducive to rapid growth, while the cool period did no lasting damage to crops, although it checked them temporarily, and was detrimental to that extent, and also increased the destructive activity of cutworms on corn, and favored the appearance of lice on cotton.

Precipitation was deficient over the western half of the State, and along the immediate coast, although generally there was enough moisture in the soil for quick germination of seeds, and to maintain a sturdy, vigorous growth, and healthy color of crops. Locally, destructive hailstorms occurred on the 3rd and 25th, and destructive winds on the 25th.

The condition of the staple crops of corn, cotton, rice and tobacco, was very good, owing to favorable weather, but in places it was too dry for maturing wheat and oats. Harvesting of the latter grain made fair progress.

Stands of corn and tobacco were damaged by insects,

necessitating considerable replanting of the former. Bottom land corn planting made slow progress, owing to the dry and hard condition of those lands, especially over the western counties. Stands of cotton were almost perfect, with the plants healthy and vigorous, and there was need for very little replanting, except where first plantings were destroyed by hail. Early in the month sea-island cotton did not do well, but improved materially towards its close.

Field crops were generally well cultivated, with a few exceptions, where heavy rains interfered, and were free from grass and weeds. Truck continued to mature, and heavy shipments of white potatoes, beans and cucumbers were made.

Peaches, pears and apples dropped extensively, impairing the previous favorable prospects for a large fruit crop. The general crop prospects were very bright at the end of May.

BAROMETER TABLE.

Stations.	Mean.	Highest.	Lowest.
Augusta .....	30.04	30.26	29.97
Charleston .....	30.05	30.29	29.75
Charlotte .....	30.05	30.32	29.82
Columbia .....	30.06	30.32	29.80

## REMARKS BY OBSERVERS.

Blackville.—Mean temperature of 4° below normal; precipitation 2.70 below normal.—G. D. C. Lange.

Allendale.—Rainfall deficient. Corn and cotton looked well at the close of the month. Fruits were promising.—R. D. Peebles.

Little Mountain.—At the end of the month all crops were in fine condition, well worked and free from grass.—John M. Sease, M. D.

Barksdale.—The month was dry. Cotton and corn look well. Wheat and oats are poor. The rainfall was light, but very beneficial.—E. E. Putnam.

Bowman.—The hailstorm on the 25th was very destructive to crops, in sections, in this vicinity. The accompanying electric display was terrific.—B. O. Evans.

Trenton.—Precipitation 1.29 inches less than the average for May, and 1.70 inches less than the average for the first five months of the year.—C. A. Long.

Summerville.—Mean relative humidity 76 per cent. Excess of rainfall for the month 0.03 inches; deficiency since January 1st, 21.74 inches.—Prof. John Gadsden.

Lugoff.—Crops look exceedingly well for the season, but the cool weather at the end of the month damaged cotton. Worms did some damage to corn.—W. J. Burdell, M. D.

Society Hill.—Cotton, corn and tobacco are more promising than last year; wheat and oats less so. Temperature 1.3°, and rainfall 0.80 above normal.—Maj. J. J. Lucas.

Anderson.—Crops in good condition. Cotton did not grow well during the last week, owing to the cool nights. Oats and wheat harvest were begun. Rain is needed.—R. B. Dean.

Batesburg.—Gardens a failure on account of drought throughout the month. Corn and cotton did well, except the nights were too cool, near the close of the month, for cotton.—E. J. Hite.

Beaufort.—One inch and sixty-three hundredths of rain fell on the 19th in less than 2 hours. Hail on the 1st and 3rd did considerable damage, over limited areas, in portions of the county.—S. M. Benton.

Liberty.—Weather dry. Gardens impaired. Wheat and oats suffering. Nearly all fruits dropped. Cotton looks well, and shows squares. Crops clean and well cultivated.—John T. Boggs.

Longshore.—On the 2nd, just at dark, during a thunderstorm, there was a hot wind that felt as if coming from a furnace. A dry month. Crops clean, and in fair condition.—W. G. Peterson.

Darlington.—On the 25th, there was a violent wind and hail in Darlington and vicinity. The hail was most severe from two to three miles north and west of Darlington. Some damage was done to crops, particularly to tobacco and cotton.—E. R. McIver.

Gillisonville.—Month wet and cold, with frequent showers and brisk winds. Corn, cotton and minor crops started well, and maintained a healthy growth. Farmwork well advanced. Acres of cotton and corn ruined by wireworms.—Sam P. Saltus.

Statesburg.—The month's weather conditions were favorable to the cultivation and growth of cotton and corn, and these crops now present a very promising appearance; better than has been the case for many years. Fall sown oats are good where there was sufficient rainfall. Gardens and pastures are poor.—W. W. Anderson, M. D.

Santuc.—A severe storm on the 25th, six miles wide, moving from the northwest towards the southeast, did great damage, several houses being destroyed, many partially. Crops were damaged and lands washed. Three persons were killed, and seven injured. The rainfall measured 1.13 inches, but owing to the high wind, it is not believed this measurement is correct. The temperature dropped 28° during the storm.—E. W. Jeter.

Through the kindness and courtesy of Hon. B. R. Tillman and the Chief of the Weather Bureau, this office has been enabled to supply the Year Book for 1901 to every voluntary observer and climate and crop correspondent in the South Carolina Section.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR JUNE, 1902.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

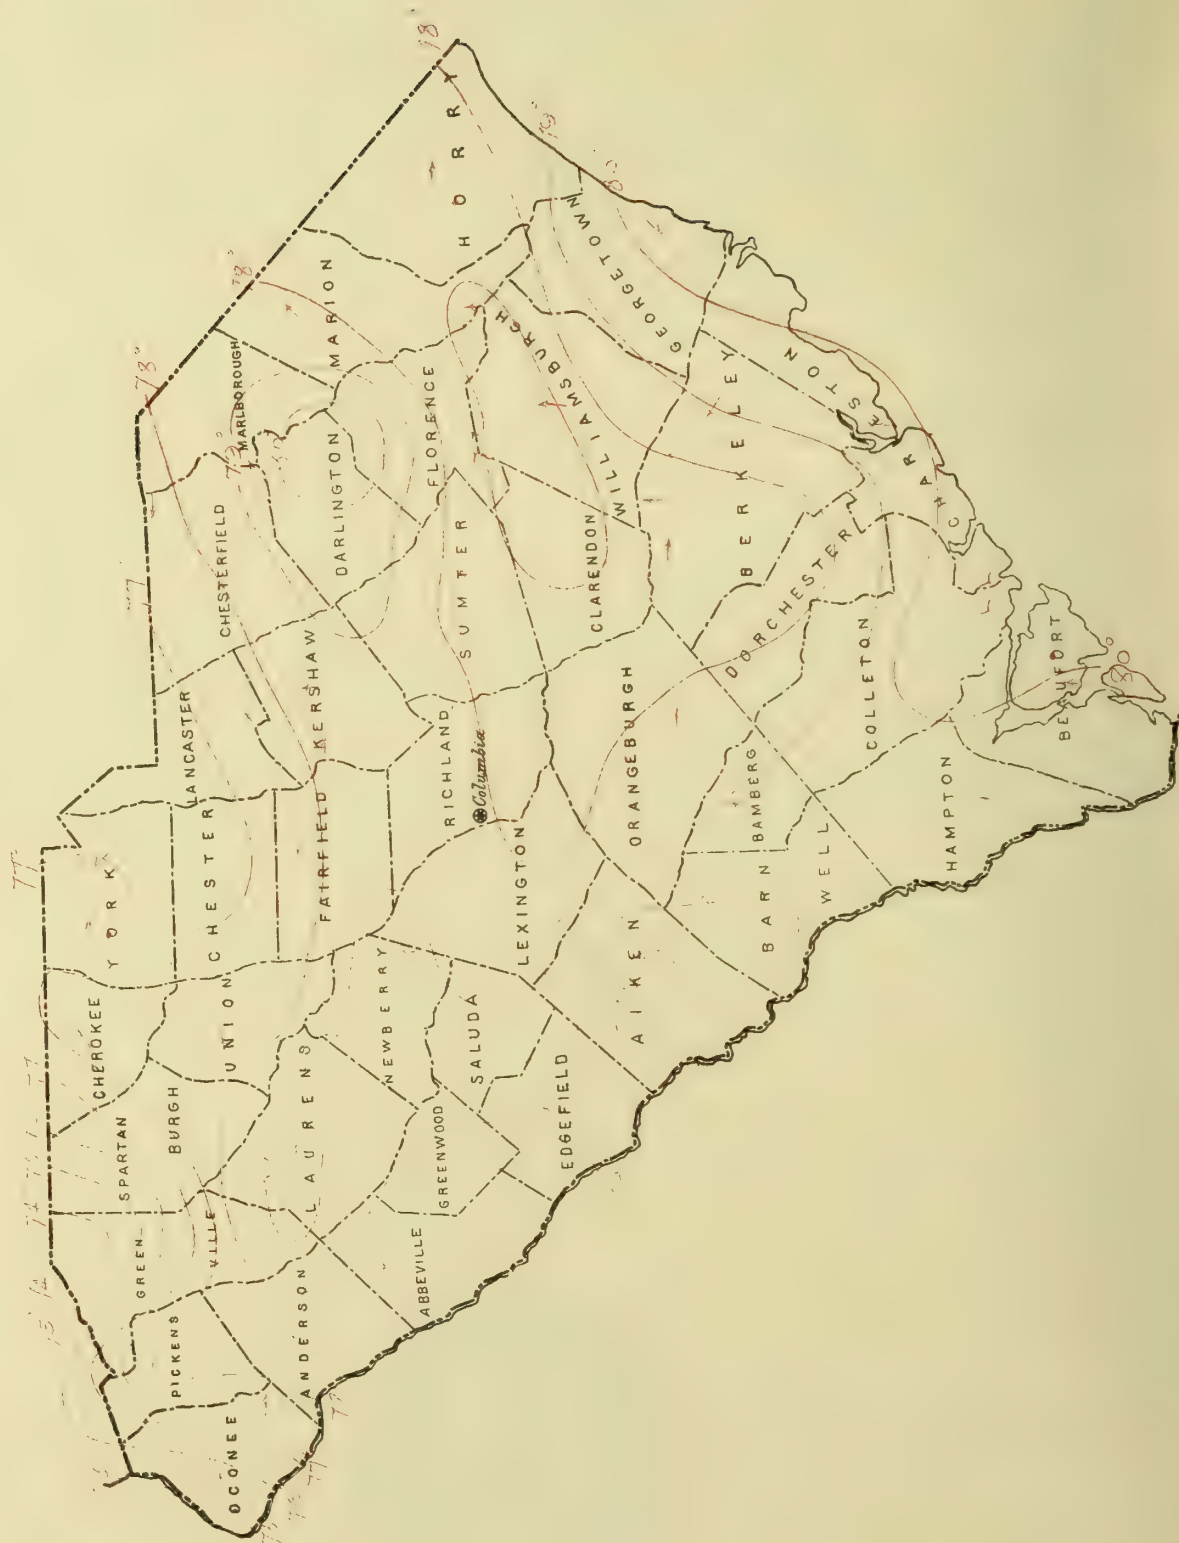

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JUNE, 1902.  
(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. V. COLUMBIA, S. C., JUNE, 1902.

No. 6.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The monthly mean for June, 1902, was 78.5°, which is 0.6° above normal. The highest local mean was 81.3°, at Aiken, the lowest 74° at Greenville. The highest maximum was 105°, at Liberty on the 12th, the lowest minimum 52° at Santuc on the 10th, making the State range 53°. The greatest local range was 49° at Gaffney and Liberty, the least 32°, at Charleston and Saint Matthews. The mean of the daily maximum temperatures was 89.6°, of the daily minimum temperatures, 67.4°.

Precipitation, in Inches.

The precipitation averaged 4.48 inches, which is 0.38 below normal. The greatest local amount was 8.11, at Trenton, the least 1.39, at Cheraw (1). The greatest 24-hourly fall was 4.40 at Gaffney on the 15-16th. There was an average of 9 rainy days, ranging from 4 at Anderson and Calhoun Falls to 14 at Charleston.

Hail.—Hail was reported at the following stations: Blackville, 8th; Bowman, Darlington, 21st; Conway, Gillisonville, Lugoff, 4th; Longshore, 26th; Statesburg, 4-8th.

Excessive precipitation.—Allendale 14-15th, 3.30 in 17 hours; Barksdale 14-15th, 3.10 in 24 hours; Blackville 15-16th, 3.90 in 14:30 hours; Gaffney 15-16th, 4.40 in 24 hours; Greenville 16th, 2.22 in 1 hour; Heath Springs 15th, 2.00 in 1 hour; Lugoff 7th, 1.16 in 1 hour; Spartanburg 15th, 3.40 in about 18 hours; Trenton 15th, 2.72 in 24 hours; Winnsboro 15th, 2.60 in 24 hours.

Weather.—The average number of clear days was 15, of partly cloudy 10, and of cloudy 5.

Winds.—The prevailing direction of the wind was from the southwest at 19 stations, from the south at 10, from the west at 9, from the southeast at 6, from the northeast at 3, and from the east at 1.

High winds.—Anderson, 8-25th; Barksdale, Blackville, Due West, Longshore, Lugoff, Society Hill, Spartanburg,

26th; Beaufort, 15th (50 miles per hour); Charleston, Columbia, Statesburg, 8-26th; Cheraw, Temperance, 26-27th; Gaffney, 7-8-26th; Gillisonville, 4th; Greenville, 18-20-26th; Heath Springs, 7-8-16-26-29th; Liberty, 18-26-27th; Saluda, 4-27th; Santuc, 26-29th; Sumter, 16-26th; Trenton, 16th; Trial, 15-26th.

BAROMETER TABLE.

Stations.	Mean.	Highest.	Lowest.
Augusta .....	29.96	30.35	29.44
Charleston .....	29.97	30.35	29.66
Charlotte .....	29.96	30.39	29.44
Columbia .....	29.96	30.39	29.59
Savannah .....	29.97	30.31	29.63
Wilmington .....	29.98	30.39	29.62

## PROGRESS OF FARMWORK.

There was absence of regularity in the temperature distribution during June, but generally the northeastern and the Savannah Valley counties were the warmest, in which regions it was above normal, while at a few points the temperature was slightly below normal. The temperatures were conducive to rapid and vigorous growth of crops until near the close of the month, when it became excessively hot.

The rainfall distribution was likewise uneven, and seemingly erratic, with marked deficiencies along the coast and over the northeastern and extreme western counties. A few of the south-central counties had excessive and slightly harmful amounts, but the State average was about normal.

These conditions were, in the main, favorable for crop development, while there was, as well, ample opportunity between rains to cultivate and clean the fields. Field crops were in fine condition at the beginning of the month, and, under the favorable weather that prevailed, maintained this condition to its close, so that the prospects for corn, cotton, rice, and many of the numerous minor crops were exceedingly bright. Cotton began to bloom during the second decade. Early corn was layed by, while stubble and bottom lands were planted to corn. Tobacco was not uniform in its condition, but on the whole became a fine crop; cutting and curing began about the middle of the month, but made slow progress. The weather was favorable for harvesting and threshing wheat and oats, but some oats were slightly damaged in the shock by rain. Peaches ripened, a moderately sized crop of slightly inferior quality, but there was much loss from rapid decay. Truck shipments ended during the month, except for watermelons, that began to ripen during the latter part. Fruits, other than peaches, were not materially influenced in their development by the weather variations. The rice crop developed into a very promising one, with no adverse weather to retard its growth. The month was, on the whole, favorable to agricultural interests.

## REMARKS BY OBSERVERS.

Spartanburg.—Tornadic winds on the 26th.—F. P. Robinson.

Trenton.—Severe wind, rain, and electric storm on the 16th.—C. A. Long.

Yorkville.—Much windy weather on the last few days of the month.—J. R. Schorb.

Cheraw (1).—There was a severe electrical storm with high winds on night of 26-27th.—W. R. Godfrey.

Anderson.—At the close of month crops were suffering for rain. The latter portion of the month was unusually windy.—R. B. Dean.

Blackville.—Mean temperature  $0.3^{\circ}$  below normal; precipitation 1.66 above. Prevailing winds from the southwest.—G. D. C. Lang.

Gaffney.—Severe wind storms on the 7th and 8th, and on the 26th there was a terrific wind storm, blowing with almost tornadic force.—B. F. Camp.

Barksdale.—The rainfall of the latter half of the month started crops to growing vigorously. High winds on the 26th damaged corn by splitting its blades.—E. E. Putnam.

Greenville.—Heavy thunderstorm on the 12th. High winds on the 18th, 20th, and 21st, did no damage. Severe thunderstorm on the 26th.—Mrs. S. A. Crittenden.

Liberty.—Crops grew nicely and much corn was layed by. Threshing was finished, and the yields of wheat were poor. Cotton looks better than for many years.—John T. Boggs.

Longshore.—There was a heavy wind and thunderstorm on the 26th. The month was generally favorable on crops, although there were some cool nights.—W. G. Peterson.

Santuc.—High winds all day on the 26th did much damage to crops. Parching winds have prevailed since that date that were injurious to all crops.—E. W. Jeter.

Batesburg.—There were beneficial rains after the middle of the month, and at its close all crops looked promising. There was a sand storm on the 5th, that did no damage.—E. J. Hite.

Lugoff.—Crops look well, although in need of rain at close of month. The storm on the 27th did considerable damage, and the accompanying rain damaged oats in the shock.—W. J. Burdell, M. D.

Society Hill.—High winds on the 26th. First covey of young quail noted on the same date. Crops are unusually fine. Temperature  $1.8^{\circ}$  above, and rainfall 3.30 below normal.—Maj. J. J. Lucas.

Allendale.—All crops very promising at close of month. Fine crop of watermelons being shipped. Peach crop short.

Excessive rain on 15th damaged lowlands somewhat.—R. D. Peeples.

Bowman.—Temperature increased rapidly after the middle of the month. All crops comparatively clean and well worked. Cotton growing unusually fast. Corn needed rain to fill out well.—B. O. Evans.

Gillisonville.—Month showery, closing with hot spell. Weather very favorable on crops, that made fair growth, which was checked during the latter portion, when corn was badly namaged. Fields were layed by in good condition.—Sam. P. Saltus.

Beaufort.—Mean temperature  $0.5^{\circ}$ , and precipitation 2.92 inches below normal. The last week was entirely without rain, and generally without dew. During this time the temperature was in the nineties every day, with a dry, hot wind blowing briskly. Much corn was ruined, and all crops suffered impairment.—S. M. Benton.

Statesburg.—Destructive hail on the 4th; on the 8th some hail with high winds that did little damage. Weather conditions were favorable for the rapid and vigorous growth of all crops, all of which looked more promising than for many years up to the 26th, after which the high temperature and brisk, drying winds caused a rapid deterioration.—W. W. Anderson, M. D.

## MISCELLANEOUS PHENOMENA (with dates).

Earthquake, light.—Longshore 10.

Lunar Halos.—Beaufort, Santuc, Seivern, Statesburg, Trial, 13; Bowman, 13, 26; Charleston, 13, 21, 22.

Solar Halos.—Charleston, 13, 24, 26; Gillisonville, 24; Liberty, 28, 29, 30; Santuc, 3, 14; Statesburg, 3.

Dense fogs.—Beaufort, Little Mountain, Statesburg, 18; Bowman, St. Stephens, 6; Seivern, 7, 9, 14.

Thunderstorms.—Aiken, 1, 3, 7; Barksdale, 21, 26; Beaufort 4, 8, 14, 16, 17, 18, 20, 21, 22, 24; Blackville, 4, 7, 8, 15, 19, 21, 26; Bowman, 19, 21; Charleston, 4, 8, 9, 16, 17, 18, 19, 20, 21, 26, 27; Cheraw, 7, 8, 18, 20, 21, 25, 26; Clemson College, 15, 20; Conway, 8, 26; Columbia, 4, 7, 8, 15, 16, 19, 26; Darlington, 7, 15, 21, 26; Due West, 26; Gaffney, 7, 8, 15, 16, 26; Georgetown, 4, 8; Gillisonville, 4, 7, 8, 16, 17, 18, 20, 21, 22, 24; Greenville, 12, 20, 21, 26; Liberty, 5, 6, 7, 8, 12, 13, 15, 16, 18, 19, 20, 21; Little Mountain, 4, 7, 8, 14, 15, 26; Longshore, 4, 7, 14, 15, 16, 18, 19, 26; Lugoff, 7, 8, 18, 27; Pinopolis, 7, 8, 26; Saluda, 27; Santuc, 7, 8, 15, 21, 24, 27; Society Hill, 8, 18, 26; Statesburg, 4, 6, 7, 8, 16, 18, 19, 20, 21, 26; Spartanburg, 12; Summerville, 2; Sumter, 4, 8, 9, 21, 27; Trenton, 6, 7, 8, 16, 17, 18, 19, 21; Trial, 4, 7, 8, 18, 20, 21, 26; Winthrop College, 7, 8, 15, 26; Yorkville, 8, 27, 30.

## PROF. JOHN GADSDEN DEAD.

Prof. John Gadsden died at his home in Summerville on June 11 at an advanced age. He was prominently connected with the educational history of Charleston during his whole life. He was for fifteen years superintendent of the Holy Communion Church Institute, now Porter Military Academy, and at the time of his death held the professorship of English at the College of Charleston. Since May, 1898, Professor Gadsden served as a voluntary observer at Summerville, and his reports were models of accuracy and excellence. He was a lover and close observer of nature in all its forms and manifestations, and a thorough student of meteorology.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR AUGUST, 1902.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR AUGUST, 1902.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

Vol. V. COLUMBIA, S. C., AUGUST, 1902. No. 8.

## PROGRESS OF FARMWORK.

Early in the month there was a period of excessive heat, lasting about a week, and again from the 18th to the 22nd abnormally high temperatures prevailed, but these hot spells were not materially harmful on growing crops on account of frequent local rains that kept the soil well supplied with moisture. There were localities that had no rain, or insufficient amounts, and there, no doubt, the high temperatures were damaging.

The rainfall for the month was generally below normal, although throughout the central counties a number of localities had amounts slightly in excess of their normals, while in the eastern and western divisions the deficiencies ranged from one to six inches. This does not indicate, however, that the month was an unusually dry one, or droughty, for such was not the case. Over probably two-thirds of the State the precipitation varied from 4 to 8 inches, and only in Spartanburg county was it generally below 2 inches. The normal August precipitation is over six inches. In most localities where drought existed at the close of July, copious rainfall relieved it during the first half of August.

There were hail-storms and violent winds, accompanying thunderstorms, on the 6th, 14th, 15th, 16th and 21st, but the damage to crops was confined to very limited areas, although causing almost total destruction in places.

Despite the apparently favorable weather that prevailed, cotton steadily deteriorated, due mostly to rust that caused shedding of leaves, squares and young bolls, but this deterioration, it is believed, should properly be called a failure to recover from the injury received in July and should not be ascribed to unfavorable conditions in August. Cotton came to maturity very early and bolls began to open freely during the first week, and by the end of the month half the bolls on early cotton were open, and picking had made rapid progress. Late cotton, and especially that planted on clayey soils continued to fruit throughout the month. Rains along the coast were of great benefit to sea-island cotton.

Early corn ripened, and some was gathered, while late corn improved materially and became very promising. The

last of a very fine tobacco crop was cut and cured. Rice ripened in good condition, and harvest was begun. All the numerous minor crops responded to the favorable weather and grew well. Army worms infested the eastern counties early in the month, and traveled westward through the central counties, destroying all grass fields in their pathway. Late peaches and apples were poor, but pears and grapes were fairly plentiful. In the trucking districts the soil was in fine tilth for fall planting.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The monthly mean for August, 1902, was 78.6° which is 0.7° below normal. The highest local mean was 80.6° at Beaufort, the lowest was 74.2° at Greenville. The highest maximum was 104° at Heath Springs on the 22nd, the lowest minimum was 55° at Heath Springs on the 29th making the State range 49°, which is also the greatest local range. The least local range was 30° at Charleston. The mean of the daily maximum temperatures was 88.8°, and of the daily minimum temperatures was 68.3°.

## Precipitation, in Inches.

The precipitation averaged 5.07 inches, which is 1.11 below normal. The greatest local amount was 8.68 at Batesburg, the least was 1.20 at Spartanburg. The greatest 24-hourly fall was 3.60 at Winthrop College on the 14th. There was an average of 12 days with rain, ranging from 4 at Georgetown to 17 at Lugoff.

Hail.—Hail was reported by voluntary observers as follows: Anderson, 22nd; Cheraw, 10th; Columbia, 15th; Greenville, 6th, 21st; Liberty, 14th, 21st, 22nd; Lugoff, 6th; Summerville, 20th.

Excessive Precipitation.—Batesburg, 1st, 1.03 in one hour, 17th; 1.90 in 30 minutes; 24th, 1.30 in 1 hour; Beaufort, 10th, 2.00 in 1:50 hrs; Columbia, 14th-15th, 2.76 in 17 hrs; Heath Springs, 14th, 2.60 in 4 hrs; Statesburg, 10th, 1.30 in 1:30 hrs; Winthrop College, 14th, 3.60 in 14 hrs.

Weather.—The average number of clear days was 12, of partly cloudy 10, and of cloudy 7.

Winds.—The prevailing direction of the wind was from the southwest at 20 stations, from the west at 12, the northeast and south at 6 each, the east and northwest at 3 each, the southwest at 2, and the north at 1.

High Winds.—Barksdale, 22nd; Bennettsville, Greenville, 21st; Blackville, 10th; Charleston, 20th; Columbia, 15th; Gillisonville, 11th; Liberty, 12th; Longshore, 14th; Lugoff, Santuc, 6th; Saluda, 11th, 16th; Trial, 16th.

## MISCELLANEOUS PHENOMENA (with dates).

Lunar Corona.—Lugoff, 17th.

Lunar Halo.—Charleston, 14th, 15th, 19th, 20th.

Parhelion.—Santuc, 13th.

Solar Halos—Charleston, 1st, 15th, 21st, 30th; Statesburg, 30.

Polar Bands (Aurora?).—Statesburg, 18th.

Meteors.—Bowman (very bright) 7th, 9:30 p. m.

Dense Fogs.—Anderson, 4th; Bowman, 30-31st; Cheraw, 8th; Heath Springs, 8th, 9th, 15th; Liberty, 4th, 5th, 24th; Longshore 10th; Lugoff, 8th, 24th, 25th; St. Stephens, 1st, 31st; Seivern, 9th, 13th; Smith's Mills, 18th; Society Hall, 7th; Statesburg, 8th, 10th, 13th, 15th.

Thunderstorms.—Aiken, 6, 12, 17; Allendale, 1, 2, 3, 8, 10, 14, 15, 19, 29; Anderson, 22; Barksdale, 14, 22; Beaufort, 1, 2, 3, 7, 8, 9, 10, 11, 13, 15, 19, 22, 23; Blackville, 1, 9, 10, 12, 13, 14, 15, 16, 19, 21, 22; Bowman, 1, 4, 6, 14, 15, 16; Charleston, 1, 2, 3, 5, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 20, 21, 22, 23; Cheraw, 1, 4, 5, 6, 9, 10, 11, 14, 17, 19, 21, 23; Columbia, 1, 4, 5, 6, 9, 10, 11, 14, 15, 16, 17, 21, 23; Darlington, 4, 6, 11, 23; Due West, 15; Gaffney 14; Gillisonville, 1, 2, 3, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 19, 22, 23; Heath Springs, 14, 15; Liberty, 4, 5, 6, 11, 13, 14, 15, 16, 21, 22, 23; Little Mountain, 1, 6, 9, 14, 15, 16, 21; Longshore, 1, 9, 11, 13, 14, 15, 16, 22, 23; Lugoff, 5, 6, 11, 12, 14, 16, 21; St. Matthews, 15, 16; Saluda, 11, 13, 16, 22; Santuc, 1, 4, 6, 9, 14, 15, 16, 21, 22; Seivern, 11, 15th; Society Hall, 4, 5, 6, 21; Statesburg, 1, 2, 4, 5, 6, 10, 11, 14, 15, 16, 21, 23; Summerville, 1, 4, 6, 10, 14, 15, 16, 20, 21, 22, 23; Trenton, 2, 4, 9, 10, 11, 13, 14, 16, 19, 21; Trial, 1, 5, 10, 14, 16, 20, 21; Winthrop College, 1, 4, 5, 10, 13, 14, 21, 23; Yorkville, 14, 24.

#### REMARKS BY OBSERVERS.

Allendale.—Fairly good weather prevailed during the entire month; the first part having been unusually hot and humid, the latter part cooler and more favorable for harvesting crops, which are fairly good.—R. D. Peeples.

Barksdale.—The first 20 days were harmful to cotton, which shed its entire August crop. Corn is better than was expected.—E. E. Putnam.

Batesburg.—The rains of the month were fine for late crops. The yield of early crops is much less than was expected. Cotton was damaged by the rainfall.—E. J. Hite.

Bennettsville.—Cotton opened to the top. Corn was hurt by drought. Minor crops doing well.—John L. McCall.

Blackville.—Monthly mean temperature  $0.3^{\circ}$  below, and precipitation 0.87 below normal.—G. D. C. Lange.

Bowman.—Fodder was gathered in fine condition, as most of the rains occurred at night. Cotton being gathered rapidly, as the weather was favorable for picking. Early corn was harvested.—B. O. Evans.

Gillisonville.—Month hot with low relative humidity. Many thunderstorms during the nights, but the showers were

scattered. Cotton opened prematurely and many plants died. Minor crops did well.—Sam. P. Saltus.

Greenville.—Light fall of hail on 6th with unusually large stones. A severe wind and hail storm on the 21st, with much loud thunder and vivid lightning.—Mrs. S. A. Crittenden.

Heath Springs.—The corn crop is good. Some cotton was picked, but the crop is short. Minor crops good.—J. A. Weaner.

Liberty.—There were several severe hail storms in this vicinity, that covered about ten miles square, that damaged crops seriously. High winds also damaged crops to some extent.—Jno. T. Boggs.

Longshore.—A severe wind storm on the 14th, west of this station, with grand electric display on the 14-15th.—W. G. Peterson.

Lugoff.—The thunderstorm of the 15th was the most severe in years. Cotton opened rapidly. Weather favorable for farmwork.—W. J. Burdell, M. D.

St. Matthews.—Severe thunderstorm from 11:30 p. m., 16th, to 1 a. m., 17th, during which the railroad depot was struck by lightning and destroyed.—J. S. Wannamaker.

Santuc.—Numerous light rains occurred, but until near the end of the month there was none that was greatly beneficial. High winds dried the lands. On the night of the 15th, the most vivid lightning and heavy thunder occurred, frightening people.—E. W. Jeter.

Society Hill.—The most beautiful electric display on the 6th, I ever beheld. Great deterioration of cotton and corn crops from excessive heat in July and first ten days of August. Cotton maturing early.—J. J. Lucas.

Statesburg.—Plentiful rains have fallen during this month and were very beneficial to all growing crops. On sandy lands much cotton was badly injured by drought and burning suns of July, and has not recovered. On well-fertilized clay soils the plants made new growth this month, and promise a good top crop.—W. W. Anderson, M. D.

Summerville.—Hail storm on the 20th lasted 10 minutes. Hail the size of a medium marble. The sun shone during the whole storm.—Miss L. R. Gadsden.

Trenton.—Cotton nearly all open at the close of the month. Most of it remains in the fields as pickers are scarce.—C. A. Long.

Yorkville.—Much thunder in the vicinity, but very little at this point.—J. R. Schorb.

REPORT FOR SEPTEMBER, 1902.

---

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

---

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

---

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

SHOULDER NEAR TAPPAN AND TREVILLE, WASH CO., MICHIGAN - 1902

U. S. DEPARTMENT OF AGRICULTURE.

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. V. COLUMBIA, S. C., SEPTEMBER, 1902. No. 9.

PROGRESS OF FARMWORK.

With the exception of a few hot days at the beginning of the month, the temperatures ranged slightly below normal until near its close when they were slightly above, with a humid warmth that stimulated growth of vegetation. The weather was at no time sufficiently cold to injure field crops, and was on the whole quite favorable for their development, which made rapid progress.

The rainfall was in places copious, and generally beneficial, although there were regions where the ground was too dry during the greater portion of the month for fall plowing, and for growing crops. The eastern half of the State had the least precipitation, although precipitation was quite unevenly distributed, and adjacent localities differed to a marked degree in their respective amounts. Where showers were most frequent, they interfered somewhat with haying and cotton picking, but no material damage resulted. On the whole, the weather was fairly good, in places excellent, for harvesting operations.

The late corn crop ripened under favorable conditions, and, with no check to its development, it became a very promising one. This is true of both bottom land and stubble corn. Early corn was gathered and used for feeding purposes.

Cotton stopped rusting and shedding during the first decade, and on heavy, well fertilized soils a top crop grew rankly, bloomed profusely and fruited heavily, while on light soils of low or moderate fertility, the stalks died. The new fruitage is of little commercial account, unless there is an absence of killing frost until a much later date than that of the average one for first killing frost in the Autumn. Matured bolls opened rapidly on both early and late cotton, and picking made equally rapid progress, except that in numerous localities pickers were scarce, and there picking did not keep pace with the opening. By the close of the month, a larger portion of the crop had been gathered than is usual in September, amounting in some instances to the total crop, and in others varying from half to three-fourths of it. Sea-island cotton improved, and developed into the finest crop in years.

Peas were cut for hay, but the yields were not as heavy as

expected. The rice harvest was scarcely interrupted, and its condition promised a yield above the average of recent years. Minor crops of all kinds made marked improvement, especially sweet potatoes and cane, the latter yielding syrup of superior excellence. Some progress was made in seeding oats. Army worms were about the only destructive insects that merit notice, and they were confined to paths of more or less width, over which they travelled westward destroying all grass fields that they crossed.

BAROMETER TABLE.

Stations.	Mean.	Highest.	Lowest.
Augusta .....	30.02	30.19	29.71
Charleston .....	30.03	30.19	29.74
Charlotte .....	30.06	30.29	29.65
Columbia .....	30.03	30.24	29.71
Savannah .....	30.01	30.14	29.76
Wilmington .....	30.02	30.20	29.68

FROST.

The near approach of the season for cold weather merits the caution to Voluntary Observers that frost data are of the utmost importance in climatology, and that the character of the frost, whether light, heavy or killing, should be carefully differentiated in recording it, as explained on page 24, paragraph 56, of Instructions for Voluntary Observers.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean for September, 1902, was 72.1° which is 2.2° below normal. The highest local mean was 76.2° at Beaufort, the lowest was 66.5° at Greenville. The highest maximum was 98° at Aiken on the 1st, and at Beaufort on the 2nd; the lowest minimum was 34° at Clemson College and Walhalla on the 13th, at Santuc on the 15th, at Heath Springs on the 16th making the State range 55°. The greatest local monthly range was 51° at Seivern, the least 27° at Charleston. The mean of the daily maximum temperatures was 82.1°, of the daily minimum was 62.1.

Precipitation, in Inches.

The precipitation averaged 3.74 inches, which is 0.11 below normal. The greatest local amount was 7.97 at Beaufort, the least was 1.10 at Bowman. The greatest 24-hourly fall was 4.10 at Conway on the 8th. There average number of days with rain 8 ranging from 3 at Aiken and Cheraw to 12 at Charleston and Summerville.

Excessive Precipitation.—Blackville, 9th, 3.29 in 17 hrs. 21 mins.; Calhoun Falls, 8th-9th, 2.56 in 24 hrs.; Conway, 8th, 4.10 in 14 hrs. 30 mins.; Liberty, 8th-9th, 3.41 in 23 hrs.; St. Stephens, 3.02 in 24 hrs.; Smiths Mills, 3.20 in 24 hrs.; Spartanburg, 9th, 2.73 in 16 hrs. 30 mins.; Walhalla, 7th-8th,

2.60 in 22 hrs.

Weather.—The average number of clear days was 13, of partly cloudy 9, and of cloudy, 8.

Winds.—The prevailing direction of the wind was from the northeast at 23 stations, the east at 8, the southeast at 5, the southwest at 4, the south, west and north at 3 each, and the northwest at 1.

High Winds.—Beaufort, 30th; Charleston, 5th; Columbia, 9, 27, 28, 30th; Saluda, 29th.

#### MISCELLANEOUS PHENOMENA (with dates).

LUNAR HALOS.—Charleston, 19, 21; Gillisonville, 13, 17, 19.

SOLAR HALOS.—Charleston, 2, 8, 18, 21, 30; Santuc, 17; Stateburg, 13.

Fogs.—Blackville, 1, 3; Bowman, 1, 2, 3, 4, 5, 6, 7, 8; Cheraw, 2, 7; Charleston, 23, 24; Clemson College, 26; Columbia, 1, 8; Heath Springs, Little Mountain, 8; Liberty, 13, 27; Lugoff, 8, 13, 23, 24; St. Stephens, 1, 2, 4, 21, 24; Saluda, 8, 20; Seivern, 1, 3, 9, 23, 24; Society Hill, 2, 4, 8; Stateburg, Yemassee, 1; Summerville, 21, 24, 29.

THUNDERSTORMS.—Aiken, 17; Beaufort, 4, 7, 8, 9, 12, 24, 25, 27, 30; Blackville, 4, 8, 24, 28; Cheraw, 25; Charleston, 4, 7, 8, 9, 25, 27, 28, 30; Clemson College, 24; Columbia, 8, 27; Gillisonville, 7, 8, 24, 26, 27; Liberty, 3, 8, 24, 26, 27, 30; Little Mountain, 6, 27; Longshore, 8, 9, 24, 27, 30; Lugoff, 28; Saluda, 27; Santuc, 8, 9, 30; Society Hill, 30; Stateburg, 4, 8, 9, 25, 26, 27, 30; Summerville, 7, 8, 9, 25, 27; Trenton, 24, 27, 30; Trial, 8, 25, 30; Winthrop College, 4, 8, 26; Yorkville, 4, 5, 30.

#### REMARKS BY OBSERVERS.

Allendale.—About  $\frac{3}{4}$  of the cotton crop has been picked and marketed. The corn crop practically a failure.—R. D. Peeples.

Anderson.—The last week was the only one not good for picking cotton and saving hay, having been damp and rainy.—R. B. Dean.

Batesburg.—The weather was very favorable for gathering pea-vine hay, late fodder and corn. Peas, potatoes, turnips and gardens grew nicely.—E. J. Hite.

Beaufort.—Mean temperature  $1^{\circ}$  below normal; precipitation 2.63 above. From the 4th to the 9th, six consecutive days, 7.77 inches of rain fell, doing much damage to young turnips and other fall crops. Cotton promises a fine crop.—S. M. Benton.

Bennettsville.—The cotton crop was nearly all gathered. The rainfall of the 26th benefited all growing crops, as the ground had been very dry.—John L. McCall.

Blackville.—Monthly mean temperature  $1.6^{\circ}$  below nor-

mal; precipitation 0.49 above.—G. D. C. Lange.

Bowman.—The month was remarkably dry. No heavy winds nor rains. Unusually fine weather for gathering cotton; quality good.—B. O. Evans.

Gillisonville.—Month pleasant and favorable for harvesting. Seven-eighths of the cotton crop was picked, ginned and sold. Corn very poor. Large quantity of hay secured in fine condition.—Sam P. Saltus.

Liberty.—Weather conditions were favorable for all growing crops. Plenty of moisture. Cotton opened rapidly and all of it matured. There is no top crop, but fields are green with second growth.—Jno T. Boggs.

Little Mountain.—At the end of the month many fields of cotton were picked out. Nearly all of the early planted corn was housed, and the yield was satisfactory. Some oats were sown.—Jno. M. Sease, M. D.

Longshore.—Cotton opened earlier than ever before known. Picking was hurried and nearly all early cotton was picked. The corn crop did well.—W. G. Peterson.

Lugoff.—Over three-fourths of the cotton crop was gathered during the month. Much hay cut and saved in fine condition. The corn crop is fair. Peas poor.—W. J. Burdell, M. D.

Santuc.—The month seemed wintry, with a cool period after every rain. A severe wind storm on the 30th damaged open cotton in places in this vicinity.—E. W. Jeter.

Society Hill.—Cotton has been harvested in fine condition, and yielded about three-fourth of an average crop. Most of the migratory birds have departed. Temperature  $2.2^{\circ}$  and precipitation 2.42 inches below normal.—Maj. J. J. Lucas.

Stateburg.—Weather conditions were very favorable for harvesting matured crops, but a partial drought was damaging to growing ones. During the time of drought, cotton began to shed its young fruit, especially on new growth, that in places is very promising, but the disastrous result was warded off by good rains during the last week of the month.—W. W. Anderson, M. D.

Summerville.—Heavy fogs on the 21st, 24th, 29th. Slight earthquake tremor on the 28th at 3:58 p. m.—Miss L. R. Gadsden.

Trenton.—Mean temperature  $4.6^{\circ}$  below normal, and precipitation 1.45 inches below the September normal.—C. A. Long.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR OCTOBER, 1902.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

MONTHLY MEAN TEMPERATURE AND PRECIPITATION WINDS FOR OCTOBER 1898

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. V. COLUMBIA, S. C., OCTOBER, 1902. No. 10.

## PROGRESS OF FARMWORK.

Although the temperature fell to, or below,  $40^{\circ}$  in nearly every section of the State, except along the immediate coast, there were but three mornings with general frosts and none of them were severe enough to materially injure vegetation except the most tender. The temperature was at times low enough to stop the growth of field crops and hasten their maturity, while hardier vegetation grew steadily throughout the month.

The average precipitation was in excess of the normal, and nearly every section shared in this excess, but over a few small areas there were slight deficiencies. The rainfall was quite evenly distributed, although it was lightest in the mountain districts. There was also a number of small localities where the precipitation was greatly in excess, to almost double the usual amount for October, and such localities were scattered over the greater portion of the State. This was more remarkable as few, if any, of the rainstorms were convectional in their nature. The rainstorms were generally of short duration, with long intervals between them, which afforded ample opportunity for completing the harvesting and gathering of field crops, so that by the close of the month rice harvest was practically finished, corn all housed, cotton picking finished, most of the hay crop saved and some sweet potatoes dug. The yields of the minor crops were generally good, although the pea crop was only fairly good. Cane yielded syrup of superior quality. The cotton crop varied greatly, and ranged from exceedingly poor to very good; some fields have a good top crop that was favored by the prevailing weather and with a continuation of warm weather and absence of killing frost will eventually open, as opening began late this month.

In the coast districts, fall truck did well, and looked promising, with sufficient moisture to sustain growth, but not enough to prove harmful.

Lands were in fine tilth for fall plowing, and this work made rapid progress, so that in places nearly the whole oats crop was sown, and generally the larger portion of it has been seeded. Early sown oats came up to good stands.

Lands were also prepared for wheat, but sowing was generally deferred, awaiting cooler weather, to avoid damage by the hessian fly.

The month as a whole was favorable for farmwork.

BAROMETER TABLE.

Wilmington .....	30.06	30.54	29.56

## HALOS AND PARHELIC CIRCLES.

Solar halos and parhelic circles are frequently reported, sometimes under the names of mock suns, or sundogs, and as the latter terms are not well understood by some voluntary observers, the following description taken from the June, 1902, number of the Monthly Weather Review may be of general interest:

"A great variety of circles have been observed about the sun; they may be divided into the three following classes:

"1. Halos, having the sun at the center. 2. Parhelic circles, passing through the sun. 3. Contact circles, tangent to the halos.

"At least three varieties have been observed: a, the most common of all having a radius of  $22^{\circ}$ ; b, a halo of  $46^{\circ}$  radius; c, the great circle of Hevelius, having a range of  $90^{\circ}$ . The first two of these are red on the inner side, or the side nearest the sun, while the third is nearly white.

"Four parhelic circles have been described; one parallel to the horizon, one perpendicular to it, and two very faint ones about  $30^{\circ}$  on either side of the latter. The four circles are white.

"A great number of contact circles have been observed tangent to the halos, most commonly occurring at the highest and lowest points of the  $22^{\circ}$  and  $46^{\circ}$  circles. The one tangent at the highest point of the  $46^{\circ}$  circles, and both those tangent to the  $22^{\circ}$  circle, have been described as horizontal, or circumzenithal, circles, but no description is known of a horizontal circle tangent to the lowest point of the  $46^{\circ}$  circle previous to that given by Mr. Warren. It frequently happens that the tangent circle alone is observed, the halo itself being invisible.

"At the numerous intersections of these various circles, parhelia, mock sun, or sundogs, are formed, often of great brilliancy."

CORRECTION.—September, 1902, report, page 5, maximum temperature at Lugoff,  $92^{\circ}$  on the 2nd and other date, should be  $93^{\circ}$  on the 3rd.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean for October, 1902, was 63.2° which is 0.8° below normal. The highest local mean was 69.7° at Beaufort, the lowest was 59.0° at Greenville. The highest maximum was 95° at Heath Springs on the 2nd, the lowest minimum was 30° at Clemson College on the 26th, make the State range 65°. The greatest local range was 62° at Heath Springs, the least 37° at Charleston. The mean of the daily maximum temperatures was 74.3°, of the daily minimum temperatures 52.0°.

Frost, First of the Season, Light.—Clemson College, 14; Anderson, Darlington, Greenville, Greenwood, Heath Springs, Santuc, Summerville and Winthrop College, 15; Bennettsville, Blackville, Bowman, Camden, Cheraw, Columbia, Conway, Edisto, Effingham, Gaffney, Longshore, Lugoff, St. George, St. Matthews, St. Stephens, Saluda, Smith's Mills, Trenton and Yemassee, 16; Society Hill, 28; Little Mountain and Yorkville 29.

Frost, First of Season, Heavy.—Camden, Cheraw, Columbia, Conway, Due West, Edisto, Effingham, Gaffney, Greenwood, Kingstree, Longshore, St. George, St. Matthews, St. Stevens, Smith's Mills and Yemassee 29.

Frost, Light, Other Dates of.—Anderson, Trenton, 29; Bennettsville, Cheraw, Little Mountain, 30, 31; Blackville, 17, 29, 30; Bowman, 17, 30, 31; Camden, Columbia, Lugoff, Saluda, Summerville, Yorkville, 30; Conway, 17, 29, 30, 31; Darlington, 28, 29, 30; Greenwood, 28; Heath Springs, 16; Longshore, 23, 30, 31.

## Precipitation, in Inches.

The precipitation averaged 4.40 inches which is 1.18 above normal. The greatest local amount was 7.34 at Batesburg and Winnsboro; the least 2.24 at Anderson. The greatest 24-hourly fall was 4.82 at Conway on the 10-11th. The average number of days with rain was 7, ranging from 4 at Bowman and Gillisonville to 9 at Cheraw and Gaffney.

Excessive Precipitation.—Batesburg, 28th, 2.25 in 10 hrs.; Beaufort, 10th, 3.38 in 12 hrs.; Conway, 10th-11th, 4.82 in 11 hrs.; Gillisonville, 27th-28th, 2.89 in 24 hrs.; Little Mountain, 26th-27th, 2.64 in 24 hrs.; Lugoff, 11th, 2.25 in 9 hrs.; Santuc, 26th-27th, 4.45 in 24 hrs.; Trial, 26th-27th, 2.85 in 24 hrs.; Yorkville, 27th, 2.26 in 24 hrs.

WEATHER.—The average number of clear days was 19, of partly cloudy 5, and of cloudy 7.

WINDS.—The prevailing direction of the wind was from the northeast at 18 stations, the west at 7, the north and northwest at 5 each, the south at 4, the east at 3, and the southeast and southwest at 1 each.

HIGH WINDS.—Beaufort, Heath Springs, Longshore, 11; Charleston, 27; Columbia, 11, 28; Gaffney, 28; Liberty, 5, 11, 21, 28.

## MISCELLANEOUS PHENOMENA (with dates).

Parhelion.—Santuc, 10.

Luna Corona.—Blackville, 14.

Solar Halos.—Charleston, 4, 6, 7, 8, 9, 12, 13, 18, 24; Santuc, 12.

Lunar Halos.—Blackville, Columbia, 9th; Charleston, 7, 8, 9, 12, 13, 20; Gillisonville, 11, 14, 15, 17; Little Mountain, 9, 18; Saluda, 10; Santuc, 12; Stateburg, 9, 12, 13, 21.

Fogs, dense.—Blackville, 18; Bowman, 17; Charleston, 18, 20; Saluda, 25; Stateburg, 3, 19; Summerville, 3, 18, 20; Sumter, 3, 4.

Thunderstorms.—Aiken, 6; Beaufort, 21, 27; Blackville, 4, 10; Bowman, 4, 27; Charleston, Lugoff, Summerville, 1; Gillisonville, 5, 26; Longshore, 4.

## REMARKS BY OBSERVERS.

Beaufort—Mean temperature 2°, and precipitation 3.68 inches above normal. More rain fell this month than in the last five months of 1901. Some cotton damaged by the rain. Cotton is a good crop, but does not come up to expectation.—S. M. Benton.

Bennettsville.—Frost on the 30th was heavy enough to hurt sweet potato vines.—John L. McCall.

Blackville.—Mean temperature 0.1°, and precipitation 1.66 above normal.—G. D. C. Lange.

Darlington.—The light frost on the 15th, 28th, 29th and 30th did perceptible damage.—E. R. McIver.

Gillisonville.—Month dry and favorable for harvesting. An abundance of good hay was saved. Very little cotton left in the fields. Cane grinding begun and syrup is of good quality.—Sam P. Saltus.

Greenville.—The frosts did no injury.—Mrs. S. A. Crittenden.

Heath Springs.—Corn about all gathered, with the yield good. Peas fairly good. Cotton about all sold; yield somewhat better than was expected. Not much grain has been sown.—J. A. Weaner.

Liberty.—Beautiful weather throughout the month. Rain were distributed as needed, although much hay and fodder was partly spoiled in the fields, yet little was seriously damaged. Splendid pea crop. Wheat and oats being sown.—Jno. T. Boggs.

Little Mountain.—The greater portion of the oats crop has been sown, and stands are good. All crops except sweet potatoes have been gathered.—Jno. M. Sease, M. D.

Longshore.—Enough frost on the 29th to nip tender vegetation. Splendid month for farmwork. Crops nearly all gathered. Cotton crop short. Corn fine. Peas very good.—W. G. Peterson.

Lugoff.—Some cotton still in the fields. Corn mostly gathered, as well as hay. Cotton is less than a full crop. The pea crop is fine.—W. S. Burdell, M. D.

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

Vol. V. COLUMBIA, S. C., NOVEMBER, 1902. No. 11.

## PROGRESS OF FARMWORK.

The month was characterized by abnormal warmth, and sustained even temperature until near its close, when, on the 27th and 28th, a moderate cold-wave swept over the State, causing the first killing frost of the season on the morning of the 28th, although at a number of points the temperature fell to freezing, or below, on the 27th. On the latter date, also, the first snow of the season fell, but was confined to the central, northern and western portions of the State, and at no point did the snowfall whiten the ground, but melted as it fell. This cold-wave put an end to growth of vegetation except along the immediate coast where it killed the most tender vegetation only. Up to the 27th, vegetation had continued to grow and develop, except such crops that have a defined period for growth, fruition and decay. Thus it was that cotton continued to bloom and fruit, and the earlier bolls to grow to maturity as far as size is concerned, but the heat was not great enough to cause many of even full grown bolls to open, while the October and November fruitage is absolutely of no commercial value. Late root crops, such as turnips and sweet potatoes grew rapidly throughout the greater portion of the month, where not gathered, and in many instances individual specimens attained prodigious size. However, nearly all field crops were gathered early in the month, while the weather was favorable, for no one could foresee the immunity from killing frost so far beyond its usual date of occurrence. The records of no other year show such a late date for the first killing frost.

The weather conditions were also favorable for preparing land for wheat and oats, and these grains were generally sown early in the month and came up to excellent stands, for the moisture conditions were as favorable as were the temperatures, for rapid germination. Some fields of oats sown in September grew so rank that they headed. This is said to be an unprecedented growth for November. In the truck raising districts, the conditions were equally favorable for fall and winter truck, both of which have excellent prospects.

Nearly all corn, peas, potatoes and other field crops were gathered and housed. Considerable late cotton was picked and the crop season came to an end at about its usual date,

although pasturage afforded green grazing to a much later date.

The effect of the sustained warm weather was, in a number of instances, remarkable and worthy of permanent record. Strawberries bloomed in favorable localities, and one patch near Columbia had about ten quarts nearly ready to pick, with some already fully ripe, when the frost came. Ripe strawberries were noted as far westward as Pickens county, while near Charleston the prospects were favorable for quite heavy shipments on a commercial scale, and in the latter locality they were scarcely injured by the frost. Apple blossoms were common, and some varieties bore apples the size of acorns. Another effect was the continued growth of turnips; specimens of the purple top variety were reported from various localities weighing from 11 to 22 pounds each. Sweet potatoes were grown weighing from 6 to 10 pounds each. Roses and jonquils bloomed in the open; even some jasmine blooms were noted. Stray kernels of corn that dropped on the fields while the crop was being gathered, came up, and specimens were noted on Thanksgiving day over a large field, from 6 to 12 inches in height.

BAROMETER TABLE.

Stations.	Mean.	Highest.	Lowest.
Augusta .....	30.10	30.41	29.59
Charleston .....	30.09	30.38	29.60
Charlotte .....	30.12	30.48	29.52
Columbia .....	30.11	30.44	29.59
Savannah .....	30.09	30.36	29.59
Wilmington .....	30.08	30.40	29.58

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean for November, 1902, was 59.2°, which is 5.0° above the normal. The highest local mean was 64.0° at Beaufort, the lowest was 53.7° at Greenville. The highest maximum was 89° at Seivern on the 15th, the lowest minimum was 22° at Greenville on the 28th, making the State range 67°. The greatest local monthly range was 62° at Seivern, the least was 43° at Society Hill. The mean of the daily maxima temperatures was 69.5°, of the daily minima 48.8°.

ICE.—Ice formed on the morning of the 28th over practically the whole State, and was generally the first ice of the season.

FROST, First Killing of the Season.—Clemson College, Darlington, Seivern, Summerville, Temperance 27th; Aiken, Allendale, Anderson, Batesburg, Beaufort, Bennettsville, Blackville, Bowman, Calhoun Falls, Camden, Charleston, Cheraw, Columbia, Conway, Due West, Effingham, Florence, Gaffney, Georgetown, Gillisonville, Greenville, Greenwood, Heath Springs, Kingstree, Liberty, Little Mountain, Longshore, Lugoff, Pinopolis, St. George, St. Matthews, St. Stephens, Saluda, Santuc, Smith's Mills, Society Hill, Spartanburg, Stateburg, Trenton, Winnsboro, Winthrop College, Yemassee, Yorkville, 28th.

## Precipitation, in Inches.

The precipitation averaged 3.80 inches, which is 0.95 above the normal. The greatest local amount was 7.01 at Summerville, the least 1.70 at Calhoun Falls. The greatest 24-hourly fall was 2.28 at Beaufort on the 30th. The average number of days with rain was 6, ranging from 3 at Allendale to 10 at St. Matthews and Summerville.

Excessive Precipitation.—None.

Snow.—Snow flurries were noted at 15 stations on the 27th, but at Longshore only was an appreciable amount recorded, where 0.2 inches fell. The other stations had only "trace". This was the first snow of the season.

Sleet.—Light sleet was reported from Bowman and Little Mountain on the 27th. The first sleet of the season.

Weather.—The average number of clear days was 13, partly cloudy 7, and cloudy 10.

Winds.—The prevailing direction of the wind was from the northeast at 16 stations, from the north at 8, from the east at 7, from the southeast and west at 5 each, from the northwest at 4, and from the south and southwest at 3 each.

High Winds.—Charleston 25, Columbia and Lugoff 26-27, Liberty 25-26.

## MISCELLANEOUS PHENOMENA (with dates).

Earthquake, slight.—Summerville, 20th.

Lunar Corona.—Santuc 17th; Sumter 16th.

Solar Halos.—Charleston, 2, 4, 9, 22, 24, 28; Santuc, 28; Stateburg, 24, 28.

Lunar Halos.—Charleston, 9; Liberty, 19; Little Mountain, Santuc, 17; Stateburg, 16, 17.

Thunderstorms.—Blackville, Columbia, 6; Bowman, Lugoff, Stateburg, 7; Charleston, 6, 30; Liberty, Longshore, 17; Saluda, 18.

Fogs, dense.—Allendale, 17; Beaufort, 16; Blackville, 17, 19, 22; Bowman, 12, 13, 21; Charleston, 16, 17, 18, 22; Columbia, 17, 22; Clemson College, 6; Gillisonville, 17, 21; Liberty, 18; Little Mountain, 7, 13, 14, 15, 17, 19, 22; Longshore, 19; Lugoff, 6, 17; Saluda, 10, 17, 19; Seivern, 12, 13, 14, 16, 17, 19, 21, 22; Society Hill, 16, 17; Statesburg, 14, 15; Summerville 1 to 17.

ERRATA.—October, 1902, report, on page 5, the date of the minimum temperature at Pinopolis 15th should be 16th; on page 6, the mean maximum temperature at Bowman 78.9 should be 78.8.

## REMARKS BY OBSERVERS.

Allendale.—First portion of the month was exceedingly warm with little precipitation; latter portion colder with heavy rain on the 30th.—R. D. Peebles.

Batesburg.—Corn and peas were about all housed; sweet potatoes gathered and banked. Fall grain looks fine and has not been affected by the flies this season.—E. J. Hite.

Beaufort.—Mean temperature 4.7° and precipitation 2.52

inches above normal. First frost of the season on the 28th, was one week later than the average for the last five years. The weather was good for harvesting. Considerable cotton still in the fields.—S. M. Benton.

Bennettsville.—The first killing frost of the season on the 28th came too late to damage growing crops to any great extent. Potatoes were all gathered; small grains were planted extensively, and look well.—John L. McCall.

Blackville.—Monthly temperature 4.3°, and precipitation 0.17 inch above normal.—G. D. C. Lange.

Bowman.—The month was remarkable for its even temperature. No killing frost until the 28th. Small grain looks remarkably well. Sugar cane grinding about finished.—B. O. Evans.

Darlington.—Light frosts on the 1st, 2nd and 23rd that injured the most tender vegetation only. Ice on the 27th.—E. R. McIver.

Gaffney.—It began snowing at noon of the 27th, and continued until 4 p. m., but the snow melted as it fell.—B. F. Camp.

Gillisonville.—Month dry and warm. Grasses continued green, and gardens continued their growth. Good harvesting season. Plenty of peas and potatoes. Sugar cane made good quality and quantity of syrup. Oats have excellent prospects.—Sam P. Saltus.

Greenville.—Light flurry of snow on the 27th.—Mrs. S. A. Crittenden.

Heath Springs.—Crops all harvested; yields very good. Small grain looks well. Farmers in better condition than for many years.—J. A. Weaner.

Liberty.—The first half of the month gave beautiful weather for sowing grain and gathering crops. First killing frost on the 28th. Wheat came up nicely, and more than the usual acreage has been sown, with the lands well prepared.—John T. Boggs.

Longshore.—Thunderstorm, high winds, rain and snow on the 27th. At 11:05 a. m. the temperature fell 8° in 5 minutes. Splendid weather during the month for farm work. Cotton about all gathered, and grains sown.—W. G. Peterson.

Lugoff.—The snow on the 27th was a light flurry, lasting about 5 minutes. Crops are all gathered. A few planters have sown some oats.—W. J. Burdell, M. D.

Santuc.—Until near its close, the month was favorable for farmwork, and vegetation continued to grow until the 28th, when a general killing frost occurred. A snow flurry occurred on the 27th. Nearly all crops are housed.—E. W. Jeter.

Society Hill.—Killing frost occurred on the 28th. Winter oats are very promising, having fine stands and growing nicely. Cotton all gathered and sold, as a rule.—Maj. J. J. Lucas.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR DECEMBER, 1902.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

COLUMBIA, S. C.:  
WEATHER BUREAU OFFICE.

## TOTAL PRECIPITATION FOR DECEMBER, 1902

U. S. DEPARTMENT OF AGRICULTURE.

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. V. COLUMBIA, S. C., DECEMBER, 1902. No. 12.

PROTECT THE BIRDS.

In the Annual report for 1901, attention was called to the great damage done by insects of various kinds, during that year. This year the damage has been even greater, especially to corn by cut worms and other worms. However, there is scarcely a crop grown on a commercial scale but what has its insect enemy, or enemies, that damage it to some extent and reduce its yield. It might in truth be said that no crop is exempt. Remedies are of avail to check the damage, if applied, but the great difficulty lies in having enough farmers apply remedies to give relief. Most of them take chances of saving as much of the crop as the insects are unable to destroy, and are satisfied with that. The damage increases from year to year, as the natural enemy of insects, birds of all kinds, decreases in number. The boy with the gun does the real mischief. The hope of the farmer of this State is that the Legislature will pass stringent laws to protect the birds, and that these laws, when placed on the statutes, will be strictly enforced. The wanton destruction of birds threatens seriously the agricultural interests of South Carolina.

PROGRESS OF FARMWORK.

With a mean temperature slightly above the normal, and no decided cold weather until near the close of the month, although with frequent frosts in the interior, and with well distributed rainfall, quite heavy in the extreme eastern and extreme western portions, farmwork incidental to December made favorable progress, except in the western counties where wheat seeding could not be finished owing to the unfitness of the soil by reason of being too wet. Generally, however, wheat seeding was finished, and came up to good stands. Oats did well, and look promising and were not materially hurt by the cold weather. The remnants of field crops were gathered and housed, and some progress was made in preparing seed beds for tobacco. In localities, late, full-grown but unopened cotton bolls began to open after the freezing weather set in. Cotton is not

all picked in Beaufort and some other counties.

The month was favorable for trucking interests, both on growing vegetables and for the preparation of lands for early Spring crops.

BAROMETER TABLE.

Stations.	Mean.	Highest.	Lowest.
Augusta .....	30.14	30.43	29.49
Charleston .....	30.14	30.49	29.51
Charlotte .....	30.14	30.55	29.47
Columbia .....	30.15	30.52	29.42
Savannah .....	30.13	30.44	29.56
Wilmington .....	30.12	30.52	29.53

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for December, 1902, was 46.8°, which is 0.6° above normal. The highest local mean was 53.6° at Beaufort, the lowest 40.6° at Greenville. The highest maximum was 85° at Seivern on the 19th, the lowest minimum was 10° at Trial on the 28th, making the State range 75°. The greatest local range was 74° at Seivern, the least 49° at Due West and Yorkville. The mean of the daily maxima was 56.6°, of the daily minima was 37.1°.

Precipitation, in Inches.

The precipitation averaged 4.26 inches, which is 1.16 above the normal. The greatest local amount was 6.80 at Conway; the least 1.92 at Bennettsville. The greatest 24-hourly fall was 3.08 at Gillisonville on the 3-4th. The average number of days with rain was 7, ranging from 4 at Allendale, Bowman and Trial to 11 at Santuc and Winthrop College.

Excessive Precipitation.—Allendale, 2nd, 1.05 in 1 hour; Allendale, 4th, 1.70 in 1 hr. 15 mins.; Barksdale, 15-16th, 3.00 in 24 hours; Beaufort, 3-4th, 3.04 in 24 hours; Gillisonville, 3-4th, 3.08 in 12 hrs. 15 mins.; Charleston, 3-4th, 2.97 in 24 hours.

Sleet.—Trace of sleet was noted at Columbia on the 16th; Greenville, 4th, 29th; Liberty, 15th, 29th.

Snow.—Trace of snow was observed at various stations and dates, as follows: Batesburg, Little Mountain, 27th; Clarks Hill, Longshore, Saluda, Seivern, Trenton, 26th; Columbia, Gaffney, 16th; Liberty, 29th.

Weather.—The average number of clear days was 14, partly cloudy 6, and cloudy 11.

Winds.—The prevailing direction of the wind was from the northwest at 12 stations, from the north at 9, from the east at 5, from the northeast at 8, from the west at 7, from the southwest at 4 and from the south at 2.

High Winds.—Beaufort, Charleston, Gillisonville, Heath Springs, 4; Bowman, 4, 12; Columbia, 4, 5, 16, 21; Liberty, 4, 21, 25; Summerville, 4, 16.

## REMARKS BY OBSERVERS.

Batesburg.—The weather was very changeable with considerable rain. Wheat and oats look well.—E. J. Hite.

Beaufort.—Mean temperature  $1.3^{\circ}$ , and precipitation 2.80 inches above normal. The season has been unusually late. First ice formed on Christmas day. Cotton picking is not yet finished. Turnips are not doing well. Oats are generally up and are in fair condition. Truck farmers preparing lands for every crop.—S. M. Benton.

Bennettsville.—Nearly all field crops are gathered. Oats are doing well. Nearly average crops were made during the past year.—Jno. L. MacCall.

Blackville.—Monthly mean temperature  $0.3^{\circ}$ , and precipitation 1.21 inches above normal.—G. D. C. Lange.

Bowman.—Real winter weather began on the 26th, with a steady wind from the northwest. Small grains do not seem to be damaged and look well.—B. O. Evans.

Gillisonville.—Month moderately warm, and damp. There were few cold days. Heavy rainfall early on the 4th. There is more water on flat lands and in bays, than has been noted in several years. Oats escaped serious damage.—Sam P. Saltus.

Liberty.—Continued wet weather caused wheat sowing to cease before all the contemplated lands were planted. The ground was not dry enough to permit plowing any day this month, so seeding was not finished.—Jno. T. Boggs.

Longshore.—With the exception of sowing wheat, the month was one of comparative rest for the farmers.—W. G. Peterson.

Santuc.—The weather was mild for December, until the 26th, when for several days there were hard ground freezes. White frosts were of frequent occurrence, but the general mildness allowed the remnants of field crops to be gathered under favorable conditions.—E. W. Jeter.

Society Hill.—Oats tillering finely and are unhurt by cold weather thus far. Preparations being made for seeding tobacco beds.—Maj. J. J. Lucas.

Stateburg.—Since the freezing temperatures during the last week of the month, the top crop of cotton has begun to pop open briskly and bids fair to add an appreciable amount to the total yield.—W. W. Anderson, M. D.

Trenton.—Precipitation 0.78 inch more than normal for December, and 0.67 inch more than the average for the twelve months.—C. A. Long.

## MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 11, 21, 24, 25, 30; Stateburg, 24.  
Lunar Coronæ.—Blackville, 14; Santuc, 13; Stateburg, 14.

Lunar Halos.—Blackville, 19; Clarks Hill, 13; Columbia, Stateburg, 10, 11; Greenville, 10; Little Mountain, 11, 21; Santuc, 7, 10, 20.

Thunderstorms.—Beaufort, Charleston, 2, 4; Gillisonville, 2, 3, 4; Summerville, 1.

Dense Fogs.—Barksdale, 13, 15, 16; Blackville, Santuc, 13; Clarks Hill, 2; Charleston, 7; Liberty, 2, 13, 22, 30; Seivern, 12; Stateburg, 5, 12; Summerville, 18, 20.

## NOTES.

The observer at Walhalla has been sick for several months, but is now convalescent and hopes to resume observations on January 1st.

There was a change of voluntary observers at Barksdale, owing to Mr. E. E. Putnam having removed from that place. The Bureau was fortunate to secure the services of Mr. E. V. Garrett as observer, who began observations in December.

The list of stations has been increased during the month by the accession of Clark's Hill, Edgefield county, with Mr. Wm. S. Middleton as observer.

Owing to the frequent absence from that city, Prof. W. A. Buckner, the voluntary observer at Sumter, has resigned. The Bureau has been unable, as yet, to secure a suitable observer to succeed Prof. Buckner.

The station at Pinopolis is being supplied with a complete new outfit of standard thermometers, instrument shelter and rain gauge.

Thirty-two stations have complete monthly records for the year 1902, which is a very gratifying showing. On the data from these thirty-two stations will be based the annual mean values for the State for all data, although the data for the other stations will be published for the months on which received. However, as the Annual Report has a wider circulation and is more generally consulted, it becomes very desirable to have as many stations as possible represented in the mean values, and the time to begin a complete year record for 1903, is with January.

Late December Report.—Georgetown, mean temperature  $49.6^{\circ}$ , departure plus  $0.9^{\circ}$ ; maximum temperature  $71^{\circ}$  on the 5th; minimum  $40^{\circ}$  on the 27-28th. Total precipitation 5.1 inches, departure plus 2.28. Number of rainy days, five.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR JANUARY, 1903.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

RALEIGH, N. C.  
WEATHER BUREAU OFFICE.

1903.

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JANUARY, 1906

UNION PACIFIC RAILROAD

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VI. COLUMBIA, S. C., JANUARY, 1903. No. 1.

## PROGRESS OF FARMWORK.

Although the mean temperature averaged below normal, the month seemed to be a mild one as there were no severely cold days during January, and there was but little alternate thawing and freezing to injure fall sown grains. The low temperature was due, largely, to more than the usual amount of cloudiness that reduced the mean of the maximum temperatures below the usual January figures at most stations, while, on the contrary, the mean minimums were slightly higher.

There was only a slight excess in precipitation over the greater portion of the State, yet, owing to the cloudiness, the ground was continuously damp, and in most places too wet to be plowed, or to permit other field work. Along the coast, where the principal truck raising regions are located, the weather conditions were entirely favorable for winter truck, there having been sufficient moisture and an almost entire absence of injurious frosts or freezes. In the tobacco districts, seed beds were burnt over, and many beds seeded.

The condition of wheat, oats and other fall sown grains, continued very promising, except that some oats grew too rank exposing them to possible severe injury from subsequent freezing weather. Both wheat and oats stood well. As a rule, country roads were in bad condition, restricting the hauling of fertilizers, which, nevertheless, made considerable progress.

Barometer and Wind Table for January, 1903.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for January, 1903, was 43.7°, which is 1.1° below normal. The highest local mean was 49.4° at Beaufort, the lowest, 37.5° at Greenville. The highest maximum was 77° at Yemassee on the 29th, the lowest minimum was 13° at Liberty on the 13th, making the State range 64°. The greatest local monthly range was 59° at Trial, the least 46° at Heath Springs. The mean of the daily maxima was 52.4°, of the daily minima 35.0°.

## Precipitation, in Inches.

The precipitation averaged 3.85 inches, which is 0.37 above the normal. The greatest local amount was 7.10 at Georgetown; the least 2.40 at Walhalla. The greatest 24-hourly fall was 2.05 at Bowman on the 27th. The average number of days with rain was 11, ranging from 4 at Due West to 17 at Beaufort and Summerville.

Excessive Precipitation.—None.

Hail.—Summerville, 7th.

Sleet.—Trace of sleet was recorded at Aiken, Cheraw, Greenwood, Heath Springs, Santuc, Yorkville on the 20th; Allendale, Blackville, 7th; Anderson (?), Barksdale 21-22nd; Clarks Hill, Trenton 14th; Clemson College 10th; Gaffney, 20-21st; Gillisonville, Seivern, Spartanburg, 19th; Liberty, 11th, 20th; Saluda; 14th, 20th; Stateburg, 14th, 19th.

Snow.—Snow flurries, the flakes melting as they fell, were recorded at Barksdale, Bowman, Longshore, Saluda on the 6th; Spartanburg on the 20th.

Ice.—During the early morning and forenoon of the 20th, over the western and central portions of the State, the rain froze as it fell, covering exposed objects to depths varying from a thin coating to nearly half an inch of ice.

Weather.—The average number of clear days was 10, partly cloudy 6, and cloudy 15.

Winds.—The prevailing direction of the wind was from the west at 17 stations, from the southwest at 13, from the northwest at 8, from the north at 5, from the east and northeast at 4 each, and from the south at 2.

High Winds.—Charleston, Yorkville, 30; Columbia, 7, 30; Clarks Hill 8; Gillisonville, 7, 8, 30; Heath Springs, 4, 30; Liberty, 7, 8, 9, 30; Bowman, 7; Longshore, 8, 9; Saluda, 8, 12; Seivern, 29; Summerville, 6, 7, 8, 9, 29.

## ERRATA.

In the Annual Report for 1901, the following corrections should be noted: On page 5, Camden, total precipitation 58.05 should be 58.65; Gaffney, 65.62 should be 66.62; Greenville, 77.50 should be 77.83; Liberty, 75.52 should be 76.52; Yemassee, 38.28 should be 28.38.

On page 6, Florence, mean temperature for September 73.8, should be 74.0.

On page 9, Due West, precipitation for December omitted, should be 6.94; Gaffney precipitation for November 0.41, should be 1.41; Greenville, precipitation for December 8.89, should be 9.22.

## MISCELLANEOUS PHENOMENA (with dates).

Lunar Corona.—Santuc, 14.

Solar Halos.—Charleston, 10, 15, 16, 29, 30, 31.

Lunar Halos.—Charleston, 10, 13, 15; Little Mountain, 14; Santuc, 13.

Earthquakes.—An earthquake shock was noted at nearly station on the evening of the 23d, at about 8:11 p. m. (The times varied from 8:08 to 8:16 p. m.), accompanied by a rumbling noise, and a jarring rather than an undulating movement or oscillation. No damage resulted. A second shock, very slight, was noted at Summerville on the 29th at 7:15 a. m.

Thunderstorms.—Barksdale, Cheraw, Clemson College, Darlington, Greenville, Heath Springs, Liberty, Longshore, Santuc, Society Hill, Rock Hill 28; Beaufort, 7, 11, 28; Blackville, Stateburg, Trial, 7; Bowman, 8; Charleston, Summerville, 2, 7; Gillisonville, 7, 28.

Dense Fogs.—Barksdale, 23, 24, 25, 28; Beaufort, 2, 20, 27, 28, 29; Blackville, 2, 25, 27, 28, 29; Charleston, 2, 3, 11, 20, 21, 24, 25, 26, 27, 28, 29; Columbia, 21, 27, 28; Clemson College, 24, 25, 26, 27, 28, 29; Gillisonville, 8; Heath Springs, 26, 27; Liberty, 25, 26, 29; Santuc, 21, 26; Seivern, 26; Society Hill, 28; Spartanburg, 21, 30; Stateburg, 2, 25, 27, 28; Yorkville, 21, 22, 26, 28, 29.

## REMARKS BY OBSERVERS.

Aiken.—Very little precipitation for the number of partly cloudy and cloudy days.—C. F. McGahan, M. D.

Allendale.—Month unusually cloudy. Temperature and precipitation above normal. Very warm and sultry at the close of the month.—R. D. Peeples.

Barksdale.—Wheat and oats are doing well. There was much fog from the 21st to 28th.—E. V. Garrett.

Batesburg.—Grain crops look much better than for several years. Little or no farm work done except hauling guano.—E. J. Hite.

Beaufort.—Mean temperature  $0.9^{\circ}$  below normal; precipitation 2.07 above. Work on truck farms is well advanced. Green peas mostly planted and some are up. Oats and turnips look well.—S. M. Benton.

Bennettsville.—Oats are doing well.—Jno. L. McCall.

Blackville.—Monthly mean temperature  $1.5^{\circ}$  below normal, and precipitation 0.43 below.—G. D. C. Lange.

Bowman.—A very perceptible earthquake shock was felt on the night of the 23rd at 8:10 p. m. Roads are bad from continued heavy hauling, and little sunshine.—B. O. Evans.

Cheraw.—Night of 19th there was some sleet followed by

freezing rain on the 20th. Thunderstorm night of 28th. High sw. winds 28th-29th.—W. R. Godfrey.

Gaffney.—Sleet and freezing rain on 20th-21st.—B. F. Camp.

Gillisonville.—Month disagreeable and wet with several flurries of snow. Little field work practicable. Winter oats in good condition. Earthquake about 7:35 (?) of 23rd. Wave movement from east to west, severe enough to cause light objects to rock.—Sam P. Saltus.

Heath Springs.—Small grains look well.—J. H. Weaner.

Liberty.—Farmwork almost at a standstill owing to wet and freezing weather. No plowing practicable. Wheat sowing could not be finished consequently acreage is below an average. Small grains look well.—Jno. T. Boggs.

Little Mountain.—The continued wet weather kept the land too wet for any field work during the whole month.—J. M. Sease, M. D.

Longshore.—On the 7th there was lightning towards the south. A thunderstorm at 4 p. m. of the 28th.—W. G. Peterson.

Saluda.—Earthquake at 8:15 p. m. of 23rd.—Alvin Etheridge.

Santuc.—On the 7th much lightning could be seen towards the southeast. High winds on the 8th. On the 28th a heavy thunderstorm occurred, coming from the west with much lightning and little rain. The month was a wet one.—E. W. Jeter.

Society Hill.—Rutabagas that were left in the ground are uninjured by frost. Oats are very promising. Temperature normal; precipitation 0.57 below.—Maj. J. J. Lucas.

Spartanburg.—19th, midnight, there was snow, sleet and rain. The snow was very light.—F. P. Robinson.

Stateburg.—The top crop of cotton, for the season just past, was a remarkable one in this section. Picking has been going on at pretty regular intervals during the past two months and appearances indicate that there remains more to pick. The year opens rather gloomy with only 5 clear days and 19 cloudy ones. An earthquake on the 23rd.—W. W. Anderson, M. D.

Summerville.—A little thunder was heard on the 2nd. Heavy earthquake (two distinct reports at very short interval) on night of 23rd, 8:11 p. m., lasting about 6 seconds. A tremor on the 29th, 7:15 a. m.—Miss L. R. Gadsden.

Trenton.—Precipitation 0.82 less than the January normal.—C. A. Long.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VI. COLUMBIA, S. C., FEBRUARY, 1903. No. 2.

## PROGRESS OF FARMWORK.

The weather was unfavorable, during February, for the rapid progress of farmwork, owing to the heavy precipitation, at comparatively short intervals, over all but the immediate coast regions of the State, that kept the soil continuously wet and unfit for plowing, although, in places, some plowing was accomplished. Farmwork was restricted, as a rule, to clearing lands, and terracing them where needed, and to the hauling of commercial fertilizers. The latter was difficult owing to the soft conditions of the roads where they were used for heavy traffic.

Wheat and oats did fairly well, maintaining their previous promising condition, except that some oats were injured by cold from the 17th to the 20th. The injury was confined largely to certain types of soil, especially red lands. Few Spring oats were sown as the lands were too wet.

In the truck raising regions, along the coast, the cold weather killed some early peas and other tender vegetation, but, on the whole, the damage was slight. Growth, however, was checked for a time, but owing to subsequent warm weather truck soon regained its advanced condition.

Over the southeastern portion of the State, plum trees began to bloom early in the month, and as far west as Columbia peach blooms were noted at the middle of the month. The subsequent freezing weather killed some of the buds, but reports from the principal fruit growing sections indicate that the damage was confined largely to one variety of peaches, the Elberta.

At the close of the month, farmwork was backward with no planting done except tobacco seed beds.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for February, 1903, was 49.0°, which is 3.0° below normal. The highest local mean was 54.1° at Beaufort, the lowest 42.4° at Greenville. The highest maximum was 81° at Due West on the 15th, Gillisonville on the 16th and Seivern on the 14th; the lowest minimum was 11° at Barksdale on the 18th, making the State range 70°. The greatest local monthly range was 64° at Due

West, the least 47° at Beaufort. The mean of the daily maxima was 59.5°, of the daily minima 38.5°.

Frost.—Freezing weather and frosts occurred over the whole State on the 17th and 18th, and also in the interior on the 19th and 20th. Light frosts were also recorded at Bennettsville on the 25th and 27th.

## Precipitation, in Inches.

The precipitation averaged 7.03 inches, which is 2.34 above the normal. The greatest local amount was 12.48 at Clemson College; the least 2.07 at Charleston. The greatest 24-hourly fall was 3.90 at Florence and Camden on the 7-8th. The average number of days with rain was 10, ranging from 4 at Georgetown to 14 at Summerville.

Excessive Precipitation.—(2.50 inches or more in 24 hours): Batesburg, 8th, 2.45 in 15 hours; Beaufort, 27th, 2.45 in 7 hours; Calhoun Falls, 8th, 3.25 in 24 hours; Camden, 7-8th, 3.90 in 24 hours; Cheraw, 7-8th, 2.59 in 24 hours; Clemson College, 16-17th, 2.90 in 24 hours; Columbia, 7-8th, 3.19 in 24 hours; Darlington, 7th, 3.60 in 24 hours; Florence, 7-8th, 3.90 in 24 hours; Greenville, 15-16th, 3.00 in 24 hours; Greenwood, 7-8th, 2.74 in 21 hours; Liberty, 28th, 2.60 in 24 hours; Longshore, 6-7th, 3.80 in 24 hours; Pinopolis, 27th, 3.13 in 24 hours; Society Hill, 6-7th, 3.45 in 24 hours; Stateburg, 7-8th, 3.12 in 24 hours; Temperance, 7th, 3.50 in 24 hours; Winnsboro, 7th, 3.38 in 24 hours.

Snow.—Trace of snow was recorded at Conway on the 6th, and at Santuc on the 15th.

Sleet.—Sleet occurred at Allendale on the 5th; Beaufort, Charleston, Darlington, Gillisonville, Longshore and Summerville on the 6th; Sumter on the 7th.

Weather.—The average number of clear days was 10, partly cloudy 7, and cloudy 11.

Winds.—The prevailing direction of the wind was from the southwest at 22 stations, from the west at 10, the south at 8, the north at 7, the northeast at 6, the east at 3, and the northwest at 2.

High Winds.—Barksdale, 4; Beaufort, Gaffney, Seivern, Stateburg, 17; Blackville, 11, 16, 27; Bowman, 11, 17; Calhoun Falls, Darlington, Society Hill, Trenton, 16; Cheraw, 17, 27; Clarks Hill, 4, 17, 28; Columbia, 4, 16, 17, 28; Gillisonville, 11, 16, 17, 27, 28; Heath Springs, 4, 16, 17, 18; Liberty, 4, 8, 11, 17, 28; Longshore, 4, 16, 17, 27; Saluda, 15, 17; Spartanburg, 3, 16, 27; Sumter, 12; 17; Yorkville, 17, 18, 28.

## MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Beaufort, 20; Charleston, 2, 5, 6, 9, 10, 13, 17, 19, 20, 23, 25, 26; Liberty, Santuc, 25; Stateburg, 20, 23, 25.

Lunar Halos.—Charleston, 4, 5, 6, 9, 10, 13; Columbia, Liberty, Little Mountain, Seivern, 9; Gillisonville, 4, 8, 10; Stateburg, 9, 10.

Thunderstorms.—Allendale, Bowman, Due West, Trenton, Yorkville, 28; Anderson, Columbia, Stateburg, 16; Barksdale, 3; Beaufort, 11, 27; Blackville, Cheraw, Gaffney, Liberty, Longshore, Santuc, Seivern, Winthrop College, 16, 28; Charleston, Summerville, 11; Clarks Hill, 17; Darlington, 27; Little Mountain, 16, 27; Saluda, 17, 27.

Dense Fogs.—Barksdale, 27; Greenville, Longshore, Society Hill, Yorkville, 3; Beaufort, Heath Springs, Little Mountain, 3, 15; Blackville, 3, 15, 21; Camden, Clarks Hill, 15; Charleston, 3, 4, 14, 15, 16, 27; Cheraw, 3, 12, 15; Columbia, 2, 3, 8, 12, 15; Gaffney, 4, 5; Gillisonville, 3, 10, 15; Liberty, 3, 11, 15; Seivern, 1, 2, 5, 13, 14; Stateburg, 2, 3, 15.

## REMARKS BY OBSERVERS.

Allendale.—Weather exceedingly cloudy with much rain. Precipitation above normal. The close of the month was warm and rainy.—R. D. Peeples.

Barksdale.—Winter crops are doing well, although some oats were killed. There has been but little plowing accomplished, owing to the soil having been too wet.—E. V. Garrett.

Beaufort.—Mean temperature  $1.2^{\circ}$  above normal, precipitation 1.96 inches above. The proportion of clear days was much smaller than usual. The cold period of the 17-18th damaged first plantings of early peas considerably. Excessive rains have delayed plowing for corn and cotton.—S. M. Benton.

Blackville.—Mean temperature  $4.1^{\circ}$ , and precipitation 0.28 inches above normal.—G. D. C. Lange.

Bowman.—The weather was unfavorable for farmwork, which is backward. Small grain looks promising. Plum trees and some peach trees are in bloom.—B. O. Evans.

Clarks Hill.—Peach buds began swelling on the 15th, but the freeze of the 18th killed many of the buds, about three-fourths of the Elberta being killed. Other fruits uninjured. Grain was slightly injured. Ground has been too wet to plow.—Wm. S. Middleton.

Darlington.—Violent winds on the night of the 16th, damaged fences and trees only.—E. R. McIver.

Gillisonville.—Month bleak and wet; field work backward. High winds damaged trees. Plum and peach trees in full bloom. Oats in promising condition.—Sam P. Saltus.

Heath Springs.—Although there was an unusual amount

of rain this month, the farmers have made some progress in farmwork, such as clearing and terracing lands. Small grain looks well.—J. A. Weaner.

Liberty.—Only three days were dry enough to permit plowing, and but little Spring oats were sown. Winter has been too wet to sow the usual acreage to wheat, and that sown is not doing well. Some fruit buds are showing.—Jno. T. Boggs.

Little Mountain.—The cold, from the 17th to the 20th, injured oats on red lands. Wheat is fine.—Jno. M. Sease, M. D.

Longshore.—Tornadoes passed through this country on the 16th. There were three separate tornadoes, touching widely separated points; 30 or more houses were blown down; also a great deal of timber and fencing. There was a severe wind, rain and thunder storm about 5 a. m. of the 28th.—W. G. Peterson.

Saluda.—A gale at 4.30 p. m. of the 16th, destroyed the instrument shelter and blew down some houses.—Alvin Etheridge.

Santuc.—The month was rainy, and there were many high winds. Little farmwork was done, and hauling was largely suspended. The cold from the 17th to the 20th, injured small grain, but the damage was slight.—E. W. Jeter.

Society Hill.—Preparation for Spring crops is very backward, owing to continued and excessive precipitation. Small grain is fine, particularly oats. Temperature  $3^{\circ}$  below and precipitation 3 inches above normal.—Maj. J. J. Lucas.

Stateburg.—Weather conditions very unfavorable for farmwork, owing to the wetness of the soil. The storm of the night of the 16th blew down the steeple of the church and damaged the structure to the extent of about \$3,000.—W. W. Anderson, M. D.

Summerville.—Vegetation budded, but many buds were killed by ice on the 17th.—Miss L. R. Gadsden.

Temperance.—The raingage was overturned by wind on the 11th and again on the 16th, making the rainfall measurement incomplete.—J. R. Reaves.

Trenton.—On the night of the 16th, the winds blew down some barns, small houses, and some trees. Precipitation 2.97 inches more than the normal, and 3.15 more than the average for the first two months.—C. A. Long.

ERRATA.—January, 1903, report, page 5, Clemson College mean temperature  $39.2^{\circ}$ , should be  $39.4^{\circ}$ ; same page, Seivern maximum temperature  $71^{\circ}$  on the 29th, should be  $75^{\circ}$  on the 1st. Page 6, mean of the maximum temperatures at Clemson College  $50.0^{\circ}$ , should be  $50.4^{\circ}$ .

No. 3.

## PROGRESS OF FARMWORK.

The month under review was the warmest March of record, and was noteworthy for the evenness of its temperature. There was a cool period on the 1st and 2nd, with thin ice and light frosts over the western portions of the State, and another cool wave crossed the State from the 25th to the 27th, that caused light frosts over all but the southeastern portions, but as a whole, the month was remarkably free from frosts. Vegetation of all kinds grew rapidly, owing to the continuous warm weather, and was in an unusually advanced stage by the close of the month. Nevertheless, farm-work was greatly delayed, and preparations for planting, and planting operations were more backward than usual, due to excessive precipitation and frequent rains, especially over the western portion of the State, and also to excessive cloudiness and light winds that kept the ground from drying and becoming fit to plow. The slow drying of the soil, by percolation instead of by surface evaporation, left it in excellent tilth, when it became dry enough to work, so that the weather conditions were not altogether unfavorable and possibly quite beneficial, though retarding farmwork. The fine condition of the soil being compensatory for the lateness of the season.

The climatic conditions were more favorable over the eastern counties than over the western ones. In the former, uplands were largely prepared for corn, cotton, and tobacco, and much corn, and some cotton were planted, and some tobacco set out, while the usual acreage of minor field crops and gardens was cultivated, planted and brought to stands. A few rice fields were planted, but most of the land devoted to this crop was too wet to work. Tobacco plants, in beds, were ready to transplant much earlier than usual, owing to the warm weather.

Wheat suffered little injury from the weather, although theessian fly damaged it in places, and some fields were attacked by rust, but its condition is generally promising. The oats crop suffered serious impairment from the ravages of an insect known as the "grain louse". Fields were first infested in the south central counties, but by the end of the month nearly every field in the eastern, central and a few western counties was affected. The plant, when infested, turns red,

then withers and dies.

Fruit trees began blooming in February and continued throughout March, and the prospects for a full crop are excellent, except in a few localities in the central Savannah valley where peaches were largely killed by the February freeze. Truck grew rapidly and shipments of strawberries, beets, peas, cabbage, lettuce and asparagus were begun from the more southerly districts. Gardens were cultivated over the whole State, and the usual amount of minor field crops planted in their season. Trees put on full foliage, and pastures afforded grazing. Owing to frequent freshets, low land oats were destroyed in the river valleys by flooding.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for March, 1903, was 60.4°, which is 5.9° above normal. The highest local mean was 64.4° at Yemassee, the lowest 54.3° at Greenville. The highest maximum was 84° at Yemassee on the 21st; the lowest minimum was 26° at Clemson College on the 1st, making the State range 58°. The greatest local monthly range was 53° at Sumter, the least was 32° at Charleston. The mean of the daily maxima temperatures was 69.4°, of the daily minima was 51.4°.

Frost.—Killing frost was noted at Little Mountain and Santuc on the 2d, Yorkville 2d, 3d; heavy frost at Gillisonville 26th, Longshore 27th. Light frosts were noted as follows: Blackville, Gillisonville, 27; Bowman, Santuc, Seivern 26, 27; Cheraw, 2, 25; Clarks Hill, Clemson College, Columbia, Little Mountain, 26; Greenville, 27, 30, 31; Longshore, 3, 26; Saluda, Sumter, Winthrop College, Yorkville, 25, 26; Summerville, 1, 25, 26; Temperance, 25.

## Precipitation, in Inches.

The precipitation averaged 5.92 inches, which is 2.16 above the normal. The greatest local amount was 11.14 at Batesburg; the least 1.53 at Bowman. The greatest 24-hourly fall was 3.75 at Florence on the 30th. The average number of days with rain was 10, ranging from 5 at Bowman to 15 at Summerville.

Excessive Precipitation.—(2.50 inches or more in 24 hours): Barksdale, 29, 2.60 inches; Beaufort, 28-29, 3.00 inches; Calhoun Falls, 29-30, 3.15 inches in 16 hours; Florence, 29-30, 3.75 inches; Gaffney, 22-23, 3.48 inches; Georgetown, 29, 2.70 inches; Liberty, 22-23, 2.90 inches; Little Mountain, 21, 3.25 in 20 hours; Longshore, 21-22, 2.58 inches; Temperance, 29, 2.63 inches; Winnsboro, 29, 3.05 inches.

Weather.—The average number of clear days was 7, partly cloudy 9, and cloudy 15.

Winds.—The prevailing direction of the wind was from the northeast at 21 stations, from the east at 14, the southwest at 7, from the south at 6, from the north at 3, from the west at 2, and from the southeast at 1.

High Winds.—High winds, reaching the velocity of a gale in places, prevailed over the whole State on the 29th. Other than this there were no high winds, and few windy days.

## MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 7, 8, 15, 19, 20, 21, 22, 25, 28; Stateburg, 15, 25.

Lunar Halos.—Bowman, 6, 7, 8, 9, 10, 11; Charleston, 6, 7, 8; Columbia, 6, 7; Little Mountain, 6; Stateburg, 7, 8, 10.

Thunderstorms.—Allendale, Trenton, Winthrop College, 21; Beaufort, 21, 22, 24; Blackville, Gillisonville, 21, 22; Bowman, 7; Charleston, 23; Cheraw, 8, 20, 21, 22; Columbia, Little Mountain, 8, 21, 22; Due West, 22; Gaffney, 5; Greenville, 10, 20; Liberty, 7, 20; Longshore, 5, 20, 21, 22; Saluda, 8, 21, 22, 23; Santuc, 5, 7, 20, 21, 22; Seivern, 8, 9, 21, 22; Stateburg, 7, 9, 20, 21, 22; Summerville, 2, 21, 22; Sumter, 8, 21; Trial, 7, 22.

Dense Fogs.—Barksdale, 8, 9, 10, 11; Beaufort, 5, 6, 7; Blackville, 6, 7, 8, 10, 11, 13, 20; Bowman, 5, 8, 11, 12, 13, 14; Charleston, 6, 7, 8, 10, 19; Clarks Hill, 5, 6, 12; Clemson College, 25, 28; Columbia, 6, 10, 20; Edisto, 6, 10; Gaffney, 6; Greenville, 6, 8, 10, 13, 14; Gillisonville, 5, 6, 7, 10, 11, 12, 20; Heath Springs, 6, 9, 20; Liberty, 6, 8, 9, 10, 11, 22, 23; Little Mountain, 10, 18, 19; Longshore, 7; Saluda, 6, 7, 20, 24; Santuc, 6, 10, 11; Seivern, 6, 10, 20, 27; Society Hill, 10, 20; Stateburg, 7, 8, 12, 17, 19, 20; Summerville, Sumter, 20; Temperance, 24; Trial, 7, 8, 10, 11, 20, 24; Yorkville, 6, 7, 9, 10.

## ERRATA.

In February Monthly Report, on page 3, under Climatology for the Month, make second line read "3.0° above normal", instead of "3.0° below normal". On page 5, Trenton, mean temperature 50.7, should be 49.9; Society Hill, mean temperature 48.8, should be 49.4. On page 6, Trenton, mean maximum temperature 61.8, should be 60.2.

In the Annual Summary for 1901, on page 9, at Florence, the precipitation departure for February is given as plus 2.51, it should be minus 2.51.

## FIRST BLOOMS.

The following dates on which first blooms were seen, and the first notes of birds heard, is interesting information:

Beaufort.—2nd, Jessamine in bloom; 9th, pear trees in bloom; 10th, first green peas in bloom; 18th, first "chuck-will" heard. Saluda.—8th, robbins disappeared; 24th, dogwood in bloom. Stateburg.—6th, plum trees in bloom.

## REMARKS BY OBSERVERS.

Allendale.—Another cloudy month, with precipitation excessive. Oats were nearly destroyed by lice. Corn being planted.—R. D. Peebles.

Barksdale.—On account of excessive precipitation, farmers did little farmwork. Wheat and oats look fine.—E. V. Garrett.

Batesburg.—Very little farmwork accomplished on account of rainy weather. A small insect has killed all the oats.—E. J. Hite.

Beaufort.—Mean temperature 5.4°, and precipitation 3.22 inches above normal. Precipitation since January 1st is 16.61 inches, which is 7.25 in excess of the normal for the same period. The season is early, but excessive rains delayed planting. All truck crops are early, but light. Oats promise well.—S. M. Benton.

Bennettsville.—Oats look well; corn was planted; weather favorable for plowing.—Jno. L. McCall.

Blackville.—Mean temperature 5.1°, and precipitation 0.10 inch above normal.—G. D. C. Lange.

Bowman.—There were lunar halos every night from the 6th to the 11th, that were very distinct. The month was remarkable for partly cloudy days.—B. O. Evans.

Clarks Hill.—Only one frost during the month, a light one in low places. One clear day, the others were cloudy or partly cloudy.—Wm. S. Middleton.

Gillisonville.—Month warm and wet, unfavorable for field work. Planting operations backward; no cotton planted. Some corn up, and escaped the heavy frost of 26th with slight damage. Birds necessitating much replanting.—Sam P. Saltus.

Heath Springs.—Temperature and rainfall both above normal. Not much planting accomplished. Small grain is being damaged somewhat by insects. The fruit crop is still safe.—J. A. Weaner.

Liberty.—Continuous rains kept the ground too wet to plow, and but little of that work was done. Fruit trees were badly damaged by the storm of the 29th. Planting of field crops and gardens scarcely begun.—John T. Boggs.

Little Mountain.—March was remarkable for its mild weather, and the absence of high winds.—J. M. Sease, M. D.

Longshore.—Plum trees began blooming on the 8th, peach on the 9th, cherry and apple on the 20th. Wet month and very little farmwork done. Farmwork not as far advanced as last year, and ground still very wet at the close of the month.—W. G. Peterson.

Pinopolis.—Light frosts on several mornings, with minimum thermometer at 44°, but no damage resulted to fruit or gardens.—E. P. Ravenel.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR APRIL, 1903.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

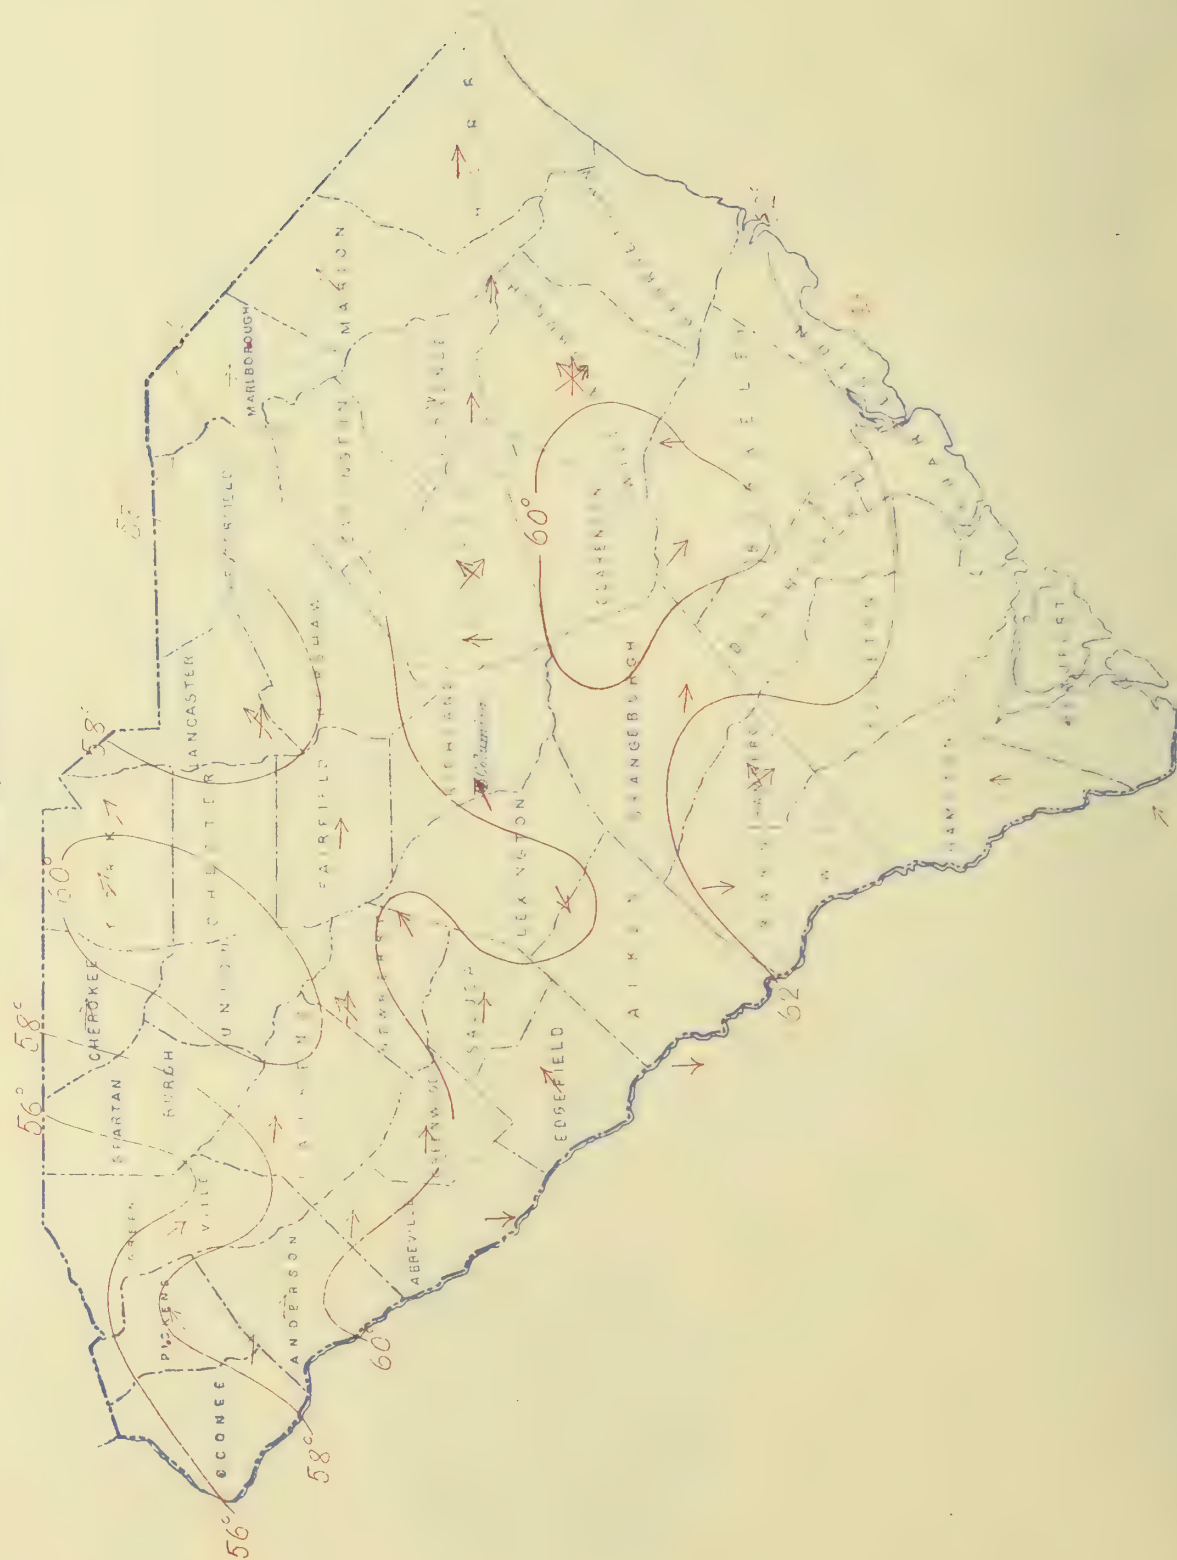

RALEIGH, N. C.:  
WEATHER BUREAU OFFICE.  
1903.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR APRIL, 1907

Arrows fly with the wind

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VI.

COLUMBIA, S. C., APRIL, 1903.

No. 4.

## PROGRESS OF FARMWORK.

The weather conditions that prevailed during the month of April were in direct contrast to those of the preceding month as regards temperature and precipitation. The mean temperature for the two months was the same, that of the month under consideration being about three degrees below the normal while that of March was about three degrees above normal. This abnormal temperature condition greatly retarded the growth of all crops, and more especially so in the western half of the State, where the heavy rains on March 29th and April 8th and 15th caused the ground to become and remain thoroughly soaked. The rainfall in the eastern half of the State being comparatively light during the first half of the month, accompanied by the warmer temperature characteristic of that portion, afforded a more favorable opportunity for growth. Farming operations made very good progress during the greater part of the month in the eastern sections, but were seriously delayed in the western counties during the first two weeks, due to the heavy rains rendering the soil too wet for cultivation. Frosts occurred over a large portion of the State on the 5th, 18th, 23rd and 24th, ranging from light in the central and eastern counties to killing in the northwest portion; with no serious results except to tender vegetation in the latter locality. Hail storms occurred on the 20th, 22nd and 26th, doing little damage to crops except in Marion and adjoining counties where tobacco plants were considerably injured.

Cotton planting was finished during the month in all except the western counties, and many fields in the eastern counties have received their first cultivation, but the continuous cold weather has been very unfavorable for the germination of the seed and growth of the plant, causing the latter to look sickly and, in some instances, to necessitate replanting.

Corn generally came up to stands but owing to the serious destruction by birds and worms, and the poor germination caused by the cool weather, a large acreage was injured to such an extent as to make an entire replanting necessary.

Oats have headed and were ripening in the southeastern counties at the close of the month. The prevalence of lice

and rust will greatly diminish the yield. Wheat is also badly affected by rust.

Tobacco transplanting has been completed in the eastern counties, and is becoming general in the western, but is making very little or no growth during the continued period of unfavorable weather conditions.

Rice remains at a standstill. Truck gardens are doing fairly well, but are much in need of warmer weather.

The fruit prospects continue promising, with the exception of pears which are being seriously affected by blight, a result of the unfavorable weather conditions.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for April, 1903, was  $60.4^{\circ}$ , which is  $1.7^{\circ}$  below normal. The highest local mean was  $63.2^{\circ}$  at Beaufort, the lowest  $55.6^{\circ}$  at Greenville. The highest maximum was  $88^{\circ}$  at Bennettsville and Yorkville on the 29th, and at Seivern on the 30th; the lowest minimum was  $26^{\circ}$  at Clemson College on the 1st, making the State range  $62^{\circ}$ . The greatest local monthly range was  $60^{\circ}$  at Clemson College, the least was  $40^{\circ}$  at Beaufort. The mean of the daily maxima temperatures was  $71.8^{\circ}$ , of the daily minima was  $48.9^{\circ}$ .

Ice.—Ice formation was reported from Cheraw on the 5th, Darlington 4th, and Longshore 5th, 24th. The temperature was cold enough for ice over the western tier of counties on the mornings of the 4th and 5th.

Frosts.—Killing frost was noted as follows: Barksdale, Cheraw, 5, 24; Clemson College, Stateburg, 5; Darlington, 4; Gaffney, Liberty, 24. Heavy frost as follows: Columbia, 5; Gillisonville, 18, 24; Greenville, 24; Little Mountain, 18, 23, 24. Light frosts: Blackville, Little Mountain, Trial, 5; Bowman, Edisto, Effingham, Heath Springs, 5, 24; Clarks Hill, Seivern, 5, 23, 24; Clemson College, 16, 22, 23; Columbia, 18, 24; Conway, 5, 18, 24; Gaffney, 5, 16; Gillisonville, Winthrop College, 24; Greenville, 23; Kingstree, St. Stephen, 5, 16, 24; Longshore, 5, 17, 18, 23; St. Matthews, 16, 23, 24; Saluda, Sumter, 18, 23, 24; Summerville, 4, 17; Yemassee, 16, 24; Yorkville, 5, 23, 24, 25.

## Precipitation, in Inches.

The precipitation averaged 2.95 inches, which is 0.66 below normal. The greatest local amount was 5.55 at Liberty, the least 0.85 at Beaufort. The greatest 24-hourly fall was 3.05 at Liberty on the 13th. The average number of days with rain was 8, ranging from 3 at Beaufort to 13 at Bennettsville.

Excessive Precipitation.—Liberty, 13th, 3.05 in 15 hours; St. Matthew, 25-26th, 2.75 in 10 hours.

Snow.—Greenville, 15, and flurries eastward to Chesterfield county on the same date.

Hail.—Blackville, 25; Cheraw, 12; Conway, Liberty, 20; Florence, 26; Smiths Mills, 21; Temperance, 20, 21; Winthrop College, 14; Yorkville, 17.

Weather.—The average number of clear days was 14, of

\* The mean temperature for March, 1903, was also  $60.4^{\circ}$ .

partly cloudy 9, and of cloudy ones 7.

Winds.—The prevailing direction of the wind was from the west and southwest at 16 stations each, from the northwest at 8, from the south at 6, from the north at 2, and from the northeast at 1 station.

High Winds.—Beaufort, 20, 21, 22; Bowman, 3, 4, 22; Charleston, Little Mountain, Society Hill, 3; Clarks Hill, 13, 14, 15; Columbia, 3, 4, 8, 13, 14, 22; Gillisonville, 4, 14, 15; Heath Springs, 3, 4, 14; Liberty, 14, 15, 30; Longshore, 14, 15; Saluda, Seivern, Sumter, Yorkville, 4; Summerville, 3, 4, 13; Trial, 3, 4, 14, 22, 25, 27.

MISCELLANEOUS PHENOMENA (with dates).

Lunar Eclipse was noted on the evening of the 11th at a number of stations.

Solar Halos.—Charleston, 5, 6, 7, 8, 11, 13, 19, 20, 26, 30; Stateburg, 3.

Lunar Halos.—Allendale, 4, 10; Charleston, 2, 3, 7, 8, 10, 11; Gillisonville, 10; Stateburg, 3, 5.

Fogs.—None reported.

Thunderstorms.—Beaufort, 8, 12, 13, 19, 25; Blackville, 12, 13, 25; Bowman, 8, 12, 20; Cheraw, 12, 13, 20; Clarks Hill, 25; Conway, Sumter, 20; Florence, 26; Gillisonville, 8, 13, 19, 20, 26; Greenville, 19; Heath Springs, 13; Liberty, 3, 8, 13, 20; Little Mountain, 3, 25; Longshore, 3, 8, 13, 25; Seivern, 8, 19; Smiths Mills, 21; Stateburg, 12, 13, 14, 20, 25, 26; Summerville, 8, 12, 13; Temperance, 20, 21; Trenton, 12, 25, 26; Trial, 7, 11, 13, 20; Winthrop College, 13, 14; Yorkville, 8, 13. Summarized, there were 60 storms on 13 dates as follows: 3 on the 3rd; 1 on the 7th; 8 on the 8th; 1 on the 11th; 8 on the 12th; 12 on the 13th; 2 on the 14th; 3 on the 19th; 9 on the 20th; 1 on the 21st; 1 on the 23rd; 7 on the 25th; and 4 on the 26th. Other stations reporting thunderstorms were Charleston, 12, 13, 20, 26; Columbia, 8, 12, 13, 20, 25, 26.

NOTES.

The report from Santuc was received too late to be used in the summary.

The first appearance of migratory birds was noted at the following stations: Longshore, 12th, first whippoor-will; Saluda, 9, first whippoor-will; Society Hill, 19th, first humming bird; Stateburg, 11th, first large brown fly-catcher, 19th, first summer red-bird.

REMARKS BY OBSERVERS.

Allendale.—Partial eclipse of the moon on the evening of the 11th. Corn, cotton and melons up to good stands. The oats crop is almost a failure. Fruit is promising.—R. D. Peeples.

Anderson.—The latter part of this month was favorable for farm work, but corn and cotton planting were not finished, and but little was up by its close.—R. B. Dean.

Batesburg.—Farm work made considerable progress during the month. Some cotton came up, but its growth was checked by the frosts of the 23-24th. Some fields of wheat and oats were so badly damaged that they were plowed up and planted to other crops.—E. J. Hite.

Barksdale.—Farm work was rushed during the last two weeks of April, and cotton planting was finished. Pear trees are almost killed by blight.—E. V. Garrett.

Beaufort.—Cool nights, with dry and windy weather continued throughout the month, so that cotton came up with difficulty. Some early planted cotton was hoed and thinned. Weather favorable for killing grass. Oats generally a failure. Temperature was  $2.7^{\circ}$ , and precipitation 1.35 inches below normal.—S. M. Benton.

Bennettsville.—Cotton planting made rapid progress, and the warm weather at the close of the month caused it to come up well. Corn looks well. Small grain damaged by rust.—Jno. L. McCall.

Blackville.—Monthly mean temperature  $3.8^{\circ}$ , and precipitation 0.69 inch below normal.—G. D. C. Lange.

Bowman.—The low temperatures of the month resulted in poor germination and slow growth of all crops. Peaches are promising. Plums are not a full crop. Pear trees blighting badly. There is a large crop of early figs, and the berry crop will be plentiful.—B. O. Evans.

Gillisonville.—Month dry and cold, and unfavorable for germination. Frost, with damaging effect, occurred on the 18th, 23rd, 24th. Bud worms injured corn, making replanting general. The greater part of the cotton crop was planted but not all of it came up, as seed rotted in the ground. Month closed with gardens and field crops in poor condition.—Sam P. Saltus.

Heath Springs.—Cotton was nearly all planted, but corn planting will continue into May. Small grain improved during the month. Fruit is promising. The month closed with favorable weather.—J. A. Weaner.

Santuc.—The killing frosts of the 5th and 24th were not general, but in low places vegetation was killed; some fruit was killed; gardens escaped owing to their lateness. Winds prevented frost on other dates.—E. W. Jeter.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VI. COLUMBIA, S. C., MAY, 1903. No. 5.

### PROGRESS OF FARMWORK.

The May weather conditions can be divided into two periods, as they affected crops, the first including the first 15 days, the second, the remainder of the month. During the first period the weather was unfavorable on crops of all kinds. The temperature was uniformly low, the soil dry especially over the western and northern portions of the State, and there was a lack of sunshine. There was sufficient precipitation over the southeastern counties for all crops, and crops were damaged by too much rain in Beaufort county. Seed planted late in April germinated poorly in the dry sections, and such crops as were up grew slowly. Much corn and cotton was replanted owing to their unsatisfactory stands.

During the second period there was somewhat more precipitation in the western counties, and temperatures were decidedly higher throughout the State, with a few days of abnormally hot weather at the beginning of the third decade. The heat and moisture stimulated crop growth, and caused replanted fields of corn and cotton to come up to full stands. There were, however, limited areas that were too dry for seed to germinate. Tobacco began to "button" low, showing signs of too early maturity. Corn was undersized to the end of the month, and on bottom lands continued to be damaged by worms. Cotton was small and had irregular stands, but, as a rule, was well rooted and healthy. Fruit prospects remained unimpaired; some early peaches ripened and were marketed. There was a marked improvement in oats toward the close of the month, and a slight improvement in wheat. The former began to ripen, and some was harvested.

Staple crops were backward, or late, but most of the minor crops were as far advanced as usual at this season. Fields were well cultivated, and free from grass and weeds. Notwithstanding the favorable weather near its close, the month was adverse, except on the trucking interests whose shipping season was somewhat longer than usual.

### CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for May, 1903, was 70.7°, which is 0.9° below normal. The highest local mean was

72.9° at Sumter, the lowest 67.0° at Greenville. The highest maximum was 104° at Sumter on the 25th; the lowest minimum was 44° at Heath Springs on the 1st, and Due West on the 2nd, making the State range 60°. The greatest local monthly range was 55° at Georgetown and Heath Springs, the least was 37° at Beaufort. The mean of the daily maximum temperatures was 80.8°, of the daily minimum temperatures 60.6°.

Precipitation, in Inches.

The precipitation averaged 2.69 inches, which is 0.67 below normal. The greatest local amount was 11.97 at Beaufort, the least 0.25 at Liberty. The greatest 24-hourly fall was 5.33 at Beaufort on the 15th. The average number of days with rain was 9, ranging from 1 at Liberty to 16 at Summerville.

Excessive Precipitation.—(2.50 inches or more in 24 hours): Beaufort, 5.20 in 4 hours, 45 minutes.

Hail.—There were two general hail storms, on the 4th and 26th. The one on the 4th was, in places, very severe, and destroyed all vegetation in its pathway. Fortunately the season was early enough to permit replanting of field crops. —(Ed.) Anderson, 3; Beaufort, Cheraw, Conway, Florence, Gillisonville, St. Matthews, 4; Little Mountain, 4, 5, 28; St. Stephens, 5; Spartanburg, 27; Summerville, Trenton, 26.

Weather.—The average number of clear days was 12, of partly cloudy 9, and of cloudy ones 10.

Winds.—The prevailing direction of the wind was from the northeast and east at 16 stations each, from the southeast at 5, from the south at 4, from the southwest at 3, from the west at 2, and from the northwest at 1 station.

High Winds.—Beaufort, Lugoff, 9; Bowman, 8, 9; Charleston, 8, 9, 10; Columbia, Gillisonville, 12; Liberty, 8 to 15 inclusive, Trial, 9, 10.

### MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 6, 12, 13, 14, 23, 25, 28; Cheraw, 4; Stateburg, 12.

Lunar Halos.—Allendale, 3; Charleston, 6, 11, 12, 13; Columbia, 6; Gillisonville, 10, 30, 31.

Dense Fogs.—Gillisonville, 18, 19; Heath Springs, 6; Liberty, 4; Seivern, 5, 6, 30, 31; Society Hill, 29.

Thunderstorms.—Allendale, 3, 22, 26, 27, 29; Beaufort, 3, 4, 7, 21, 25, 26, 27; Blackville, 4, 21, 25, 26, 27, 28; Bowman, Trial, 21, 25, 26; Cheraw, 4, 21, 24, 27, 28; Clarks Hill, 26, 28; Clemson College, 3; Conway, Florence, 4; Darlington, Winnsboro, 23; Gillisonville, 15, 21, 25, 26, 27; Greenville, 26; Liberty, 3, 26, 28, 29, 30, 31; Little Mountain, 4, 5, 28, 29; Longshore, 3, 14, 26, 28; Lugoff, 3, 21, 24, 27, 29; Pinopolis, 5, 25; Santuc, 13, 28; Seivern, 25; Society Hill, 28; Stateburg, 4, 21, 25, 26, 28; Summerville, 4, 6, 26; Sumter, 29; Trenton, 4, 21, 26, 27, 28; Trial, 21, 25, 26; Walterboro, 4, 21, 25, 27; Winthrop College, 23, 27, 28, 29; Yorkville, 23, 28.

Summarized, there were 91 storms on 19 dates, as follows: 6 on the 3rd, 10 on the 4th, 2 on the 5th, 1 on the 6th, 1 on

the 7th, 1 on the 13th, 1 on the 14th, 1 on the 15th, 10 on the 21st, 1 on the 22nd, 4 on the 23rd, 2 on the 24th, 8 on the 25th, 13 on the 26th, 9 on the 27th, 13 on the 28th, 6 on the 29th, 1 on the 30th, and 1 on the 31st. In addition to the above, Charleston reported thunderstorms on the 24th, 25th, 28th; Columbia, 4th, 21st, 24th, 26th, 27th, 28th.

## REMARKS BY OBSERVERS.

Allendale: Month closed warm and favorable for farmwork. Corn, cotton and melons, as well as all minor crops, are promising. Fruit deteriorating.—R. D. Peebles.

Batesburg: The weather has been favorable for all crops. Fruit shipments began about the middle of the month. The yield of grain crops was better than formerly expected.—E. J. Hite.

Beaufort: Mean temperature  $2.8^{\circ}$  below, precipitation 9.54 above normal. The month, as well as the whole season, has been unfavorable for all crops, in some instances disastrous. Some fields were planted 3 and 4 times. Latter part of the month was more favorable.—S. M. Benton.

Bennettsville: Oats ripened. Weather favored cotton. Corn doing well.—Jno. L. McCall.

Blackville: Mean temperature  $1.5^{\circ}$ , and precipitation 1.37 above normal.—G. D. C. Lange.

Bowman: The month was remarkable for fine weather for farmwork, but unusually cool weather prevailed until after the 15th, when it became abnormally hot, with a maximum of  $99^{\circ}$ .—B. O. Evans.

Darlington: A heavy hail storm on the 4th covered a large portion of the county, and in places destroyed cotton and tobacco. Fortunately the season was early enough to permit replanting.—Hon. E. R. McIver.

Gillisonville: The first half of the month was cold and wet, the last warm and dry, bringing the first genial days of

the season, and caused a general revival of crops. Oats made wonderful improvement. Crops that were plowed up and replanted are in better condition than those not so treated.—Sam P. Saltus.

Heath Springs: Small grain ripened, and harvest began, with yields better than expected. Corn is doing well. Cotton has poor stands. Fruit prospects good, with peaches ripening.—J. A. Weaner.

Liberty: There were sprinkling rains, but none that was beneficial until the 31st. Much corn and cotton failed to come up owing to dryness.—Jno. T. Boggs.

Lugoff: Month unusually cold. Cotton and corn are late, but both improved rapidly after the 15th. The oats harvest was begun; crop poor. The fruit crop is promising.—W. J. Burdell, M. D.

St. Matthew: Heavy hail storm at 2 p. m. of 4th that damaged young crops and gardens very much. It was the largest hail that has ever been seen here; some of the stones were the size of birds eggs.—J. L. Wannamaker.

Santuc: The greater part of the month was too cool for growth of cotton, but weather favorable towards the close. The maximum temperature of  $101^{\circ}$  on the 24th is the highest on record for May.—E. W. Jeter.

Society Hill: The oats crop improved and harvest was begun. Cotton is late, and the plants are small. Corn and tobacco suffered from lack of sunshine and moisture.—Maj. J. J. Lucas.

Stateburg: Crops improved rapidly during the hot spell from 15th to 27th, and cultivation made rapid progress owing to the absence of rain. Refreshing showers near the close aided the rapid and vigorous growth of all crops.—W. W. Anderson, M. D.

Summerville: Thunderstorms on 4th and 26th brought hail; stones gathered from the latter measured  $1\frac{1}{2}$  inches long, 1 inch wide and  $\frac{1}{4}$  inch thick; some were longer, others thicker than these.—Miss L. R. Gadsden.

Trenton: Severe hail storm on the 4th damaged fruit, and all field crops in its path had to be replanted. Another hail storm on 26th did damage in this vicinity. Precipitation 0.44 below normal, and 4.60 more than the average for the first five months of the year.—C. A. Long.

Yorkville: Abnormally dry month. Unfavorable for field crops and gardens.—J. R. Schorb.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JUNE, 1880.

Isobars and the Wind.

U. S. DEPARTMENT OF AGRICULTURE.

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VI. COLUMBIA, S. C., JUNE, 1903. No. 6.

PROGRESS OF FARMWORK.

The mean temperature was 3.7° below normal, a wide departure for a summer month. It was the coolest June on record at a number of stations. Light frost occurred on the 12th and 13th at a few places in the western counties. The precipitation was largely in excess of the normal, over all but the western part, and the excess amounted to over 12 inches in places in the east central counties.

Cool nights and excessive precipitation were inimical to crops, especially toward cotton that developed slowly and unfavorably, and failed to attain its usual growth for the season. Field crops could not be properly cultivated. Floods and erosive rains destroyed bottom land crops and hillsides, in places washing away the banks of terraced lands, but bottom lands were largely replanted to corn. Unusually severe hailstorms destroyed crops over extensive areas, necessitating much replanting. Tobacco suffered severely from the hail, but otherwise thrived. Minor crops, truck and pastures were not unfavorably affected, except melons that are later than usual. Frequent rains caused much rotting of grapes and peaches. The rains interfered with wheat and oat harvest, and damaged grain in the shock to some extent. Weather conditions became more favorable by the close of the month.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for June, 1903, was 74.2°, which is 3.7° below normal. The highest local mean was 76.8° at Allendale and Beaufort, the lowest 68.2° at Greenville. The highest maximum was 96° at Batesburg on the 21st, and at Liberty on the 30th; the lowest minimum was 42° at Clemson College on the 13th, making the State range 54°. The greatest local monthly range was 52° at Clemson College, the least was 31° Charleston. The mean of the daily maximum temperatures was 84.1°, of the daily minimum temperatures 64.2°.

Frosts.—Light frost occurred at Anderson on the 12th, and at Longshore on the 13th.

Precipitation, in Inches.

The precipitation averaged 8.09 inches, which is 3.23 above normal. The greatest local amount was 18.42 at Stateburg, the least 3.95 at Due West. The greatest 24-hourly fall was 5.05 at Spartanburg on the 6th. The average number of days with rain was 14, ranging from 8 at Due West to 22 at Summerville.

Excessive Precipitation.—Barksdale, 5th, 2.75 inches in 24 hrs.; Bowman, 19th, 3.27 in 3 hrs. 15 min.; Camden, 7th, 2.70 in 24 hrs.; Cheraw, 9-10th, 3.17 in 15 hrs.; Columbia, 6th, 3.60 in 24 hrs.; 1st, 2.50 in 4 hrs. 50 min.; 1st 1.00 in 17 min.; 6th, 1.00 in 18 min.; Gaffney, 6th, 3.64 in 24 hrs.; Greenville, 6th, 3.82 in 24 hrs.; Greenwood, 2nd, 2.68 in 15 hrs.; Longshore, 1st, 3.75 in 10 hrs.; 1st, 2.00 in 25 min.; Lugoff, 9th, 2.92 in 4 hrs.; St. Matthews, 2nd, 2.80 in 2 hrs.; 19th, 2.10 in 2 hrs.; Saluda, 5th, 3.43 in 24 hrs.; Seivern, 1st, 5.00 in 24 hrs.; Spartanburg, 6th, 5.05 in 24 hrs.; Stateburg, 11th, 3.38 in 4 hrs. 20 min.; Sumter, 1st, 2.76 in 12 hrs.; 28th, 1.55 in 55 min.; Summerville, 11th, 1.78 in 1 hr.; Temperance, 25-26th, 4.01 in 21 hrs.; Winnsboro, 9th, 3.70 in 2 hrs.; 22nd, 1.65 in 15 min.; Yorkville, 6th, 2.53 in 24 hrs.

Hail.—Allendale, Florence, Kingstree, St. Matthews, 19; Barksdale, Seivern, 1; Blackville, 22; Bowman, 18, 19; Cheraw, 24; Darlington, 18, 20; Effingham, St. Stephens, 18; Gillisonville, 6; Greenwood, 2; Longshore, 1-9; Lugoff, 9; Society Hill, 17; Sumter, Winthrop College, 25; Walhalla, 17, 20.

Weather.—The average number of clear days was 11, of partly cloudy 10, and of cloudy 9.

Winds.—The prevailing direction of the wind was from the southwest at 25 stations, from the west at 10, from the south at 7, from the northeast at 4, from the east and northwest at 2 each, and from the southeast at 1.

High Winds.—Beaufort, 7-24; Blackville, 19; Charleston, 18; Columbia, 26; Gillisonville, 24-26; Liberty, 25; Lugoff, 9; Trial, 22.

MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 1, 2, 3, 4, 13, 29; Gillisonville, 21; Stateburg, 20.

Lunar Halos.—Charleston, 3, 13, 14, 29; Gillisonville, 2, 6, 7; Little Mountain, 14.

Fogs, Dense.—Barksdale, 25; Blackville, Society Hill, 10; Liberty, 23, 26, 28, 29; Trenton, 29.

Thunderstorms.—Allendale, 2, 4, 7, 10, 19, 21; Barksdale, 1, 5; Beaufort, 1, 2, 4, 5, 6, 7, 8, 9, 11, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29; Blackville, 1, 2, 4, 6, 11, 18, 19, 21, 22, 25, 26, 27, 28; Bowman, 2, 11, 18, 19, 20, 22, 23, 26; Cheraw, 1, 6, 9, 17, 19, 20, 21, 22, 24, 25, 26; Darlington, 18, 20; Effingham, St. Stephens, 18; Florence, 17, 18, 26; Gillisonville, 1, 3, 6, 7, 8, 9, 10, 11, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 29; Greenwood, 2; Heath Springs, 9, 22; Kingstree, 2, 3, 5, 6, 7, 8, 10, 12, 19, 23, 26, 27, 29; Liberty, 1, 9, 10, 11, 17, 18, 20, 26, 27, 28; Little Mountain, 1, 4, 22, 25, 26, 27; Longshore, 1, 2, 4, 5, 6, 9, 10, 11; Lugoff, 1, 2, 3, 4, 5, 9, 17; St. Matthews, Yemassee, 19; Saluda, Seivern, 1; Santuc, 2, 4, 6, 8, 10, 19, 22, 25, 28; Society Hill, 9, 17; Stateburg, 1, 2, 6, 7, 9, 10, 11, 17, 18, 19, 20, 21, 22, 26; Summerville, 1, 7, 11, 18, 19, 20, 22, 23, 25, 26, 27, 28; Sumter, 3, 6, 7, 19, 21, 22, 25, 26; Trenton, 1, 2, 4, 5, 6, 9, 10, 11, 18, 19, 20, 22, 25, 26; Trial, 2, 6, 9, 17, 18, 19, 21, 22, 25, 26, 27; Walterboro, 18, 21, 26; Winthrop College, 1, 2, 6, 10, 11, 19, 23, 25; Yorkville, 5, 10.

Summarized, there were 222 thunderstorms on 25 dates, as follows: 1st, 14; 2nd, 13; 3rd, 4; 4th, 8; 5th, 7; 6th, 12; 7th, 7; 8th, 4; 9th, 11; 10th, 10; 11th, 10; 12th, 1; 17th, 9; 18th, 14; 19th, 16; 20th, 9; 21st, 8; 22nd, 13; 23rd, 6; 24th, 3; 25th, 12; 26th, 15; 27th, 8; 28th, 5; 29th, 3.

There were also storms at Charleston, 1, 2, 6, 7, 8, 11, 18, 20, 21, 22, 23, 24, 26, 27, 28; Columbia, 1, 4, 6, 9, 10, 11, 19, 20, 21, 22, 25.

#### REMARKS BY OBSERVERS.

Anderson.—The nights were too cool for cotton, and other crops grew poorly.—R. B. Dean.

Barksdale.—Cotton did not thrive on account of too much rain, but toward the close of the month it improved. Corn and melons look fine at the close of the month.—E. V. Garrett.

Batesburg.—There was too much rain for cotton, but it looked promising and was blooming by the close of the month. Corn did well.—E. J. Hite.

Beaufort.—Mean temperature was 3.6° below normal, precipitation 1.81 above. Total precipitation since January 1st is 36.32, an excess of 17.25 over the normal. Cotton is beginning to bloom, but is uneven and generally poor, as are other crops.—S. M. Benton.

Bennettsville.—Cotton grew nicely, and is in good condition, but about 10 days late. Corn is very good.—Jno. L. McCall.

Blackville.—Monthly mean temperature 4.5° below normal; precipitation 2.59 above.—G. D. C. Lange.

Bowman.—There were a few days, early in the month, be-

fore the heavy rains set in, that had a hazy or smoky appearance. The month was unusually wet, and crops suffered from excessive moisture. There was some damage by hail.—B. O. Evans.

Darlington.—Cotton improved during the last few days of dry weather, but no blooms appeared, which makes the crop ten days late. Corn looks fairly well, but is backward. Tobacco, where not injured by wind and hail, is fine.—E. R. McIver.

Gillisonville.—Month pleasant and wet. All crops made great improvement. Corn in silk, with encouraging prospect. Cotton is small, but healthy and growing, and is putting on forms and blooming freely.—Sam P. Saltus.

Greenwood.—A severe hailstorm on the 2nd that killed all cotton and necessitated replanting over a section five miles wide and thirty miles long.—M. M. Calhoun.

Heath Springs.—Both lands and crops were damaged by the heavy rains, and it seems impossible to make full crops, although gardens and pastures are fine.—J. A. Weaner.

Kingstree.—Hail as large as a tea-cup fell on the 19th, that destroyed vegetation, and ruined corn, cotton, tobacco and gardens, in short, all crops in its path. At Lanes, ten miles south, shingles were torn from roofs, and chickens were killed, and some branches were torn and broken from trees.—W. H. Edwards.

Liberty.—Cotton chopping is just finishing. Stands of cotton are dying where worked too soon after it came up. Old cotton started to grow rapidly at the close of the month. Corn is poor.—Jno. T. Boggs.

Little Mountain.—Smoky on the 13th and 20th.—Jno. M. Sease, M. D.

Longshore.—From the 10th to the close of the month the atmosphere was smoky. The smoke would come in drifts, then lift, and again appear. The sky had the appearance of the fall season.—W. G. Peterson.

Lugoff.—The rainfall on the 9th (2.92) fell in about 4 hours. Crops are very poor, owing to an excess of rain, but improved by the close of the month.—W. J. Burdell, M. D.

St. Stephens.—Severe hailstorm in vicinity, on the 18th, that damaged crops seriously.—C. T. Shuler.

Santuc.—There were many storms, but none with high winds. Dense smoke and haze were noted on the 18th and 19th, and on several other days thin blue smoke was observed as from spring clearing fires.—E. W. Jeter.

Society Hill.—Excessive precipitation damaging to all crops. The outlook very unpromising.—Maj. J. J. Lucas.

CLIMATOLOGICAL DATA FOR THE MONTH OF JUNE, 1903.

STATIONS.	Counties.	Elevation, feet.	Length of record, years.	Temperature, in degrees Fahrenheit.							Precipitation, in inches.					Sky.					Observer.
				Mean.	Departure from the normal.	Highest.	Date.	Lowest.	Date.	Greatest daily range.	Total.	Departure from the normal.	Greatest in 24 hours.	Total, snowfall included.	Number rainy days.	Number of cool days.	Number partly cloudy days.	Number cloudy days.	Prevalence of wind.

## NOTES.

The first cotton bloom was noted at Barksdale on the 5th. The first katy-did was heard at Saluda on the 4th.

The month was characterized by an unusual uniformity of mean temperature over the entire State.

On September 1st, the Central Office will be moved from the City Hall to the new Loan and Exchange Bank building, with the quarters on the eleventh floor, about 130 feet from the ground, while the instruments on the roof will be about 150 feet above the ground.

Erratum.—June, 1903, monthly report, on pages 5 and 8, the total precipitation at Edisto, 10.77; should be 12.77.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for July, 1903, was 80.4°, which is 0.3° above normal. The highest local mean was 82.3° at Greenwood; the lowest 76.2° at Greenville. The highest maximum was 103° at Florence and Gaffney on the 27th; the lowest minimum was 45° at Walhalla on the 16th, making the monthly range 58°. The greatest local monthly range was 51° at Walhalla, the least was 25° Charleston. The mean of the daily maximum temperatures was 90.7°, of the daily minimum temperatures 70.0°.

## Precipitation, in Inches.

The precipitation averaged 3.59 inches, which is 1.99 below normal. The greatest local monthly amount was 8.54 at Gillisonville, the least 0.95 at Winthrop College. The greatest 24-hourly fall was 3.47 at Gillisonville on the 9th. The average number of days with rain was 8, ranging from 4 at Cheraw, Clemson College, Greenwood, Winnsboro and Yorkville to 13 at Edisto and Summerville.

Excessive Precipitation.—Allendale, 8-9th, 3.40 in 18 hrs. 20 mins.; Gillisonville, 9th, 3.74 in 9 hrs. 45 mins., 24th, 1.30 in 45 mins.; St. Matthews, 10th, 2.75 in 1 hr.; Smiths Mills, 7th, 2.60 in 24 hrs.

Hail.—Longshore, 22nd.

VOL. VI.

COLUMBIA, S. C., JULY, 1903.

No. 7.

## PROGRESS OF FARMWORK.

The temperature during July never varied widely from the normal, although maxima of 100° or over were recorded at a number of stations during the last decade. The even warmth was favorable on crops during the greater part of the month, but the excessive heat during the last week, in connection with a condition of unusually low relative humidity of the air and general absence of rain, was detrimental to vegetation of every kind, by reason of wilting during the daytime and even on some nights. This damaging condition was most severe on corn in the silking and tasseling stages, and where planted on low-lying and sandy lands that had received excessive precipitation during the preceding June and the early part of July. On such lands corn "fired" and withered to the tops, with the ears shrunk and only partly filled with grain. Cotton suffered, on the above described lands, from shedding and to a slight extent from rust, and gave signs of early maturity, and stopped blooming before it had become fruited with even a moderate crop of bolls.

Young corn on the western counties' bottom lands, and all well cultivated cotton on high lands, and on clayey soils, and on sandy lands that were not leached by excessive precipitation in June, improved steadily throughout the month, although the growth of cotton was checked noticeably during the last decade, but it continued to bloom and fruit satisfactorily, with very little shedding of squares or young bolls.

Tobacco curing progressed favorably as the leaves ripened, and was nearly finished in the eastern districts, but was only well under way in the central ones by the end of the month.

Rice did not make satisfactory growth, and became less promising as the month advanced. Of the minor crops, sweet potatoes became the most promising, and early ones were marketed during the month. The commercial crop of peaches was hurt by the wetness of June and early part of the present month, and rotted largely as it ripened. In parts of the State, other fruits were plentiful. Much hay was saved in prime condition. Preparations were begun for fall and winter truck crops.

Weather.—The average number of clear days was 18, of partly cloudy 9, and of cloudy 4.

Winds.—The prevailing direction of the wind was from the southwest at 27 stations, from the west at 12, from the south at 6, from the southeast and northwest at 2 each, and from the north at 1.

High Winds.—Charleston, 5th; Columbia, Spartanburg, 12th; Greenville, 29th; Lugoff, 22nd, 31st; Trial, 6th, 13th.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Corona.—Lugoff, 4; Santuc, 8, 9.

Lunar Halos.—Beaufort, 28; Charleston, 4, 5, 8, 31; Gillisonville, 4, 5, 7, 8; Little Mountain, 3.

Solar Halos.—Charleston, 8, 12, 17, 18; Gillisonville, 31.

Dense Fog.—Beaufort, 26; Blackville, 29; Liberty, 11; Lugoff, 6; Saluda, 1.

Thunderstorms.—Allendale, 5, 6, 7, 8, 9, 12, 13, 19, 23, 25, 30, 31; Beaufort, 1, 3, 5, 6, 7, 8, 9, 10, 12, 13, 22, 23, 30, 31; Blackville, 2, 5, 6, 11, 12, 19, 30, 31; Bowman, 5, 6, 8, 9, 10, 11, 13, 30, 31; Cheraw, 2, 3, 5, 6, 12, 13, 22; Florence, 5, 7, 28; Greenville, 29; Liberty, 2, 3, 4, 5, 6, 7, 9, 10, 11, 12, 13, 28, 29, 30, 31; Little Mountain, 5, 6, 13, 19, 22; Longshore, 1, 2, 5, 12, 13; Lugoff, 5, 22, 28, 30, 31; Santuc, 5, 12, 13, 19, 30; Society Hill, 2, 5, 6, 13; Spartanburg, 11; Stateburg, 2, 5, 6, 13, 19, 28, 29, 30, 31; Summerville, 5, 6, 9, 31; Sumter, 7, 10, 12, 13, 14, 20, 28, 31; Trenton, 2, 5, 6, 7, 12, 13, 23, 28, 30, 31; Trial, 5; Winthrop College, 5, 30; Yorkville, 5, 6.

Arranged by dates, it is found that 130 thunderstorms were reported, and they occurred on 23 dates, as follows: 1st, 2; 2nd, 7; 3rd, 3; 4th, 1; 5th, 18; 6th, 12; 7th, 6; 8th, 3; 9th, 5; 10th, 4; 11th, 4; 12th, 9; 13th, 12; 14th, 1; 19th, 4; 20th, 1; 22nd, 5; 23rd, 3; 25th, 1; 28th, 6; 29th, 3; 30th, 10; 31st, 10.

In addition to the above, Charleston had thunderstorms on the 5, 6, 9, 11, 12, 13, 18, 21, 22, 23, 31; Columbia, 2, 5, 6, 7, 22, 23, 31.

#### REMARKS BY OBSERVERS.

Allendale.—The month was warm, with favorable weather for farmwork. On low lying lands cotton began to rust, but looks well on higher lands. Corn is a fairly good crop. Minor crops promising.—R. D. Peeples.

Anderson.—The rainfall was not well distributed; some places had sufficient amount and in such places crops are doing well.—R. B. Dean.

Barksdale.—Cotton looks fine, and, if it holds its fruit, will make a full crop. Corn improved in color during the month.—E. V. Garrett.

Batesburg.—The absence of rain during the last half of the month caused cotton to shed and corn to "fire". Sweet potatoes look fine.—E. J. Hite.

Beaufort.—Mean temperature was 1.1° below, and precip-

itation 2.28 inches below normal. Under favorable conditions, corn and cotton improved greatly, but much cotton remains small and very poor, especially on low lands. Corn was practically ripe at the close of the month.—S. M. Benton.

Bennettsville.—Cotton did well throughout the month, but the last ten days of hot weather hurt corn considerably. A large crop of hay indicated. Fruit, except peaches, plentiful.—Jno. A. McCall.

Blackville.—Monthly mean temperature 0.1° above normal, precipitation 3.96 inches below.—G. D. C. Lange.

Bowman.—Excessive rains during first half were followed by two weeks of drought that seriously injured crops, especially cotton, that had to be cultivated extensively to rid it of grass.—B. O. Evans.

Clarks Hill.—First part of month was similar to the preceding June, having been cloudy, rainy and with high relative humidity that caused peaches in commercial orchards to rot badly.—Wm. S. Middleton.

Gillisonville.—The month was disagreeable, and the rains and hot weather had a scalding effect that damaged all crops especially cotton on low lands. Corn suffered severely. At the close of the month, cotton looks sickly and is failing. Corn practically ripe.—Sam P. Saltus.

Heath Springs.—The month's weather was hot and dry, causing crops to burn and pastures to fail. Young corn looks well at close.—J. A. Weaner.

Liberty.—Month dry and hot with plenty of sunshine. Crops grew well until the last 10 days when hot winds caused vegetation to wilt badly. The extent of the damage is not yet apparent. There was need of rain at the close of the month.—Jno. T. Boggs.

Little Mountain.—The month was favorable for clearing all crops of grass, as fields had become foul from the excessive rainfall of June. Nearly all crops were laid by in fine condition.—Jno. M. Sease, M. D.

Lugoff.—The month was very dry. Corn suffered for rain. Much hay was saved. Cotton improved steadily.—W. J. Burdell, M. D.

Santuc.—Month very hot; there were 25 days with maximum temperature from 90° to 100°. The latter half noted for its drying winds of moderate velocity.—E. W. Jeter.

Trenton.—Precipitation 4.42 below normal, and is 1.88 inches more than the average for the first seven months of the year.—C. A. Long.

CLIMATOLOGICAL DATA FOR THE MONTH OF JULY, 1903.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.  
COLUMBIA, S. C.

VOL. VI. COLUMBIA, S. C., August, 1903. No. 8.

PROGRESS OF FARMWORK.

The weather conditions during the first two decades of August were conducive to rapid growth of field crops, but unfavorable for their cultivation, and laying by was not finished until near the close of the month. The temperature was about normal, with small variations from day to day, and the precipitation was copious, especially over the eastern parts of the State, and was not deficient in any part except over small areas in the western counties. The favorable growing weather ended on the 22nd, when a period of extreme heat set in that gave maximum temperatures of from 90° to over 100° each day over the whole State. This heat wave terminated on the 30th. During this time there was practically no precipitation, and the relative humidity was abnormally low, causing the surface soil to dry out rapidly, and vegetation to wilt during the latter part. Relief came on the 31st, in the form of lower temperature and quite general rains, heavy in places, but not in time to avert a general and rapid deterioration of growing crops, although it checked deterioration to some extent.

The early corn ripened during the month, and fodder was gathered from it although the first three weeks were unfavorable for curing fodder. Late corn improved steadily until the hot, dry weather set in when it became less promising.

Cotton made excellent growth, and fruited well during the greater part of the month. There was a too rank growth of weed in places, but generally the stalks attained a medium size. On sandy lands there were indications of early maturity, before the hot weather set in, and some rust has appeared but on clayey soils the plants were healthy, vigorous, very sappy, and covered with squares and young bolls, and more promising than at any previous time during this season. The hot, dry weather stopped growth and caused rust to spread rapidly, and the rust soon infected other than sandy land cotton. The heat and dryness also caused excessive shedding of leaves, squares and young bolls, a process of deterioration that became general by the close of the month, and included all varieties of cotton except sea-island. The first bale was ginned on the 11th, four days later than the

average date of first bale, and some picking was done to the end of the month in the eastern counties, but picking did not become general even in the earliest sections, while no cotton opened in the western counties.

Late tobacco curing was finished. The condition of minor crops continued promising, especially of cane, rice and sweet potatoes. The hay crop was unusually promising over the eastern parts. In the truck districts preparation of lands and planting operations made favorable progress.

Barometer and Wind Table for August, 1903.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for August, 1903, was 80.6°, which is 1.2° above normal. The highest local mean was 82.4° at Allendale; the lowest 75.6° at Greenville. The highest maximum was 105° at Gaffney on the 25th; the lowest minimum was 60° at Seivern on the 22nd, making the State range 45°. The greatest local monthly range was 42° at Seivern, the least was 26° St. Matthews. The mean of the daily maximum temperatures was 90.6°, of the daily minimum temperatures 70.5°.

Precipitation, in Inches.

The precipitation averaged 7.15 inches, which is 1.35 above normal. The greatest local monthly amount was 12.83 at St. Stephens, the least 305 at Clarks Hill. The greatest 24-hourly fall was 6.50 at Heath Springs on the 14th. The average number of days with rain was 12, ranging from 6 at Winnsboro to 21 at Stateburg.

Excessive Precipitation.—Allendale, 13th, 1.65 in 53 mins.; Batesburg, 3rd, 2.70 in 6 hrs. 30 mins.; Beaufort, 19th, 2.69 in 24 hrs.; Bowman, 14th, 2.05 in 1 hr. 20 mins.; Cheraw, 11th, 0.98 in 30 mins.; Heath Springs, 14th, 6.50 in 3 hrs.; Little Mountain, 14th, 2.60 in 12 hrs.; Lugoff, 8th, 2.30 in 2 hrs.; St. Stephens, 14th, 3.72 in 24 hrs.; Saluda, 2nd, 2.60 in 24 hrs.; Society Hill, 15th, 4.30 in 24 hrs.; Temperance, 16th, 2.90 in 24 hrs.; Trenton, 4th, 2.68 in 24 hrs.; Trial, 3rd, 2.25 in 1 hr. 35 mins.; Walhalla, 17th, 3.00 in 3 hrs. 30 mins.; Walterboro, 19th, 2.96 in 18 hrs.; Yemassee, 15th, 4.10 in 20 hrs.

Hail.—Allendale, 13th; Cheraw, 31st; Longshore, 14th.

Weather.—The average number of clear days was 15, of partly cloudy 9, and of cloudy 7.

Winds.—The prevailing direction of the wind was from the west and southwest at 14 stations, from the south at 8, from the north, northeast and southwest at 3 each, and from the east and northwest at 2 each.

High Winds.—Lugoff, 8th; Sumter, 8th.

#### MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 5, 6, 7, 8, 13.

Lunar Halos.—Barksdale, 29; Blackville, 30; Charleston, 4, 5, 6, 7, 8; Little Mountain, 30; Saluda, 6, 28; Sumter, 27.

Dense Fog.—Blackville, 3, 4, 21, 22; Bowman, 4; Charleston, 23, 24; Gaffney, 4, 20, 21; Liberty, 3, 4, 11; Lugoff, 4, 5; Saluda, 4, 5, 17, 21; Society Hill, 4, 22; Stateburg, 4, 22; Trial, 4; Yorkville, 20.

Thunderstorms.—Allendale, 1, 2, 4, 5, 6, 7, 10, 11, 13, 14, 19, 20, 21; Beaufort, 1, 2, 3, 4, 5, 6, 7, 9, 11, 12, 13, 14, 15, 16, 18, 19, 28, 30, 31; Blackville, 1, 2, 3, 4, 5, 8, 11, 12, 13, 14, 15, 16, 17, 31; Bowman, 13, 14, 19, 20, 30, 31; Cheraw, 1, 2, 3, 4, 5, 6, 10, 11, 12, 14, 20, 30, 31; Darlington, 30, 31; Florence, 30; Gillisonville, 1, 2, 3, 4, 5, 6, 7, 9, 11, 12, 13, 14, 15, 16, 19, 21, 30, 31; Greenville, 4; Liberty, 1, 2, 3, 4, 12, 13, 14, 15, 16, 17, 18, 20, 29; Little Mountain, 1, 2, 4, 13, 14, 15; Longshore, 1, 2, 4, 11, 13, 14, 15; Lugoff, 3, 8, 10, 12, 13, 14, 30, 31; Saluda, 1, 2, 4; Santuc, 1, 3, 4, 14, 16, 17, 18; Society Hill, 10, 15, 30; Stateburg, 1, 2, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 29, 30, 31; Summerville, 1, 7, 9, 11, 12, 13, 14, 15, 16, 30, 31; Sumter, 8, 12, 30, 31; Trenton, 4, 9, 10, 11, 13, 17; Trial, 1, 2, 3, 5, 9, 11, 12, 13, 14, 16, 28, 30; Winthrop College, 1, 3, 12, 13, 15, 16, 29, 30; Yorkville, 1, 13, 16, 18, 30, 31.

Arranged by dates, it is found that 197 thunderstorms were reported, and that they occurred on dates as follows: 1st, 15; 2nd, 11; 3rd, 9; 4th, 13; 5th, 7; 6th, 5; 7th, 5; 8th, 4; 9th, 6; 10th, 6; 11th, 10; 12th, 11; 13th, 15; 14th, 14; 15th, 9; 16th, 9; 17th, 4; 18th, 4; 19th, 4; 20th, 4; 21st, 2; 28th, 2; 29th, 3; 30th, 14; 31st, 11.

In addition to the above, Charleston had thunderstorms on 1, 2, 3, 7, 9, 11, 12, 13, 14, 15, 16, 18, 19, 20, 25, 30, 31; Columbia, 1, 2, 3, 4, 5, 7, 8, 10, 11, 13, 14, 29, 31.

#### REMARKS BY OBSERVERS.

Allendale.—First of month was rainy and little farmwork could be done, but it closed dry and hot. New cotton was marketed freely. Corn was promising.—R. D. Peeples.

Anderson.—Cotton began to open at the close of the month. All crops were suffering for rain.—R. B. Dean.

Barksdale.—Cotton has a large weed, but is not well fruited.—E. V. Garrett.

Batesburg.—Almost daily rains up to the 20th, followed by hot and dry weather damaged crops considerably. Old cotton opened rapidly toward the close of the month. Minor crops are promising.—E. J. Hite.

Beaufort.—Mean temperature  $0.2^{\circ}$  above normal, precipitation 0.12 below. Hot and dry weather during the last ten days caused cotton to open rapidly. Fall crops and gardens suffered. Pastures good, and stock in fair condition.—S. M. Benton.

Blackville.—Monthly mean temperature  $1.2^{\circ}$  above normal, precipitation 0.10 below.—G. D. C. Lange.

Bowman.—The heat during the latter part of the month was detrimental to growing crops and caused cotton to shed its fruit badly. Growth continues on some cotton, with promise of a top-crop.—B. C. Evans.

Clarks Hill.—Last part of the month was unusually hot, with a maximum temperature of  $102^{\circ}$  on the 27th, this being the hottest day of the year. Cotton and other vegetation withered under the scorching sun.—Wm. S. Middleton.

Gillisonville.—The month was wet, with hot days and pleasant nights. Cotton failed during the closing week owing to excessive shedding and to rust. Cotton opened rapidly during the last week.—Sam P. Saltus.

Heath Springs.—All crops improved during the month, although high water destroyed some on bottom lands. Some cotton was picked toward the close. There was need of rain at the close of the month.—J. H. Weaner.

Liberty.—The weather was favorable to plant growth during the first 20 days, after which the heat and dryness was parching, and crops were injured.—John T. Boggs.

Summerville.—The night of the 27th was the hottest since records were begun, the minimum temperature having been  $78^{\circ}$ —Miss L. R. Gadsden.

Stateburg.—The weather was generally unfavorable to crops, but varied in its effects according to the nature of the soil, clayey lands having suffered comparatively little. Both the excessive rainfall during the first 20 days and the heat of the following 9 days were damaging to crops on sandy soils. Showers on the 30-31st were very beneficial.—W. W. Anderson, M. D.

Trenton.—Precipitation 1.55 inches less than normal for August, and 0.33 more than the average for the first 8 months of the year. The dry and hot weather during the last week caused cotton to shed and rust badly.—C. A. Long.

ERRATA.—In the July monthly report, on page 5, Anderson mean temperature  $81.0^{\circ}$  should be  $80.6^{\circ}$ ; Barksdale mean temperature  $78.4^{\circ}$  should be  $79.8^{\circ}$ ; Heath Springs mean temperature  $80.3^{\circ}$  should be  $80.4^{\circ}$ ; Santuc mean temperature  $80.1^{\circ}$  should be  $80.2^{\circ}$ ; Seivern mean temperature  $80.6^{\circ}$  should be  $80.7^{\circ}$ . On page 6, Anderson mean maximum  $93.2^{\circ}$  should be  $92.5^{\circ}$ ; Barksdale mean maximum  $90.0^{\circ}$  should be  $90.6^{\circ}$ ; Heath Springs mean maximum  $93.5^{\circ}$  should be  $93.4^{\circ}$ , and mean minimum  $67.2^{\circ}$  should be  $67.3^{\circ}$ ; Santuc mean minimum  $67.3^{\circ}$  should be  $67.4^{\circ}$ ; Seivern mean minimum  $67.0^{\circ}$  should be  $67.1^{\circ}$ ; Sumter mean maximum  $93.5^{\circ}$  should be  $93.8^{\circ}$ , and mean minimum  $70.0^{\circ}$  should be  $69.0^{\circ}$ .

NOTE.—All records are used in determining State or district means, but State and district departures are determined by comparison of current data of only such stations as have ten or more years record.    † Maximum thermometer not standard.    + Minimum thermometer not standard.    § Exposed not standard.  
\* On other dates also.    a indicates 1 day missing, b, 2 days, etc.  
NOTE.—Reports from Stateburg, Bennettsville, Georgetown and Pinopolis received too late to be used in determining the means and departures.

m indicates 1 day missing; b 2 days, etc.

COLUMBIA, S. C.

VOL. VI. COLUMBIA, S. C., SEPTEMBER, 1903.

No. 9.

## PROGRESS OF FARMWORK.

The weather during September was exceeding favorable for harvesting operations, having been generally dry, cool, and with an unusually high percentage of sunshine. The mean temperature was below normal owing to cool nights. These conditions were adverse on growing and maturing crops, and also hindered the progress of preparing the lands for fall seeding, the ground having been too dry to plow, although when, about the middle of the month a general rain occurred, seeding operations were pushed and some oats, rye and barley were sown. The last two are sown for winter and spring pasturage, rather than for their grain.

In the August number of the Monthly Report it was stated that general deterioration of cotton had begun. This continued during the first half of September, and until the fruiting season had ended, which ordinarily is about the 10th or 15th of September, for bolls put on later than those dates seldom reach maturity, owing to the occurrence of frost before the bolls have ripened. The September fruitage, this year, was unusually small. Rust continued to spread, and shedding prevailed until both were checked by the rains of the 15th and 16th, but by that time nearly all cotton on sandy lands was leafless and practically dead. Picking made rapid progress in the eastern counties, under exceptionally fine weather for the work, and kept pace with the opening bolls, although, owing to the dry weather many bolls opened prematurely. Reports are common that the lint is short, due, no doubt, to so much premature opening. In the western counties, where cotton is unusually late, opening of bolls was slow, and picking had made but little progress by the close of the month. The crop as a whole promised poor yields. Blight developed on sea-island cotton, but otherwise this variety looked as promising as usual, and late in the month continued to fruit, or put on a top crop.

Early corn was housed in excellent condition, and the yields were somewhat larger than previously estimated; late corn was permanently injured by the hot weather in August, and is a poor crop. Large quantities of hay were secured in fine condition. The forage crops generally are exceptionally

abundant. Rice harvest was nearly finished, and the grain saved without injury from the weather, but the yields are unsatisfactory. Minor crops suffered for rain, although sweet potatoes are a good crop. Truck planting was somewhat retarded by the dry weather.

Barometer and Wind Table for September, 1903.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for September, 1903, was 72.7°, which is 1.5° below normal. The highest local mean was 75.8° at Beaufort; the lowest 68.3° at Greenville. The highest maximum was 100° at Anderson on the 6th, Clemson College and Gaffney on the 5th and 6th; the lowest minimum was 41° at Seivern on the 29th, making the State range 59°. The greatest local monthly range was 58° at Gaffney, the least was 26° at Charleston. The mean of the daily maximum temperatures was 82.9°, of the daily minimum temperatures 62.5°.

## Precipitation, in Inches.

The precipitation averaged 3.62 inches, which is 0.38 below normal. The greatest local monthly amount was 9.43 at Yemassee, the least 0.60 at Due West. The greatest 24-hourly fall was 5.50 at Gillisonville on the 15th. The average number of days with rain was 5, ranging from 1 at Bennettsville to 10 at Beaufort, Charleston, Walterboro and Yemassee.

Excessive Precipitation.—Allendale, 14th, 2.43 in 14 hrs.; Batesburg, 17th, 2.00 in 17 hrs.; Beaufort, 15th, 3.05 in 24 hrs.; Blackville, 16th, 1.83 in 19 hrs.; Cheraw, 1st, 3.75 in 4 hrs.; Conway, 17th, 2.61 in 14 hrs.; Florence, 2nd, 2.49 in 3 hrs. 30 mins.; Heath Springs, 16th, 2.65 in 23 hrs.; Liberty, 8th, 0.74 in 30 mins.; Lugoff, 16th, 2.20 in 18 hrs.; Stateburg, 16th, 4.60 in 22 hrs. 50 mins.; Walhalla, 9th, 2.55 in 3 hrs.

Hail.—None.

Weather.—The average number of clear days was 17, of partly cloudy 7, and of cloudy 6.

Winds.—The prevailing direction of the wind was from the northeast at 21 stations, from the east at 18, from the north at 6, from the south at 3, from the southeast and west at 2 each, and from the southwest at 1.

High Winds.—Charleston, 12th; Liberty, 17th, 27th; Summerville, 12, 13, 15, 16; Sumter, 16, 17.

## MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 12, 13, 16, 23, 24, 30.

Lunar Halos.—Stateburg, 13.

Dense Fog.—Charleston, 2, 26, 27; Cheraw (1) 1; Clemson College, 28, 29; Edisto, 11, 19; Little Mountain, 8; Lugoff, 30; Seivern, 8; Stateburg, 5; Summerville, 26, 27.

Thunderstorms.—Allendale, 8, 11; Beaufort, 1, 2, 3, 13, 14, 15, 16, 17; Blackville, 1, 13, 16; Bowman, 16, 17; Cheraw (2), 1; Gillisonville, 1, 2, 3, 13, 14, 15, 16, 17, 25; Liberty, 8, 9; Lugoff, 1; Santuc, 8, 16; Stateburg, 1, 16, 17; Summerville, 1, 3, 15, 16; Trenton, 1, 2, 3, 7; Walterboro, 25; Yorkville, 9.

Arranged by dates it is found that 43 thunderstorms were reported, and that they occurred on dates as follows: 1st, 8; 2nd, 3; 3rd, 4; 7th, 1; 8th, 3; 9th, 2; 11th, 1; 13th, 3; 14th, 2; 15th, 3; 16th, 7; 17th, 4; 25th, 2.

In addition to the above, Charleston had thunderstorms on 1, 2, 3, 15, 16, 17; Columbia, 1, 17.

## REMARKS BY OBSERVERS.

Allendale.—Hay nearly all secured, with crop fairly large. An average corn crop was gathered during the month. Cotton was picked rapidly and marketed freely.—R. D. Peeples.

Batesburg.—Weather was very favorable for haying. Cotton opened slowly, and the crop will not be as large as was expected.—E. J. Hite.

Beaufort.—Mean temperature was  $1.5^{\circ}$  below normal; precipitation 0.92 above normal, nearly all of the rainfall occurred in three days, about the middle of the month. The ground was quite dry at its close. Cotton picking made rapid progress, and will be finished early in October, on many fields.—S. M. Benton.

Blackville.—Monthly mean temperature  $1.1^{\circ}$  below, and precipitation 0.01 inch below normal.—G. D. C. Lange.

Bowman.—The weather was unusually fine for making hay, after the 17th, and large quantities were saved in fine condition. Not over half an average cotton crop is indicated for this section.—B. O. Evans.

Gillisonville.—Month dry, with warm days and cool nights. Very favorable for harvesting operations. Cotton continued to fail throughout the month, and there is no prospect for a "top crop." The corn crop is below an average. Large quantities of hay secured in fine condition. Minor crops and gardens were suffering for rain at the close

of the month.—Sam P. Saltus.

Heath Springs.—Fine weather for harvesting all crops. Cotton is not as good as previously indicated. The pea crop is poor. Sweet potatoes are good.—J. A. Weaner.

Liberty.—Late crops are suffering for rain at the close of the month. Cotton shedded its leaves and some fruit; early cotton promises to yield from half to two-thirds of a crop; late cotton is not as good, and will be under half an average crop.—Jno. T. Boggs.

Longshore.—Very dry month. Crops were suffering from drought at its close.—W. G. Peterson.

Santuc.—The latter part of the month was cool for September, and was dry. Lands dried rapidly and retarded fall plowing. It is seldom that the weather remains clear for as long a period as it did during the last half of the month. Fall crops are not doing well.—E. W. Jeter.

Society Hill.—Cotton deteriorated during the month. Yield of corn promises well. No loss from freshet. Peas are late. Pea-vine hay good and abundant. Sweet potatoes fine.—Maj. J. J. Lucas.

Stateburg.—Four-fifths of the month's rainfall fell in one day, the 16th, with some damage to crops from floods and washing. Otherwise the weather conditions were as favorable as could be desired for picking cotton, making hay, and harvesting of other ripening crops, but for late growing crops, gardens and pastures, rain is needed. All migratory summer birds have disappeared, except chimney swallows that never leave until after the first heavy frost. Much of the cotton on sandy soils has wilted, and is dying, and will be picked during October.—W. W. Anderson, M. D.

Summerville.—Thunderstorms on 1st and 16th. High winds and rain on 12th, 13th, 15th and 16th. Dense fog from early morning until 9 a. m. on 26th. 21 days were without rain.—Miss L. R. Gadsden.

Trenton.—Precipitation 0.46 inch less than the normal for September, and 0.13 less than the average for the first nine months of the year. There is a general complaint that cotton and peas are short crops.—C. A. Long.

Errata.—In the August, 1903, Monthly Report, on page 6 the mean maximum temperature at Greenwood  $88.7^{\circ}$ , should be  $89.0^{\circ}$ ; on page 5, the mean temperature at Greenwood  $80.2^{\circ}$ , should be  $80.4^{\circ}$ .

No. 10.

## PROGRESS OF FARMWORK.

The month was favorable for harvesting operations, but was unfavorable for growth of vegetation, and for seeding fall grains. The first half of the month was slightly warmer than usual, and the last half was cooler, while the monthly mean temperature was more than one degree lower than the normal. The first general light frost occurred on the 19th, and covered all but the coast sections of the State. Light to heavy, to killing frosts occurred over the entire State from 25th to 29th, inclusive. This is about one month earlier than the date of the first killing frost in 1902, and about twelve days earlier than the average date of first killing frost. These frosts brought to a close the growing season, except along the immediate coast where the frosts were too light to materially injure vegetation.

The precipitation was slightly below normal. There were three periods of general rains, as follows, from the 6th to 8th, the 16th to 18th, and on the 24th, the latter largely confined to the eastern and northern counties. The most of the month's precipitation occurred on the 16th-17th. There was a decided deficiency over the central and western sections, and an excess at places in the eastern counties.

Farming operations made rapid progress, under exceptionally favorable weather conditions, so that practically all crops ripened and were gathered.

Cotton continued to open freely, and nearly the whole crop that had not been gathered in September was picked. This applies to all but the western counties where there was considerable late cotton. In that section some unopened bolls were destroyed by the frosts. Picking kept pace with the opening, and the lint was secured in fine condition. The yields were disappointing, and were below those for last year, per acre. Frosts injured late sea-island cotton to some extent.

The corn crop was housed, and the yields were uniformly larger than previously indicated. Pea-vine and other hay was gathered in large quantities, and in excellent condition. The sweet potato crop was uniformly good, but other root crops were short. Rice harvest was finished, with favorable weather for the work. Fall seeding made only fair progress,

as the soil was too dry over a large portion of the State for preparation of lands. A considerable acreage of oats was sown, and but very little wheat. Fall truck made excellent growth, and shipments were begun toward the close of the month.

Barometer and Wind Table for October, 1903.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for October, 1903, was 62.0°, which is 1.2° below normal. The highest local mean was 66.5° at Beaufort; the lowest 57.6° at Greenville. The highest maximum was 93° at Anderson on the 2nd, the lowest minimum was 25° at Clemson College on the 25th\*, making the State range 68°. The greatest local monthly range was 67° at Clemson College, the least was 43° at Charleston. The mean of the daily maximum temperatures was 74.3°, of the daily minimum temperatures 49.6°.

Ice.—Thin ice formed at the following places on the dates given: 25th, Blackville, Longshore, Trenton; 27th, Lugoff, Seivern, Summerville; 28th, Bennettsville, Darlington, Gaffney, Gillisonville, Seivern; 29th, Gillisonville.

Frosts.—The first light frost of the season was noted as follows: 18th, Seivern, Trial; 19th, Augusta, Ga., Bennettsville, Bowman, Camden, Charlotte, N. C., Cheraw, Clarks Hill, Clemson College, Conway, Darlington, Effingham, Gaffney, Greenville, Little Mountain, Longshore, Lugoff, St. Stephens, Santuc, Saluda, Smiths Mills, Society Hill, Wilmington, N. C., Winnsboro; 20th, Columbia, Edisto, Gillisonville, Kingstree, St. George, St. Matthews, Yemassee; 25th, Blackville, Stateburg, Yorkville; 26th, Charleston, Savannah, Ga.; 28th, Walterboro. First heavy frost occurred on the 17th, Trial; 25th, Bowman, Camden, Cheraw, Columbia, Conway, Edisto, Effingham, Gaffney, Kingstree, Lugoff, St. George, St. Matthews, St. Stephens, Saluda, Smiths Mills, Winnsboro, Yemassee; 27th, Bennettsville, Charlotte, N. C., Society Hill, Yorkville; 28th, Blackville, Wilmington, N. C. First killing frost occurred on the 24th, Seivern, Walbala; 25th, Anderson, Augusta, Ga., Batesburg, Clarks Hill, Clemson College, Greenville, Greenwood, Liberty, Little Mountain, Longshore, Santuc, Spartanburg, Trenton; 27th, Darlington, Heath Springs, Lugoff, Summerville, Win-

\*NOTE.—A minimum temperature of 23° was recorded at Seivern on the 27th and 28th, but this is believed to be too low for the locality.—Ed.

throp College; 28th, Bennettsville, Bowman, Cheraw, Conway, Edisto, Effingham, Florence, Gaffney, Gillisonville, Kingstree, St. George, St. Matthews, St. Stephens, Saluda, Smiths Mills, Society Hill, Stateburg, Trial, Yemassee, Yorkville; 29th, Beaufort.

**Precipitation, in Inches.**

The precipitation averaged 2.63 inches, which is 0.25 below normal. The greatest local monthly amount was 4.68 at Darlington, the least 0.86 at Calhoun Falls. The greatest 24-hourly fall was 2.50 at Lugoff on the 8th. The average number of days with rain was 5, ranging from 2 at Calhoun Falls, Due West and Winnsboro to 8 at Santuc.

Hail.—Little Mountain, Yorkville on the 23rd.

Weather.—The average number of clear days was 18, of partly cloudy 6, and of cloudy 7.

Winds.—The prevailing direction of the wind was from the north and west at 12 stations each, from the northeast at 11, from the northwest at 6, from the east at 4, from the southwest at 3, and from the southeast and south at 1 station each.

High Winds.—Bowman, Society Hill, 9, 10, 11; Columbia, 8, 9, 10, 17, 23, 24, 26, 27; Gillisonville, 21; Little Mountain, 9, 10; Saluda, 10; Summerville, 8, 9, 10.

**MISCELLANEOUS PHENOMENA (with dates).**

Lunar Coronæ.—Santuc, 5, 29, 30, 31.

Lunar Halos.—Charleston, 1, 12, 27, 30; Gillisonville, 31; Santuc, 7, 10.

Solar Halos.—Charleston, 1, 7, 13, 14, 22, 28, 30; Stateburg, 1, 23.

Fogs, Dense.—Blackville, Summerville, 5; Bowman, 4, 23; Charleston, 21, 23, 28; Clarks Hill, 6, 7; Columbia, 6, 16, 20, 21, 22; Little Mountain, Society Hill, 5, 6, 16; Longshore, 16; Lugoff, 1, 7, 16, 23; Santuc, 16, 22; Seivern, 5, 6, 12, 16; Stateburg, 4, 5, 12, 22; Yorkville, 4, 6, 7, 8, 16, 22, 23.

Thunderstorms.—Allendale, 9; Beaufort, Blackville, Bowman, 24; Cheraw, Liberty, Society Hill, Winthrop College, Yorkville, 23; Gillisonville, 16, 24; Longshore, 6, 15; Stateburg, 8th; Summerville, 2, 5, 24. The total number of thunderstorms reported was 17, and they occurred on the following dates: One on the 2nd, one on the 5th, one on the 6th, one on the 8th, one on the 9th, one on the 15th, one on the 16th, five on the 23rd, and five on the 24th.

In addition to the above, a thunderstorm occurred at Columbia on the 23rd.

**REMARKS BY OBSERVERS.**

Batesburg.—Frost on the morning of the 25th did much damage, killing late cotton and all other tender vegetation.—E. J. Hite.

Beaufort.—Mean temperature was 1.2° below normal; accumulated deficiency since January 1st is 213°. October precipitation is 1.66 inches less than normal; accumulated excess since January 1st is 14.01 inches. The month was favorable for harvesting. Almost all crops are light; sea-island cotton was hurt by frost.—S. M. Benton.

Bennettsville.—Wild geese were observed flying south on the 23rd.—Jno. L. McCall.

Blackville.—Thin ice formed on 28th. Monthly mean temperature 0.9° below normal; precipitation 1.06 below.—G. D. C. Lange.

Bowman.—There was a killing frost on the 28th, which is much earlier than unusual. Farmers continued to cut and cure hay until grass was killed by frost; large quantities cured in fine condition.—B. O. Evans.

Gillisonville.—The month was mainly pleasant; the days were warm, the nights chilly. Killing frost on the 28th and 29th did but little damage, as crops were nearly harvested. Cotton was gathered in good condition, but the yields will not average over two-thirds of an ordinary crop. No crop except hay will yield a full crop. Fall grain seeding delayed by harvesting operations.—Sam P. Saltus.

Heath Springs.—Crops nearly harvested. Cotton is not as good as was expected; corn yields are better; sweet potatoes are good. Large acreage of oats is being seeded.—J. A. Weaner.

Liberty.—Crop conditions changed but little during the month, owing to the dryness. Some oats and other small grains were sown. The potato and turnip crops are short. Hay crop short, but secured in extra fine condition.—Jno. T. Boggs.

Little Mountain.—The month was an ideal one for gathering all fall crops. At the end of the month cotton was all open and picked with a few exceptions. Not much oats were sown owing to lack of moisture.—Jno. M. Sease, M. D.

Longshore.—Fine month for gathering crops; cotton nearly all picked. The cotton crop is very poor.—W. G. Peterson.

Saluda.—On the 25th a flock of robins was observed flying south. On the 29th a flock of wild geese was observed flying south.—Alvin Etheridge.

Santuc.—Wild ducks observed flying east on the 17th. Flight of robins, going south, observed on the 20th.—E. W. Jeter.

Society Hill.—Ideal weather for harvesting cotton and pea vine hay. Killing frost occurred one month earlier than last year. Cotton crop very short, and it is nearly all gathered. Corn and sweet potatoes are good.—Maj. J. J. Lucas.

Stateburg.—Robins flying southward, observed on 24th. The frosty temperature, continuing from the 25th to 29th, inclusive, though not low enough to cause a decided killing frost, effectually checked the further growth of summer vegetation. Potato vines and cotton plants were nipped and scorched, and only such bolls as are sufficiently advanced toward maturity are likely to open.—W. W. Anderson, M. D.

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc.

NOTE. — Minimum temperature 23° at Seavern believed to be too low.

VOL. VI. COLUMBIA, S. C., NOVEMBER, 1903.

No. 11.

## PROGRESS OF FARMWORK.

The first six days of the month, and the middle of the second decade, were warm, and the rest of the month was unusually cold. A moderate cool wave, on the 7th and 8th, caused killing frosts over the State except along the coast, and a severe cold wave, on the 18th and 19th, caused freezing temperatures over the entire State, as well as the first ground freeze of the season in all save the coast sections. The month as a whole ranks among the coldest Novembers of record.

The precipitation averaged 1.40 inches which is 52 per centum of the normal November amount. It was quite evenly distributed. A trace of snowfall was recorded over the central and eastern counties on the 25th, but at Batesburg only was the snowfall sufficient to whiten the ground.

The soil was in fair condition for seeding, although in places it was too dry. Oats seeding made rapid progress and practically all the proposed acreage was planted, but germination was slow owing to the prevailing cold weather, and, in consequence, stands were unusually small at the close of the month. The proposed wheat acreage is smaller than usual, and seeding was not more than half finished, and scarcely any fields had come up to stands. There has been no injury from the Hessian fly this season.

In the western counties there was a considerable fruitage of late cotton bolls, not open, which the frosts and freezing temperatures destroyed. Picking is finished, except that in a few fields there remain a few scattered bolls that are being picked, under the stimulus of the prevailing high price of cotton. In ordinary years this part of the crop would not be considered worth picking, but the whole of this year's crop has been picked unusually close.

Truck was injured by the freezing temperatures. The cold weather was favorable for butchering hogs nearly a month earlier than usual, and thereby effecting a saving of the feeding value for that length of time. Butchering was begun as soon as the first cold wave warning was issued by the Weather Bureau, and before the temperature had fallen to the requisite degree of coldness for saving the meat.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for November, 1903, was 50.9°, which is 3.3° below normal. The highest local mean was 56.8° at Beaufort; the lowest 45.5° at Greenville. The highest maximum was 86° at Bennettsville on the 5th, the lowest minimum was 10° at Clemson College on the 27th, making the State range 76°. The greatest local monthly range was 74° at Clemson College, the least was 46° at Georgetown. The mean of the daily maximum temperatures was 61.5°, of the daily minimum temperatures 40.3°, making the mean daily range 21.2°.

Frosts.—The following is a list of stations that recorded the first killing frost of the season in this month, and this list is supplemental to the one published in the October, 1903, Monthly Report. The dates in this list for Beaufort, Stateburg, Summerville and Yorkville are corrections for the October list. On the 5th at Aiken; on the 7th at Charlotte, N. C., Georgetown, Stateburg, Winnsboro and Yorkville; on the 8th at Blackville, Columbia, Pinopolis and Wilmington, N. C.; on the 19th at Allendale, Beaufort, Charleston, Savannah, Ga., Summerville and Walterboro.

## Precipitation, in Inches.

The precipitation averaged 1.40 inches, which is 1.28 below normal. The greatest local amount was 3.17 at Batesburg, the least was "Trace" at Georgetown. The greatest 24-hour fall was 1.73 at Yemassee on the 4th. The average number of days with 0.01 inch, or more, of rain was 5, ranging from none at Georgetown to 9 at Charleston, Greenville, Summerville and Walterboro.

Hail.—Yorkville on the 5th.

Snow.—A general but very light fall of snow occurred on the 25th. The greatest depth was 0.7 at Batesburg.

Sleet.—Sleet was recorded as follows: Anderson, 20; Barksdale, Bowman, Clarks Hill, Columbia, Clemson College, Liberty, Summerville, Trenton, Winthrop College and Yemassee on the 21st; Batesburg, 22; Bennettsville, Greenville, Little Mountain, 21, 25; Blackville, 21, 26; Camden, Heath Springs, Lugoff, Society Hill, Spartanburg, on the 25th; Darlington, 24; Longshore, 25, 26; Saluda, 7, 25.

Weather.—The average number of clear days was 14, of partly cloudy 8, and of cloudy 8.

Winds.—The prevailing direction of the wind was from the north at 16 stations, from the northeast at 15, from the west at 8, from the southwest at 6, from the east at 4, from the northwest at 3, and from the south at 1 station.

High Winds.—Beaufort, 28; Bowman, 7; Columbia, 6, 18, 19, 21, 26, 27; Charleston, 27; Liberty, 23, 26.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Coronæ.—Blackville, 28; Santuc, 30.

Solar Halos.—Charleston, 4, 8, 11, 16; Columbia, 1, 3; Saluda, Stateburg, 8.

Lunar Halos.—Charleston, 2, 3, 4; Columbia, Little Mountain, Stateburg, 1; Gillisonville, 1, 3, 4; Santuc, 1, 11.

Fogs.—Barksdale, 12, 13; Beaufort, 13; Blackville, Gillisonville, 14th; Bowman, 13, 14, 15; Charleston, 13, 17; Clarks Hill, 5, 11, 13, 14; Columbia, 14, 30; Clemson College 3, 5, 8; Greenville, Longshore, 5; Liberty, 3, 10, 13, 14; Little Mountain, 5, 14; Lugoff, Stateburg, 3; Saluda, 1, 3, 5, 13; Seivern, 13, 14, 15, 22; Society Hill, 4, 15; Summerville, 6, 24; Yorkville, 3, 5.

Thunderstorms.—Aiken, Blackville, Yorkville, 17; Beaufort, Liberty, 4, 17; Blackville, Trenton, 2, 17; Little Mountain, Longshore, Lugoff, Saluda, 2; Gillisonville, 2, 3, 4; Greenville, 4; Summerville, 3; Winthrop College, 15, 16.

The total number of thunderstorms reported was 24, distributed as follows: 8 on the 2nd, 2 on the 3rd, 5 on the 4th, 1 on the 15th, 1 on the 16th, 7 on the 17th.

In addition to the above, thunderstorms occurred at Charleston on the 4th, 17th; at Columbia on the 2nd.

#### REMARKS BY OBSERVERS.

Aiken.—Much colder weather than usual this month. On seven days the minimum temperature was below freezing, and on three others it was 33°.—Dr. C. F. McGahan, M. D.

Barksdale.—There was some snow on the 26th and 27th, but not enough to whiten the ground.—J. T. Garrett.

Batesburg.—The month was dry and cold, but the weather was fine for seeding fall grain. There is some cotton yet to be picked. The yield of sweet potatoes was very good.—E. J. Hite.

Beaufort.—The mean temperature was 2.5° below normal, and the precipitation 0.62 below. The cold and cloudy weather of the month cut off a large part of the late cotton, making the crop a very short one. Sea-island suffered more than upland cotton. Fall truck generally poor.—S. M. Benton.

Blackville.—The monthly mean temperature was 2.6° be-

low normal, and the precipitation 0.43 below.—G. D. C. Lange.

Bowman.—The month was remarkable for the small amount of precipitation, the total having been only 0.74 inch. The very severe cold of the 28th injured rutabagas seriously but did not injure small grains.—B. O. Evans.

Conway.—The slight fall of snow on the 25th melted as it fell.—McQ. Quattelbaum.

Gillisonville.—The month was damp and bleak. The yield of potatoes and cane were fairly good. Oats sowing was rushed, but germination is slow. Grain crops are in a poor condition owing to the unfavorable weather.—Sam P. Saltus.

Heath Springs.—Corn has all been gathered and the yields are fairly good. Some cotton still to pick. Small grains are very backward on account of the cold and dry weather.—J. A. Weaner.

Liberty.—An unusually cold and dry November. Frosts were of frequent occurrence. Much late cotton was destroyed by the freezing weather. Wheat sowing is well advanced. Considerable plowing has been done. Much of the small grain is up to stands.—Jno. T. Boggs.

Longshore.—This was the coldest November on record at this station. It was also very dry after the first week.—W. G. Peterson.

Lugoff.—The month was unusually cold, with a severe cold wave near its close, making it the coldest November in years. Cotton and corn have been all gathered. Oats are being sown, and some are up.—W. J. Burdell, M. D.

Santuc.—Wild geese were observed at a great height, going south, on the 2nd.—E. W. Jeter.

Stateburg.—The weather conditions were quite favorable from the first to the eighteenth, for farmwork and harvesting, but from the latter date to the end of the month the temperatures fell to, or below freezing, every night. During this period not much farmwork was accomplished.—W. W. Anderson, M. D.

Summerville.—Heavy fogs on the 6th and 24th. Plants were killed on the night of the 18th. Sleet fell on the morning of the 21st.—Miss Lela R. Gadsden.

Trenton.—Precipitation 1.29 less than the normal for November, and 2.87 inches less than the average for the first 11 months of the year.—All crops gathered, and fall grain all sowed.—C. A. Long.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc.

NOTE.—Winnboro data received too late to include in the means or to be published on pages 6 and 8.

r Probably too high.

s Probably too low.

### STATIONS.

a indicates 1 day missing, b 2 days, etc.

a indicates 1 day missing, b 2 days, etc.

TOTAL PRECIPITATION FOR NOVEMBER, 1903.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, NOVEMBER, 1903.

VOL. VI. COLUMBIA, S. C., DECEMBER, 1903.

No. 12.

## PROGRESS OF FARMWORK.

December was an unusually cold month. At stations having a record of less than fifteen years, it was the coldest December of record, and since 1871 only on two years was the average temperature lower in South Carolina for the same month, namely in 1872 and in 1876, while 1886 was equally as cold near the coast.

The mean temperature for the State was only 41°, which is one degree below the active growing temperature, while the mean of the minimum temperatures was about two and a half degrees below freezing, having been 29.4°.

There was a great deal of alternate freezing and thawing that was harmful to grain sown on moist lands. Thin ice was of frequent occurrence, and the prevailing clear weather favored heavy frost deposits, but the frosts of themselves did little or no damage as all vegetation was practically dead at the beginning of the month, except along the coast where winter truck made precarious growth. Lettuce and turnips were the only varieties of vegetables that did even fairly well.

The precipitation was generally deficient, with a few widely separated places that had normal, or slightly excessive amounts. A small part of the precipitation was in the form of snow that fell to a depth of about an inch at a few places, but was generally not more than a mere trace, and all of it melted rapidly and did not afford any protection to winter grain. The small amount of precipitation, following a deficiency in rainfall since August, caused all streams to reach unusually low stages.

Wheat and oats seeding made some progress during the month, but neither grain germinated favorably owing to the cold and dryness. Much wheat sown during the month did not come up, as the tender sprouts were killed by freezing before showing above ground. Oats that had come up from earlier sowings was winter-killed to a large extent and is in a poor condition. The condition of wheat is the poorest in appearance in many years, while the unfavorable weather restricted the acreage planted, as December is usually the most favorable month for sowing it. The dry soil rendered winter fallowing difficult, and but little was done. The cold weather was favorable for killing hogs.

Barometer and Wind Table for December, 1903.

## ADMINISTRATIVE.

The Annual Summary for 1903, to be issued shortly, will contain complete data for all except the following stations, namely: Aiken, Barksdale, Due West, Georgetown, Lugoff, Pinopolis, Sumter, Temperance, Walhalla and Walterboro. The rainfall data for Camden and Edisto are also incomplete. These breaks were largely unavoidable, and at six stations were due to changes of location of observers, necessitating their resigning, and at the rest were largely caused by sickness and unavoidable absence from home of the observers. At Walterboro the record is complete since observations were begun in May. For climatological purposes it is essential to have unbroken records.

No stations were discontinued, and no new stations were established. It is probable that the year 1904 will begin with the same list of stations maintained during 1903, although Temperance and Seivern may be discontinued, as the observers at those places have resigned, unless the efforts being made to secure new observers are successful. Longshore will be removed to Newberry. The distance between the two places is about nine miles. Observations will be resumed at Sumter in either January or February. The large percentage of full reports for the year is gratifying, and is evidence of the interest taken in the work by the voluntary observers of the South Carolina Section.

## ERRATA.

October, 1903, Monthly Report, page 5, Pinopolis mean temperature should be 61.9°. November, 1903, Monthly Report, pages 5 and 8, Winthrop College total precipitation 1.23 should be 1.26.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for December, 1903, was 41.0°, which is 5.2° below normal. The highest local mean was 47.0° at Beaufort; the lowest 34.9° at Greenville. The highest maximum was 72° at Bennettsville on the 9th, and at Gillisonville and Walterboro on the 25th; the lowest minimum was 10° at Spartanburg on the 27th, making the State range 62°. The greatest local monthly range was 54° at Bennettsville, the least was 39° at Winnsboro. The mean

of the daily maximum temperatures was  $52.5^{\circ}$ , and of the daily minimum temperatures was  $29.4^{\circ}$ , making the average daily range  $23.1^{\circ}$ .

Frosts, ice and frozen ground were of frequent occurrence in the interior sections and included the coast sections on the 3rd, 7th, 26th and 27th.

**Precipitation, in Inches.**

The precipitation averaged 1.95 inches, which is 0.88 below normal. The greatest local amount was 3.48 at Smiths Mills, the least was 0.57 at Barksdale. The greatest 24-hour fall was 2.00 inches at Smiths Mills on the 25th. The average number of days with 0.01, or more, precipitation was 6, ranging from 2 at Allendale to 10 at Conway.

Excessive Precipitation.—None.

Snow.—Light snow was recorded as follows: Barksdale, Due West, Longshore, Trenton, 9, 10; Batesburg, Clemson College, Gaffney, Saluda, 9; Bowman, Conway, Gillisonville, St. George, St. Matthews, Smiths Mills, Summerville, 2; Columbia, Greenville, Spartanburg, 2, 10; Cheraw, 3, 9; Effingham, 3; Kingstree, 2, 3; Liberty, 2, 9, 10, 19, 20; Little Mountain, 8; Lugoff, 2, 9, 10; Santuc, Society Hill, Winthrop College, Yorkville, 2, 9.

Sleet.—Sleet was recorded as follows: Aiken, Seivern, Spartanburg, 10; Anderson, Barksdale, Santuc, Yorkville, 2; Batesburg, Camden, Longshore, Society Hill, Stateburg, Trenton, 9; Bowman, Gillisonville, Summerville, 2; Clemson College, Walhalla, 19.

Weather.—The average number of clear days was 20, of partly cloudy 5, and of cloudy 6.

Winds.—The prevailing direction of the wind was from the west at 16 stations, from the southwest and north at 8, from the northwest at 6, from the northeast at 5, from the east at 2, and from the south at 1 station.

High Winds.—Beaufort, Walhalla, 20; Bowman, Heath Springs, 10; Columbia, 10, 13, 20, 25, 26; Charleston, 25; Gillisonville, 20, 25; Liberty, 10, 20; Longshore, 10, 20, 26, 27; Summerville, 10, 25, 28, 29.

**MISCELLANEOUS PHENOMENA (with dates).**

Lunar Halos.—Santuc, 8, 17.

Solar Halos.—Charleston, 8, 14; Santuc, 1; Stateburg, 12.

Dense Fogs.—Charleston, 25; Columbia, 4, 5; Conway, 18; Liberty, 13, 25, 26; Summerville, 24, 28, 30.

Thunderstorms.—Aiken, Blackville, Bowman, Seivern, Summerville, 25; being a total of 5 storms on one date.

**REMARKS BY OBSERVERS.**

Aiken.—There were 23 days this month that the minimum was  $32^{\circ}$ , or below. Thunder and lightning were observed on the 25th.—C. F. McGahan, M. D.

Barksdale.—Some small grain was killed by the freezing weather, especially oats that were slow in coming up. A small portion of the oats sown is up.—J. T. Garrett.

Beaufort.—Mean temperature was  $5.3^{\circ}$  below normal, accumulated deficiency for December  $164^{\circ}$ , and for the year 1903,  $449^{\circ}$ . Precipitation for the month 0.36 below normal, and since January 1, 1903, is 13.15 inches below normal. The month was pleasant, although steadily cooler than usual. Lettuce and turnips are doing fairly well.—S. M. Benton.

Bowman.—The month had an even temperature. Small grain is unusually backward, and made little or no growth.—Benj. O. Evans.

Due West.—Light snow fell on the 9th and 10th.—Rev. O. Y. Bonner.

Gillisonville.—The month was raw and very cold. There were 18 mornings with frost and ice, and frozen ground. Five-eighths of the oats sown during the month failed to germinate, and oats sown earlier are in poor condition.—Sam P. Saltus.

Heath Springs.—The weather during the month was dry and cold. The outlook for small grains is gloomy.—J. A. Weaner.

Liberty.—Clear and cold, but fine weather prevailed during the month. Wheat has come up very slowly, especially the late sowings. Turnips and winter vegetables were badly winter-killed. There were several snow-flurries, but only twice did enough fall to whiten the ground.—Jno. T. Boggs.

Little Mountain.—December was too dry for small grain. Late sown wheat came up to poor stands. Much of the oats was frozen.—Jno. M. Sease, M. D.

Longshore.—This was the coldest December on record at this station. Too dry for grain.—W. G. Peterson.

Lugoff.—Oats were badly damaged by the frequent freezing weather, and only a small acreage was sown. The weather was favorable for killing hogs and curing meat.—W. J. Burdell, M. D.

Society Hill.—Oats are backward, but stands are good notwithstanding the severity of the weather, the temperature having averaged  $5.5^{\circ}$  below normal.—Maj. J. J. Lucas.

Stateburg.—The weather conditions were very unfavorable for farm work during the entire month, and the acreage of wheat and oats is probably less than usual, and what was sown is in poorer condition. Some of the November sowing was killed by freezing just after germination had taken place.—W. W. Anderson, M. D.

Summerville.—Snow and sleet fell all day on the 2nd, but the ground was wet and they melted as they touched the earth. Heavy fog prevailed during the mornings of the 24th, 28th and 30th.—Miss L. R. Gadsden.

## CLIMATOLOGICAL DATA FOR THE MONTH OF DECEMBER, 1903.

WEATHER BUREAU OFFICE.  
1904.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JANUARY, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., JANUARY, 1904. No. 1.

## PROGRESS OF FARMWORK.

January, like the three preceding months, was unusually cold, and ranks among the coldest Januaries of record, with the same month in the years 1872, 1886 and 1893, that had equally low or lower temperatures. There were no extremely cold days, or very warm ones, although the temperature ranged above the normal from the 9th to the 11th and again from the 20th to the 23rd. The State minimum of 8° has been exceeded nearly every January for which records are available. It was a steady, persistent low temperature, together with a period of unusually low maximum temperatures during the last four days, that reduced the average temperature 4.5° below the normal for the month. There were frequent ground freezes and frosts, with alternate thawing, but it does not appear that these conditions damaged wheat and oats materially.

The precipitation was deficient over practically the entire State, but the amounts were nearly of equal value in all sections, ranging between 2 and 4 inches, except over three small areas where the amounts were less than 2 inches, and over two areas where they were slightly above 4 inches. Some of the precipitation was in the form of snow and sleet, but only during the last four days, and over the western third of the State, did the snow remain on the ground long enough to afford protection to winter grains. Wheat that was sown in December and failed to germinate, came up to thin stands during the middle of this month, while wheat already up held its condition fairly well but is unusually small. The oats crop was variously affected by the severe weather, having suffered no injury in places, and was nearly ruined in other places. Like wheat, oats are small for the season. The weather was uniformly too cold for growth of grain and truck crops. Some Spring oats were sown.

Some plowing was done preparatory to sowing oats and to planting early corn and cotton, but less than is usual to the month. Other farmwork was practically at a standstill.

Barometer and Wind Table for January, 1904.

| STATIONS.              | BAROMETER. |          |       |         |       | WIND.           |                 |                   |            |       |

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for January, 1904, was 40.2°, which is 4.5° below normal. The highest local mean was 46.2° at Beaufort; the lowest 34.0° at Greenville. The highest maximum was 74° at Yemassee on the 21st, the lowest minimum was 8° at Clemson College on the 5th and at Darlington on the 6th, making the State range 66°. The greatest local monthly range was 64° at Darlington, the least was 44° at Beaufort. The mean of the daily maximum temperatures was 50.5°, and of the daily minimum temperatures was 30.0°, making the average daily range 20.5°.

## Precipitation, in Inches.

The precipitation averaged 2.97 inches, which is 0.59 below normal. The greatest local amount was 4.78 at Summerville, the least was 0.82 at Bennettsville. The greatest 24-hour fall was 2.81 inches at Summerville on the 22th. The average number of days with 0.01, or more, precipitation was 8, ranging from 2 at Bennettsville to 13 at Camden and Summerville.

Excessive Precipitation.—Gillisonville, 22nd, 2.55 in 24 hours; Heath Springs, 22nd, 2.45 in 7 hours; Summerville, 22nd, 2.81 in 24 hours; Yemassee, 22nd, 2.56 in 12 hours.

Snow.—There were three snow storms during January. The first on the 4-5th was heaviest in the eastern parts of the State, particularly over the northeastern counties, with a maximum fall of 3 inches at Conway (Horry Co.) and none in the western counties. The second storm occurred on the 13th and was confined in its area to the extreme northwestern border counties with generally only a trace except on the mountain tops that became white. The third storm occurred on the 28th, continuing intermittently to the 31st. The snow-fall from this storm was heaviest over the northwestern counties where it fell to a depth of from one to over five inches, with a maximum depth of 5.5 inches at Walhalla, (Oconee Co.). In the central and eastern counties the precipitation during this storm was in the form of sleet and rain that froze as it fell, coating outdoor objects with ice from a quarter to a half inch in thickness. The ice melted on the 31st. The snow did not melt during the month.

Sleet.—The southeastern counties had sleet on the 4th. Places in the western counties, in the Wateree and the central Savannah valleys on the 6-7th, while on the 28th sleet fell

over the entire State except the extreme southeastern coast region. The sleet was mixed with snow in the western and with rain in the central and eastern sections.

Weather.—The average number of clear days was 15, of partly cloudy 5, and of cloudy 11.

Winds.—The prevailing direction of the wind was from the north at 12 stations, from the west at 11, from the southwest at 8, from the northeast at 7, from the northwest at 5, from the south at 2, and from the east at 1 station.

High Winds.—Bowman, 22; Columbia, 13, 22, 28; Charleston, 8; Gillisonville, 10, 21, 22; Lugoff, 4; Summerville, 3, 4, 10, 11, 12, 20, 21, 22, 27.

#### MISCELLANEOUS PHENOMENA (with dates).

Coronæ.—Santuc, 1, 2, 23.

Solar Halos.—Charleston, 1, 2, 3, 7, 12, 13, 23; Stateburg, 10, 16, 26.

Lunar Halos.—Beaufort, 3; Charleston, 1, 3, 4, 6, 25, 26; Santuc, 26; Stateburg, 23.

Dense Fogs.—Aiken, 12, 30, 31; Barksdale, Little Mountain, 11, 31; Beaufort, 21; Camden, 14; Charleston, 18, 21; Cheraw, 12, 30, 31; Columbia, 11, 12, 17, 30; Clemson College, 16, 31; Gaffney, 8, 12; Greenville, 12, 31; Liberty, 2, 10, 12, 16, 31; Lugoff, Newberry, Santuc, 17; Saluda, 12, 17; Smiths Mills, 30; Society Hill, 11th; Stateburg, 17, 30, 31; Summerville, 1, 4, 7, 8, 21, 22, 28, 29; Walterboro, 12; Winthrop College, 11, 12; Yorkville, 8, 12, 31.

Thunderstorms.—Aiken, Trial, 11; Beaufort, Bowman, Newberry, Summerville, 10, 22; Cheraw, Clemson College, Little Mountain, Lugoff, Trenton, 22; Gillisonville, 10; Saluda, 16, 22. Summarized by dates, there were 5 on the 10th, 4 on the 11th, 1 on the 16th, 12 on the 22d, making a total of 22 thunderstorms on 4 dates. There were thunderstorms also at Charleston on the 10th, 11th, 22d, 23d, and at Columbia on the 11th, 22nd.

#### REMARKS BY OBSERVERS.

Aiken.—Month remarkably cold, having been  $5.1^{\circ}$  below normal. Ice storm on the 28th, that covered outdoor objects to considerable thickness and remained to the close of the the month.—C. F. McGahan, M. D.

Barksdale.—The month closed with rough weather—rain, snow and ice, that froze on trees, etc., prevailing, that made a beautiful frosting. Grain is small and has poor stands.—J. T. Garrett.

Beaufort.—Mean temperature was  $4.1^{\circ}$  below normal. The accumulated deficiency in temperature since December 1st (seasonal) is  $294.4^{\circ}$ . Precipitation 1.26 in excess of normal. The cold has been persistent, but no very low temperatures were recorded. Oats, turnips and lettuce have been retarded in growth, but not killed.—S. M. Benton.

Bowman.—The month was severely cold, and had few

pleasant days. Small grain was not materially injured. Spring oats are being sown.—B. O. Evans.

Cheraw.—Ice remained on the ground from the 28th to the close of the month, in places having northern exposures.—W. R. Godfrey.

Gillisonville.—The month was cold and wet. Farmwork has started and made fair progress. Laborers scarce.—Sam P. Saltus.

Heath Springs.—Some plowing was done. Small grain is backward. Temperature below normal.—J. A. Weaner.

Liberty.—The cold was persistent, and the ground frozen a large part of the month. But little plowing was done. Wheat appears to be damaged by the continued freezing weather, although late sown seems to be better than that sown early.—Jno. T. Boggs.

Lugoff.—Farmwork made practically no progress. The oats crop is probably ruined by frequent freezes.—W. J. Burdell, M. D.

Newberry.—The month was cold, with little precipitation except on the 22nd. The oats crop was badly damaged. Wheat is backward.—W. G. Peterson.

Santuc.—Wild geese observed going South on the 12th. The precipitation on the 28th consisted of sleet and rain, that froze, causing a thin ice coating on trees, etc. The severe cold has greatly damaged oats.—E. W. Jeter.

Society Hill.—Temperature was  $3.9^{\circ}$  below normal, and adverse to the oats crop, that is not promising. Ploughing for corn and cotton has begun, to a limited extent.—Maj. J. J. Lucas.

Stateburg.—The month was unfavorable for outdoor farm work, and not much was done. Some ploughing has been done on hills and well drained uplands. The temperature averaged below freezing on the last four days.—W. W. Anderson, M. D.

Summerville.—Winds that blew down fences and trees occurred during the month.—Miss Lela R. Gadsden.

#### ERRATA.

The following correction should be made in the December 1903, Monthly Report: Page 5, mean temperatures, Aiken 43.0 should be 42.3; Clemson College, 38.5 should be 38.9; Florence, 40.5 should be 40.4; Little Mountain 41.6 should be 41.8; Pinopolis, 44.5 should be 42.0; Summerville, 43.5 should be 43.6; Yorkville, 43.0 should be 41.0. Page 5, Anderson, date of maximum temperature 12th, should be 13th. Page 6, maximum temperature, Clarks Hill, on the 11th 43 should be 53; Clemson College, maximum temperature on the 4th, 53 should be 59; Florence, minimum temperature on the 27th, 17 should be 19, and on the 30th, 23 should be 32; Little Mountain, maximum temperature on the 10th, 4 should be 46; Yorkville, minimum temperature on the 30th 30 should be 32. Page 6, Clemson College, mean maximum 51.5 should be 52.2; Florence, mean minimum 27.8 should be 27.5; Little Mountain, mean maximum 52.4 should be 52.7; Yorkville, mean minimum 34.5 should be 30.5.

No. 2.

## PROGRESS OF FARMWORK.

The month was colder than usual with night temperatures below freezing over the western parts of the State, most of the time, but it was warm enough nearly every day to thaw the ground. This alternate freezing and thawing was detrimental to winter grains on wet lands. In the central and eastern counties there were few ground freezes, and grains were not injured by "heaving". The temperature was generally too low for grain crops to make any growth, except along the immediate coast where a slight growth made an improvement in the appearance of winter oats and in truck, both of which are in good condition.

The precipitation was slightly below normal, but it was very evenly distributed over the State, and the ground was kept moist by frequent rains, especially from the 6th to the 11th, and from the 19th to the 22nd. Less general rains occurred on the 1st, the 15th and the 27th. A portion of the precipitation was in the form of sleet on the 10-11th and on the 21st, and some snow fell on these days, but not enough for the protection of winter grains as the snow generally melted as it fell.

The soil was kept in fairly good condition for ploughing in the eastern parts of the State, where good progress was made in the preparation of lands for Spring planting, but it was generally too wet over the western parts, where very little ploughing was accomplished, although about the usual area of uplands was prepared for early planting. Some gardening was done, but the temperature was uniformly too low for the favorable germination of seeds.

A large acreage of Spring oats was sown during the month and some fields of oats that were winter-killed were re-sown. Tobacco beds were burnt over and seeded, but less attention was given to this work than during the last few years. Peach and plum trees began to bloom in the extreme southeastern counties by the end of the month. Some peach buds were killed by the sleet and ice of the 11th, but the extent of the damage was apparently slight and limited to early blooming varieties. Fruit trees are backward and buds showed no perceptible swelling in the central and western counties.

Barometer and Wind Table for February, 1904.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for February, 1904, was 45.2°, which is 2.3° below normal. The highest local mean was 50.8° at Beaufort; the lowest 37.6° at Greenville. The highest maximum was 86° at Florence on the 7th, the lowest minimum was 15° at Clemson College on the 2nd, making the State range 71°. The greatest local monthly range was 66° at Clemson College, the least was 48° at Charleston and Winnsboro. The mean of the daily maximum temperatures was 54.7°, of the daily minimum temperatures 35.6°, making the average daily range 19.1°.

## Precipitation, in Inches.

The average precipitation was 3.59 inches, which is 0.91 below normal. The greatest local amount was 5.35 at Walterboro, the least was 1.95 at Allendale. The greatest 24-hour fall was 2.11 inches at Beaufort on the 9th. The average number of days with 0.01, or more, precipitation was 9, ranging from 3 at Allendale and Florence to 13 at Camden, Cheraw (2) and Newberry.

## Excessive Precipitation.—None.

Snow.—The snowfall for the month was light, there having been measureable amounts at only twelve stations, "trace" at twelve other stations, and none at 30 stations. The heaviest fall was 2.3 inches at Little Mountain. The snow fell on two periods, comprising three dates, as follows: on the 1st at nine stations in the middle western counties, from the Savannah river to the North Carolina border, and the area was comprised in a comparatively narrow belt of country; on the 10-11th over the northern part of the State from the mountains to within about forty miles from the coast, the area bending southward in Williamsburg county.

Sleet.—Two sleet storms were noted. The first on the 10-11th covered all but the southernmost parts of the State. This sleet was mixed with rain that froze as it fell forming an ice coating on trees and wires. In places the sleet was heavy enough to cover the ground. Both the sleet and the ice melted quickly on the 11th. The second sleet storm occurred on the 21st and was confined to the southwestern and western parts of the State.

Hail.—Hail was noted on the 8th at Batesburg.

Weather.—The average number of clear days was 12, of

partly cloudy 6, and of cloudy 11.

Winds.—The prevailing direction of the wind was from the northeast at 22 stations, from the west at 8, from the north at 5, from the east and northwest at 4 each, from the southwest at 3, and from the southeast at 1 station.

High Winds.—Bowman, Gillisonville, Spartanburg, Summerville, 1; Charleston, 20, Columbia, 1, 7, 20; Gaffney, Dillon, 7; Lugoff, 8, 20; Stateburg, 3.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Halos.—Beaufort, Blackville, 26; Charleston, 25.

Solar Halos.—Charleston, 3, 5, 13, 14, 15, 18, 19; Stateburg, 11, 18, 20.

Fogs, Dense.—Aiken, Society Hill, 28; Barksdale, 6, 27, 28, 29; Beaufort, 21, 22, 27, 28; Blackville, 21, 22, 29; Charleston, 7, 8, 21, 22, 28, 29; Cheraw, Conway, Effingham, Gillisonville, Little Mountain, Lugoff, St. Stephens, 29; Clemson College, 6, 19, 28; Columbia, 22, 28, 29; Florence, 19, 28; Greenville, 7, 29; Liberty, 6, 7, 19, 22, 27, 29; Newberry, 19, 28; Saluda, 19; Santuc, 27, 28, 29; Spartanburg, 6; Stateburg, 21, 22, 28, 29; Summerville, 22, 23, 25, 28; Yorkville, 24.

Thunderstorms.—Anderson, 6; Barksdale, Bennettsville, Blackville, Camden, Clemson College, Dillon, Due West, Gaffney, Greenville, Liberty, Newberry, Saluda, Santuc, Society Hill, Stateburg, Summerville, Trenton, Yorkville, 7; Batesburg, Bowman, Lugoff, Spartanburg, 8th; Beaufort, 9; Cheraw 7, 27, Gillisonville, 9, 10; Winthrop College, 7, 26. Summarized by dates, there was one on the 6th, twenty on the 7th, four on the 8th, one on the 10th, one on the 26th, and one on the 27th, making a total of thirty thunderstorms with seven dates of occurrence. There was also a thunderstorm noted at Charleston on the 9th and one at Columbia on the 7th.

#### REMARKS BY OBSERVERS.

Aiken: February was cooler than usual, the mean temperature having been 3.2° below normal.—C. F. McGahan.

Barksdale: The month closed with warm, cloudy weather. Small grain looks much better. There has been some Spring oats sown. Heavy winds on the 7th unroofed a house in this vicinity.—J. T. Barksdale.

Batesburg: Very little farmwork done on account of rains and cold weather. Small grain improving very slowly. Some gardening has been done.—E. J. Hite.

Beaufort: Mean temperature was 2.0° below normal. Accumulated deficiency in temperature since December 1st is 328°. Precipitation for February was 1.08 inches in excess of normal, and is 2.34 inches in excess since January 1st. The oats and truck crops look well. Peach and plum trees

were in full bloom on the 29th.—S. M. Benton.

Bowman: About the average amount of Spring plowing has been done. Gardening is very backward, owing to the unseasonable weather. Some white potatoes and cabbages have been planted.—B. O. Evans.

Clarks Hill: Trees were ice coated on the 11th and the 21st. Some peach buds were killed on the 11th. By the 29th peach buds were swollen and were showing the bloom slightly.—Wm. S. Middleton.

Gillisonville: Month cold and damp. Heavy rains stopped work a part of the time. Oats are apparently doing well. Field work as far advanced as usual.—Sam P. Saltus.

Heath Springs: Very little farmwork accomplished. The contemplated cotton acreage is smaller than last year. Small grain is backward.—J. A. Weaner.

Liberty: Rainfall well distributed throughout the month. Very little plowing has been done, and few oats have been sown. Owing to the continuous cold, the fruit buds are backward. Gardening greatly delayed.—Jno. T. Boggs.

Little Mountain: Plowing was begun toward the last of the month. Some oats fields that were winter-killed, were re-sown. An average acreage of cotton is contemplated.—Jno. M. Sease, M. D.

Lugoff: Considerable plowing has been done. Small grain looks very poor.—W. J. Burdell, M. D.

Newberry: It was a very cold month, but some plowing has been done.—W. G. Peterson.

Society Hill: Oats are very backward, owing to the severe winter. It has been the coldest winter since the establishment of the station. Frogs were heard and bats seen on the 7th and 29th.—Maj. J. J. Lucas.

Stateburg: Although without the occurrence of any unusually low temperature, the weather during this month was damp, raw and cold, and very unfavorable for outdoor work: in consequence, the preparation of ground for Spring planting has not made as good progress as usual.—W. W. Anderson, M. D.

Trenton: Precipitation 3.72 inches less than the February average, and 4.96 less than the normal for the first two months of the year.—C. A. Long.

WEATHER BUREAU OFFICE.

APRIL 23, 1904.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR MARCH, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.  
**CLIMATE AND CROP SERVICE**  
OF THE  
**WEATHER BUREAU.**  
CENTRAL OFFICE: WASHINGTON, D. C.  
  
SOUTH CAROLINA SECTION.  
J. W. BAUER, Section Director.  
COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., MARCH, 1904. No. 3.

**PROGRESS OF FARMWORK.**

The temperature during March was variable, but averaged slightly above normal. There was considerable freezing weather in the western portion, while on the coast the lowest point reached was 4° above freezing, with light frosts in this section on the 10th, 16th and 29th, and heavy frost on the 17th. In the western counties the frosts were generally killing ones on those dates, with thin ice on the 10th, 16th and 29th. However, over the western half of the State vegetation was not far enough advanced to be hurt, although in places peaches were more or less damaged. The damage to the commercial peach orchards, in the "ridge" section, was very slight.

The month's precipitation was wholly in the form of rain, that fell at frequent intervals, there having been general rains on the 2nd, 4th, 6th, 7th, 14th, 18th, 21st, and 27th. The rains were heavy in places on the 6th, 7th, 23rd, and 24th. A few localities had excessive precipitation, but as a rule it was slightly deficient, although the soil was kept supplied with sufficient moisture for easy tillage.

Farm work made rapid advance throughout the month in the eastern half, and after the 15th in the western half, especially the preparation of lands for corn, cotton and other staple crops. Planting operations were confined largely to the eastern and central counties where much corn, considerable rice and a little cotton were planted, as well as the usual minor crops and gardens. As a rule, planting operations made normal progress, with the soil in from good to excellent condition except in certain rice districts and in a few western counties where there was an excess of precipitation that delayed plowing and planting.

The cultivation of tobacco is receiving less attention than last year, but the plants in beds are vigorous though small for the season.

The weather was not persistently warm enough for the rapid growth of winter wheat and oats, although these grains made a marked improvement and are in fairly good condition. Spring oats germinated favorably and came up to good stands.

The truck raising districts were favored by the weather, and early vegetables were being marketed by the close of the month.

Pears, plums and early blooming varieties of peaches finished blooming in all but the extreme northwestern counties, where apple and cherry trees only began to bloom during the last decade.

Pastures made slow growth and afforded but scant grazing in the most favored localities, and none in the western portions.

**Barometer and Wind Table for March, 1904.**

**CLIMATOLOGY FOR THE MONTH.**

**Temperature, in Degrees Fahrenheit.**

The mean temperature for March, 1904, was 56.2°, which is 1.6° above normal. The highest local mean was 60.9° at Beaufort; the lowest 49.1° at Greenville. The highest maximum was 87° at Blackwell on the 1st, the lowest minimum was 23° at Greenville and Santuc on the 16th and 17th, making the State range 64°. The greatest local monthly range was 60° at Clemson College and Gaffney, the least was 41° at Charleston and Heath Springs. The mean of the daily maximum temperatures was 69.7°, of the daily minimum temperatures 44.4°, making the average daily range 23.5°.

Frosts.—Frosts were of frequent occurrence, the latest date having been on the 29th. The last killing frost of the month was noted as follows: Anderson, Barksdale, Bennettsville, Bowman, Clarks Hill, Columbia, Due West, Lugoff, Stateburg, Summerville, Trenton, Winnsboro and Winthrop College, 16th; Batesburg, Beaufort, Camden, Cheraw, Conway, Darlington, Dillon, Florence, Effingham, Gillisonville, Kingstree, Newberry, St. Georges, St. Matthews, St. Stephens, Saluda, Santuc, Seivern, Smiths Mills, Trial, Walterboro, and Yemassee 17th; Society Hill, 15th; Clemson College, Gaffney, Liberty, Little Mountain, Spartanburg, Walhalla and Yorkville, 29th; Greenville, 30th.

**Precipitation, in Inches.**

The average precipitation was 3.42 inches, which is 0.41 below normal. The greatest local amount was 5.52 at Walhalla, the least was 1.54 at Charleston. The greatest 24-hour fall was 2.70 inches at Walhalla on the 6th. The average number of days with 0.01, or more, precipitation was 9, ranging from 4 at Calhoun Falls and Winnsboro to 14 at Camden and Cheraw (2).

Excessive Precipitation.—Walhalla, 2.70 in 24 hrs., on 6th. Hail.—Allendale, Camden, Little Mountain, Lugoff, 14th;

Barksdale, Due West, 24; Bowman, Santuc, 14, 23; Darlington, 11; Liberty, 21; Newberry, 13, 23; Walhalla, Winnsboro, 13.

Weather.—The average number of clear days was 13, of partly cloudy 9, and of cloudy 9.

Winds.—The prevailing direction of the wind was from the northeast and west at 12 stations, from the southwest at 8, from the east at 5, from the north and northwest at 4 each, from the south at 3, and from the southeast at 1 station.

High Winds.—Aiken, 10; Bowman, 3, 5, 6, 11, 15; Charleston, 5; Clarks Hill, Heath Springs, Saluda, Seivern, 11, 15; Columbia, 3, 11, 15; Liberty, 14, 15; Little Mountain, Newberry, Stateburg, 15; Lugoff, 4, 7, 11; Santuc, 11.

#### MISCELLANEOUS PHENOMENA (with dates).

Earthquake—Liberty, 13th, 10:30 p. m.

Luna Coronæ.—Blackville, 25.

Solar Halos.—Beaufort, Stateburg, 17; Charleston, 7, 10, 12, 13, 17, 26, 27, 29, 30, 31.

Lunar Halos.—Charleston, 29, 30; Gillisonville, 7, 30; Little Mountain, Santuc, 25; Stateburg, 26, 27, 29.

Dense Fogs.—Beaufort, 19, 21, 23; Blackville, 2, 10, 22; Bowman, Saluda, 22; Charleston, 2, 3, 10, 21, 22, 23, 25; Columbia, Greenville, 3, 22; Gillisonville, 20, 21, 22, 25; Heath Springs, 2; Liberty, 3; Little Mountain, 24; Lugoff, 25; Santuc, 3, 23; Seivern, 2, 21, 22, 23, 24, 25; Society Hill, 23, 25; Stateburg, 2, 22, 23; Summerville, 1, 2, 3, 10, 19, 22; Trial, 21, 24, 25; Yorkville, 3, 23.

Thunderstorms.—Aiken, 24, 26; Allendale, Camden, 14; Anderson, Clarks Hill, Trenton, 24; Barksdale, 14, 21, 23; Beaufort, 1, 3, 6, 11, 14, 21, 23, 26, 31; Blackville, 3, 14, 21, 23; Bowman, 1, 4, 14, 21, 23, 26; Cheraw, 22; Cheraw (2) 3, 13, 23, 26; Darlington, 11; Dillon, 2, 3, 7, 14, 18, 24; Due West, 3, 14, 24; Florence, 2, 3; Gillisonville, 1, 3, 14, 23, 26; Liberty, 1, 2, 11, 14, 21. Little Mountain, 2, 14, 23; Lugoff, 2, 3, 4, 14, 24; Newberry, 1, 2, 3, 13; Saluda, 13, 21, 24; Santuc, 2, 3, 14, 23; Seivern, 3, 4, 14, 21, 24; Society Hill, Trial, 23; Spartanburg, Winnsboro, 13; Stateburg, 3, 7, 14, 23, 26; Summerville, 2, 3, 6, 21, 23, 26; Walhalla, 1, 10, 13, 22; Walterboro, 2, 4, 24, 26; Winthrop College, 6, 7, 13, 14, 23, 24, 27; Yemassee, 1, 3, 23, 26; Yorkville, 14, 23.

Summarized by dates, there were 7 on the 1st, 10 on the 2nd, 13 on the 3rd, 4 on the 4th, 3 on the 6th, 3 on the 7th, 1 on the 10th, 4 on the 11th, 7 on the 13th, 17 on the 14th, 1 on the 18th, 8 on the 21st, 2 on the 22nd, 15 on the 23rd, 11 on the 24th, 9 on the 26th, 1 on the 27th, and 1 on the 31st, making a total of 117 thunderstorms with 18 dates of occurrence. Thunderstorms occurred at Charleston on the 1, 3, 7, 11, 21; at Columbia on the 2, 3, 14, 23, 26.

Errata.—In the January number of the Monthly Report, on page 5, minimum temperature at Due West on 3rd, should be 5th; Trial, maximum temperature on 21st should be 22nd; Liberty, mean temperature 39.6° should be 38.6°. In the February Monthly Report, page 5, Batesburg, minimum

temperature 21°, should be 20°; Dillon, number of days missing "e" should be "f"; Greenwood, mean temperature 40.6° should be 40.8°; Little Mountain, total precipitation, pages 5 and 8, 3.32 should be 3.43; Stateburg, maximum temperature 74° on 24th should be 76° on 7th; Trial, maximum temperature on 24th should be 7th and 24th; Winthrop College, minimum temperature on 2nd should be 2nd and 11th. Page 6, Greenville, mean minimum temperature 25.6° should be 25.7°.

#### REMARKS BY OBSERVERS.

Aiken.—March 10th tulips, hyacinths and spiræa were in full bloom. A warm month without frost.—C. F. McGahan, M. D.

Anderson.—The month was too wet to accomplish much farm work.—R. B. Dean.

Barksdale.—Plowing was practicable on 13 days. Frost on 29th did not kill fruit. Apple trees and nearly all other fruit trees finished blooming.—J. T. Garrett.

Batesburg.—Farm work advanced rapidly. Corn was planted and came up. There was no injury to the fruit crop. Small grains improved.—E. J. Hite.

Beaufort.—Mean temperature was 2.4° above normal; precipitation 0.65 inch below. Some cotton and corn were planted.—S. M. Benton.

Bowman.—The month was favorable for general farm work. A series of thunderstorms occurred on the 23rd, lasting over six hours. The display of lightning was unusual. Fruit is safe. Strawberries began ripening.—B. O. Evans.

Clarks Hill.—Frost and ice on the 4th injured peach blooms, especially on low lands, but the crop was not materially reduced thereby.—Wm. S. Middleton.

Darlington.—A dust-storm occurred on the 15th. Heavy frost on the 16th that apparently did no damage.—Hon. E. R. McIver.

Dillon.—The month was warmer than usual, but with few clear days.—A. E. Rowell.

Gillisonville.—The month was warm and wet, and was favorable for planting corn, and germination, so that it came up to good stands. Some cotton was planted. Oats are very promising.—Sam P. Saltus.

Heath Springs.—The weather was favorable for rapid progress of farm work. Some corn was planted. Farm stock wintered well. The wheat crop is in good condition.—J. A. Weaner.

Liberty.—Peach, some pear, and plum trees in full bloom. Some corn was planted. Wheat growing nicely. Farm work made rapid progress.—Jno. T. Boggs.

CLIMATOLOGICAL DATA FOR THE MONTH OF MARCH, 1904.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., APRIL, 1904.

No. 4.

## PROGRESS OF FARM WORK.

Persistent low temperature, with frosts on the 4th, 5th, 6th, 14th, 21st and 22nd, kept the soil too cold for the favorable germination of corn and cotton, as well as the large number of minor crops that are planted during April. The precipitation was deficient, and the few rains that fell were soon dried by the prevailing windy weather, so that the soil lacked moisture throughout the month, causing severe drought conditions along the coast and in the north-central counties. Ice was noted on 4th, 5th and 22nd.

Farmwork made rapid progress, and planting operations were unusually well advanced by the close of the month. The weather was unfavorable for the growth of such crops that came up, and was particularly adverse on oats, which headed and bloomed during the month, but, owing to the deficiency in precipitation, the straw is short and the heads are small. Wheat seemed to be favored by the cool weather and maintained a healthy color and stood well, but grew slowly indicating short straw at harvest time. Nearly all the corn came up and the earliest was cultivated, but in color it was yellow. Stands were damaged by cut and bud worms, necessitating considerable replanting. Early cotton came up to irregular stands, and few fields attained full stands during the month. The plants were, as a rule, sickly and grew slowly. Rice, also, failed to make satisfactory growth after it came up. Transplanting tobacco was practically finished. The drought diminished the yields of truck in the coast districts. Peaches were injured by the frost and freeze of the 5th, on low lands, while the commercial orchards escaped serious damage. Apples, cherries, plums and strawberries continued promising throughout the month.

The season is about ten days earlier than usual in regard to general farm work, and about the same number of days late in growth and condition of crops.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for April, 1904, was 59.2°, which is 3.2° below normal. The highest local mean was 63.2° at Beaufort; the lowest 53.1° at Greenville. The

highest maximum was 89° at Gillisonville and Sumter on the 16th, and at Walterboro on the 2nd; the lowest minimum was 21° on the 5th at Spartanburg, making the State range 68°. The greatest local monthly range was 62° at Spartanburg, the least was 45° at Allendale and Charleston. The mean of the daily maximum temperatures was 71.7°, of the daily minima 47.3°, making the average daily range 23.8°.

Frosts.—Frosts occurred on the 4th, 5th, 6th, 14th, 17th, 21st and 22nd. The last killing frost of the month occurred on the 4th at Bowman, Winnsboro; on the 5th at Camden, Cheraw, Clemson College, Conway, Dillon, Due West, Effingham, Florence, Gaffney, Gillisonville, Greenville, Heath Springs, Kingstree, Liberty, Lugoff, Newberry, St. George, St. Matthews, St. Stephens, Smiths Mills, Society Hill, Spartanburg; on the 7th at Yorkville; on the 22nd at Little Mountain, Seivern, and Trial.

## Precipitation, in Inches.

The precipitation averaged 1.34 inches, which is 2.30 below normal. The greatest local amount was 2.45 at Liberty, the least was 0.17 at Charleston. The greatest 24-hour fall was 1.13 inches at Gillisonville on the 26th (in 50 minutes). The average number of days with 0.01, or more, precipitation was 6, ranging from 2 at Allendale to 12 at Saluda.

Snow.—Trace of snow fell at Gaffney, Liberty, Newberry, Saluda, Spartanburg and Walhalla on the 20th.

Sleet.—Batesburg, Bennettsville, Clemson College, Due West, Heath Springs, Liberty, Lugoff, Newberry, Saluda, Walhalla and Winnsboro recorded sleet on the 20th; Cheraw, Spartanburg and Winthrop College on the 21st; Society Hill on the 26th.

Hail.—Bennettsville, Cheraw, Liberty, and Society Hill on the 26th; Columbia, Stateburg, 16th; Gillisonville, 13th.

Weather.—The average number of clear days was 14, of partly cloudy 8, and of cloudy 8.

Winds.—The prevailing direction of the wind was from the southwest at 20 stations, from the west at 15, from the north at 5, from the south at 4, from the northwest at 3, from the east at 2, and from the northeast at 1 station.

High Winds.—Barksdale, 4, 24; Beaufort, 25, 26; Bowman, 10, 11, 19, 25; Charleston, Gillisonville, 16; Clarks Hill, 8, 9; Columbia, 4; Heath Springs, 1, 2, 3, 12, 19; Little Mountain, 11; Lugoff, 10, 14; Summerville, 11, 12, 15, 19, 20, 25, 26.

## MISCELLANEOUS PHENOMENA (with dates).

Earthquake.—Slight at Saluda on the 30th.

Luna Coronæ.—At Santuc on the 23rd.

Solar Halos.—Charleston, 6, 12, 20, 22, 24, 25, 26, 30; Santuc, 14, 22; Stateburg, 22, 23.

Lunar Halos.—Blackville, 25; Charleston, 2, 3, 20, 25, 26; Little Mountain, 21, 24, 25; Newberry, 21; Santuc, 21, 24.

Dense Fogs.—Blackville, Heath Springs, Liberty, Seivern, 7; Santuc, 19; Trial, 23.

Thunderstorms.—Aiken, 12; Barksdale, Society Hill, 26; Beaufort, 1, 7, 8, 9, 12, 26; Bowman, 8, 12, 26; Cheraw, 7, 9, 12, 16, 26; Gillisonville, 1, 3, 7, 8, 26; Greenville, 8; Liberty, 8, 15, 26; Little Mountain, 12; Lugoff, Trial, 7, 16; Newberry, 16; Saluda, 1; Stateburg, Summerville, 7, 12, 16, 26; Yorkville, 7, 12, 16, making a total of 44 thunderstorms with 9 days of occurrence, as follows: 3 on the 1st, 1 on the 3rd and 15th, 8 on the 7th and 12th, 5 on the 8th, 2 on the 9th, 7 on the 16th, and 9 on the 26th. Charleston had thunderstorms on the 3, 7, 8, 12, 13, 16, 26th; Columbia on the 7, 16th.

## REMARKS BY OBSERVERS.

Allendale.—Too cold for early vegetables.—C. A. Glover.

Barksdale.—Cold weather retarded germination of seeds, but corn came up to good stands. Grain improved. Soil received thorough preparation before it was planted.—J. T. Garrett.

Batesburg.—Month was favorable for general farmwork, but too dry for crop growth. The frost and ice on the 5th did little damage.—E. J. Hite.

Beaufort.—The mean temperature was  $2.7^{\circ}$  below normal; precipitation 1.37 below. High winds dried the ground rapidly after the few light showers. Truck suffered severely with greatly diminished yields. Very little cotton came up.—S. M. Benton.

Bennettsville.—Corn was cultivated and cultivation of early cotton begun. Hail on 26th did little damage.—Jno. L. McCall.

Bowman.—April was unusually windy and unseasonably cold, with a deficiency in precipitation. Crops are backward. Corn came up to good stands, but cotton is stunted and looks sickly. Wheat and oats became fairly promising.—B. O.

Evans.

Clarks Hill.—The month was remarkably cool, frosty, windy and cloudy, with a deficiency in precipitation. The effect of this weather was slow germination of seed and some damage to fruit.—Wm. S. Middleton.

Darlington.—Heavy frost and some ice on the 5th, but owing to the condition of the atmosphere, only the tenderest vegetation was injured.—Hon. E. R. McIver.

Dillon.—April was cold and dry. Cotton did poorly; tobacco barely lived; corn grew fairly well; oats are small.—A. E. Rowell.

Gillisonville.—Month dry and unpleasant, but favorable for planting operations, with bulk of cotton having been planted; germination slow. Steady low temperature retarded growth, and crops generally have an unhealthy appearance. Corn was cultivated, and some cotton chopped.—Sam P. Saltus.

Liberty.—There were frosts on the 4th, 11th, 13th and 17th. That of the 4th killed garden truck and peaches on lowlands. Planting operations are well advanced. Too cold for cotton to come up. Wheat and oats grew nicely.—Jno. T. Boggs.

Newberry.—“Sundog” on the afternoon of the 24th. Cold and dry month. Farmwork advanced rapidly, but it was too cool for germination of cotton seed.—W. G. Peterson.

Society Hill.—Cotton came up to good stands. Corn and oats became promising. Killing frost on the 5th destroyed most of the peach crop and first crop of figs. Rain on the 26th was very beneficial.—Maj. J. J. Lucas.

Stateburg.—The month was unfavorable to crops, owing to low temperature, much cloudiness and deficiency in precipitation, retarding germination and growth, and necessitating much replanting.—W. W. Anderson, M. D.

Trenton.—Precipitation 3.30 inches below normal, and 10.61 less than the normal for the first four months.—C. A. Long.

Trial.—First whippoorwill heard on the 23rd. It was an unusually windy April.—Etsell Gaillard.

No. 5.

## PROGRESS OF FARM WORK.

The temperature conditions during May, 1904, were noteworthy in this, that the average of the daily maximum, or day temperatures was slightly above the normal, while the average minimum, or night temperature was greatly below normal. The result was an unusually wide daily range in temperature, and the effects on the progress of farm work and on the condition of crops were to retard germination of seeds and check growth of plants. These effects were most noticeable on corn, cotton, tobacco and rice, among the staple crops, all of which were small for the season even to the close of the month. The cool weather seemed to have a favorable effect on wheat and oats, and on fruits, particularly on peaches and apples. There were light frosts on the 15th, 16th and 18th, in a few of the western counties, that did no damage.

Following the scant rainfall of April, the deficiency in precipitation during May resulted in drought conditions over practically the entire State, most severe along the coast and in the central North Carolina border counties. There were frequent showers at most stations, but the amounts of precipitation were so small that what fell dried quickly and did little good. Copious showers occurred during the last three days over the greater portion of the State, that partially relieved the drought. The dry weather was partly the cause of slow germination of late planted cotton and corn, and consequently poor broken and irregular stands on certain soils.

The light rainfall was favorable for thorough cultivation of field crops, and for finishing planting operations.

The growth and development of early planted corn was fairly good, and its condition improved steadily, except that worms continued to destroy stands on low lands. Cultivation was uninterrupted. Some corn began to silk and tassel and was laid by. Corn that was planted late in April and early in May germinated poorly and grew slowly.

Cotton planting was practically finished by the middle of the month, and replanting by the 25th. Germination of late planted and replanted cotton was unsatisfactory on clay and red lands, but on sandy lands it came up to full stands. The plants were small for the season, but after the middle of the

month they became healthy and vigorous. The fields were well cultivated and were free from grass and weeds.

Tobacco suffered somewhat from the drought and cool nights that retarded growth. The same is true of rice. Wheat improved steadily and became promising, and began to ripen during the last decade. The condition of the oat crop was variously affected by the weather, but generally the deficiency in moisture was harmful. Earliest oats ripened during the last decade, and harvesting operations were begun in the southernmost counties. The drought reduced the yields of truck in the coast districts, especially that of white potatoes. Melons are later than usual. The dry and cool weather seemed to favor the development of fruits, especially peaches, which began to ripen after the middle of the month. The quality of the early peaches was excellent, but they were slightly undersized. Apples, cherries and pears continued promising in most places. Pastures and gardens suffered severely from the drought.

Streams and wells became very low during the month; the average depth of the Congaree river at Columbia was 0.9 feet below zero of the gage, which is the lowest stage of the water on record. Other streams were similarly affected.

Barometer and Wind Table for May, 1904.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for May, 1904, was 70.6°, which is 1.4° below normal. The highest local mean was 73.8° at Bennettsville; the lowest 65.0° at Greenville. The highest maximum was 99° at Gaffney on the 25th; the lowest temperature was 38° at Liberty on the 17th, making the State range 61°. The greatest local monthly range was 58° at Clemson College, Liberty and Winnsboro, the least was 38 at Beaufort. The mean of the daily maximum temperatures was 83.7°, of the daily minimum temperatures 57.4°, making the average daily range 26.3°. (This is about 6° higher than the average daily range for May.)

Frosts.—Light frosts were reported from Newberry on the 11th and 16th; from Union county on the 15th and 16th; and from Greenville county on the 18th.

## Precipitation, in Inches.

The precipitation averaged 2.04 inches, which is 1.34 below normal. The greatest local amount was 4.67 at Walhalla, the least was 0.32 at Sumter. The greatest 24-hour fall was

2.25 inches at Walhalla on the 30th. The average number of days with 0.01, or more, precipitation was 7, ranging from 1 at Allendale and Bennettsville to 11 at Newberry and Stateburg.

Hail.—Hail occurred at Barksdale on the 3rd, at Heath Springs and Saluda on the 31st, and at Liberty on the 2nd. Climate and Crop Correspondents reported damaging hail on the 31st, at a number of places in the northeastern counties.

Weather.—The average number of clear days was 18, of partly cloudy ones 8, and of cloudy ones 5.

Winds.—The prevailing direction of the wind was from the south at 12 stations, from the northeast and southwest at 10 each, from the west at 9, from the east at 3, from the southeast at 2, and from the north at 1 station.

High Winds.—High winds occurred at Charleston on the 4th, Clarks Hill on the 18th, at Columbia on the 30th, at Liberty on the 9, 10, 17, 18, 19th, at Little Mountain, Yorkville, 21st, and at Trial on the 10th.

#### MISCELLANEOUS PHENOMENA (with dates).

Parhelia (Sundogs).—Liberty, 9; Seivern, 8.

Lunar Halos.—Charleston, 30; Lugoff, 29.

Luna Coronæ.—Santuc 4, 9, 24, 31.

Solar Halos.—Charleston, 8, 9, 13, 14, 16, 17, 18, 27, 29, 30, 31; Liberty, 5, 6; Santuc, 16.

Fogs, Dense.—Bowman, 7; Cheraw, 5; Liberty, 9; Yorkville, 18.

Thunderstorms.—Barksdale, 2, 3; Batesburg, 30, 31; Beaufort, 2, 14, 18, 28, 30, 31; Blackville, 14, 17, 27, 29, 30, 31; Bowman, 2, 9, 17, 18, 27, 31; Cheraw, 9; Clarks Hill, 1, 9, 31; Darlington, 2, 7, 31; Dillon, 14, 31; Due West, Walhalla, 29, 30, 31; Gillisonville, 2, 3, 7, 14, 31; Greenville, Santuc, 30; Heath Springs, 31; Liberty, 2, 7, 14, 29, 30, 31; Little Mountain, 14, 29, 30; Lugoff, 9, 10, 27, 31; Newberry, 14, 29, 30, 31; Seivern, 8, 9, 10, 15, 19, 30, 31; Society Hill, 9, 31; Stateburg, 2, 7, 9, 10, 14, 17, 18, 19, 21; Summerville, 2, 30, 31; Trenton, 9, 29, 30, 31; Trial, 14, 31; Walterboro, 14; Winthrop College, 8, 14, 15, 17, 29, 30; Yorkville, 14, 30.

There was a total of 97 thunderstorms reported, on 17 dates of occurrence, as follows: 1 on the 1st, 8 on the 2nd, 2 on 3rd, 4 on the 7th, 2 on the 8th, 8 on the 9th, 3 on the 10th, 11 on the 14th, 2 on the 15th, 4 on the 17th, 3 on the 18th, 2 on the 19th, 3 on the 27th, 1 on the 28th, 8 on the 29th, 15 on the 30th, and 20 on the 31st.

In addition to the above, Charleston reported thunderstorms on the 2, 14, 15, 18, 28, 29, 31; Columbia on the 8, 10, 14, 18, 27, 29, 31.

#### REMARKS BY OBSERVERS.

Allendale.—The entire rainfall for the month occurred on the 30th, and crops suffered for want of moisture.—C. A. Glover.

Barksdale.—Crops are in fine condition at the close of the

month.—J. T. Garrett.

Batesburg.—All crops look fine, and prospects are better than for several years. Fruit shipments are heavy.—E. J. Hite.

Beaufort.—The mean temperature was 2.1° below normal; the deficiency in precipitation was 2.01 inches, and the accumulated deficiency for the season is 5.13 inches. This has been the driest May as well as the driest spring since official records have been kept.—S. M. Benton.

Bennettsville.—Cotton and corn suffered for want of rain, until the 31st.—Jno. L. McCall.

Bowman.—Weather unusually favorable. Cotton was all chopped, and corn begun to be laid by. Rainfall insufficient for gardens. Ripe peaches were noted on the 20th. Grain harvest was begun. The oats crop is a good one.—B. O. Evans.

Dillon.—The month had many clear to partly cloudy days, but was cool and dry. Corn did well and by the close of the month cotton and tobacco were doing well.—A. E. Rowell.

Gillisonville.—The diurnal temperature changes were unusually great, the nights too cool and the days were warm, conditions unfavorable for germination and growth. Fields were well cultivated and are clean. The yield of oats varies greatly in different localities.—Sam P. Saltus.

Heath Springs.—Drought prevailed until the 31st when it was broken by copious rainfall. Crops are well cultivated. Small grain harvest begun, and stubble lands being planted to peas.—J. A. Weaner.

Liberty.—Clear, dry and unusually windy May. It was easy to keep field crops clean. Wheat and oats are promising, and began to ripen by the month's close. The fruit crop will be fair.—Jno. T. Boggs.

Lugoff.—The month was dry, but corn and cotton did fairly well. Oats began to ripen and is a poor crop. Cotton chopping was nearly finished.—W. J. Burdell, M. D.

Newberry.—The month was cool and dry. Farm work made rapid progress. Cotton and corn are small but healthy. Cotton has poor stands on red lands.—W. G. Peterson.

Santuc.—The month was very dry, cool and windy, and crops are poor. Seeds germinated poorly, and stands are irregular. Pastures were badly burned.—E. W. Jeter.

Society Hill.—Cotton came up to good stands, although the plants are small owing to the cool weather. Corn and oats promise well. The outlook for peaches and melons is very poor.—Maj. J. J. Lucas.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JUNE, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.  
**CLIMATE AND CROP SERVICE**  
OF THE  
**WEATHER BUREAU.**  
CENTRAL OFFICE: WASHINGTON, D. C.  
  
SOUTH CAROLINA SECTION.  
J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., JUNE, 1904. No. 6.

**PROGRESS OF FARM WORK.**

The growth and development of crops were generally satisfactory during June. The average temperature was below normal, but the departures were small, except from the 13th to the 16th, during which time the nights were abnormally cool, to the detriment of cotton whose growth was checked, while the cool weather caused lice to develop and to infest fields over the whole State. The subsequent weather, to the close of the month, was warm but without any excessive heat, and the lice quickly disappeared without having done any serious injury.

The precipitation was deficient in the Savannah valley counties, in a few western counties, and in the coast counties, and it was excessive in parts of the northeastern counties. The State average was about an inch below normal. There were five showery periods, as follows: on the 1st; on the 7th-8th; on the 10th-11th; on the 19th-22nd; and on the 27th-30th. This would indicate sufficiently frequent rains to keep the soil moist enough for rapid growth, and also with plenty of time between rains for the thorough cultivation of field crops, but, as indicated above, the showers were so light in parts of the State that drought conditions prevailed. Field crops were generally well cultivated and free from grass and weeds.

The weather conditions were favorable on cotton which made moderately rapid growth on sandy lands where the plants are as forward as usual to the season, and where squares formed freely and some blooms appeared; on clay and red lands growth was less rapid and the plants continue small for the season, although they began to fruit during the last decade. The whole cotton crop maintained a healthy color, and the plants were free from insects and disease, and presented a most promising condition.

Early corn deteriorated slightly in the dry parts of the State, but made great improvement where the rainfall was ample. It reached the "silk and tassel" stage of growth, and most of it was laid by clean and well cultivated. May and June plantings became very promising.

Tobacco developed into a fine, promising crop; some of the lower leaves were pulled and cured. There was little damage from worms and only slight damage from hail.

Rice suffered from drought, and lack of fresh water for flooding, but was otherwise quite promising. Wheat and oats harvest, and threshing, were finished during the month, under favorable weather conditions. The yields of wheat were poor in the central counties and excellent in the western ones. The oats yields were variable, making it difficult to characterize the crop as a whole. The commercial peach crop ripened throughout the month. The yields were large and the quality of the fruit unsurpassed in recent years. Water-melons were late in ripening. Truck shipments gradually dwindled as the season advanced. The condition of the many minor crops, gardens and pastures varied as the rainfall was either ample or deficient.

**Barometer and Wind Table for June, 1904.**

**CLIMATOLOGY FOR THE MONTH.**

**Temperature, in Degrees Fahrenheit.**

The mean temperature for June, 1904, was 77.0°, which is 1.3° below normal. The highest local mean was 79.8° at Aiken; the lowest 72.0° at Greenville. The highest maximum temperature was 102° at Blackville on the 4th; the lowest minimum was 48° at Heath Springs on the 14th, and at Santuc and Saluda on the 15th, making the State range 54°. The greatest local monthly range was 51° at Santuc and Seivern, the least was 33° at Charleston. The mean of the daily maximum temperature was 88.7°, and of the daily minimum temperatures was 65.4°, making the average daily range 23.3°.

**Precipitation, in Inches.**

The precipitation averaged 4.06 inches, which is 1.09 below normal. The greatest local amount was 11.17 inches at Effingham, the least was 0.55 at Aiken. The greatest 24 hour fall was 4.00 inches at Bennettsville on the 29th-30th. The average number of days with 0.01, or more, precipitation was 8, ranging from 2 at Aiken to 13 at Trial.

Hail.—Hail occurred at the following stations: Anderson, 28th; Barksdale, Spartanburg, 19th; Blackville, Liberty, 7th; Camden, 18th; Lugoff, 18th-21st.

Excessive Precipitation.—Bennettsville, 15th, 3.00 inches in 24 hrs.; on the 29th-30th, 4.00 inches in 24 hrs.; Blackville, 28th-29th, 2.69 inches in 24 hrs.; Clarks Hill, 29th, 2.03 inches in 1 hr. 30 mins.; Clemson College, 7th, 1.95 inches in 2 hrs.; Effingham, 1st, 3.02 inches in 24 hrs.; Florence, 1st, 2.43 inches in 20 mins.; Lugoff, 10th, 2.53 inches in 50 mins.;

St. Stephens, 29th, 3.50 inches in 1 hr. 30 mins.; Society Hill, 29th, 2.90 inches in 24 hrs.; Yorkville, 29th, 3.49 inches in 24 hrs.

Weather.—The average number of clear days was 18, of partly cloudy ones 7, and of cloudy ones 5.

Winds.—The prevailing direction of the wind was from the southwest at 25 stations, from the south at 13, from the west at 7, and from the north, northeast, east, southeast and northwest at 1 station each.

High Winds.—Barksdale, Yorkville, 12, 13; Bowman, Charleston, Gillisonville, 12; Cheraw, Heath Springs, 28; Columbia, 13; Little Mountain, 12, 13, 14; Newberry, 6; Society Hill, 20.

#### MISCELLANEOUS PHENOMENA (with dates).

Parhelia.—Liberty, 26.

Lunar Corona.—Santuc, 27.

Lunar Halos.—Charleston, 20, 22, 23; Saluda, 26.

Solar Halos.—Charleston, 10, 26, 27, 29; Trial, 12.

Fogs, Dense.—Anderson, Greenwood, Saluda, Columbia, 2; Blackville, Stateburg, 2, 24; Charleston, Kingstree, 18; Liberty, 2, 8; Seivern, 3; Trial, 9, 10, 24; Yemassee, 18, 24; Dillon, 25, 26.

Thunderstorms.—Anderson, Clemson College, Heath Springs, 28th; Barksdale, 6, 7, 18, 19, 27, 28; Beaufort, 1, 5, 7, 8, 9, 10, 12, 19, 21, 22, 23, 24, 27, 29, 30; Bennettsville, 28, 29; Blackville, 1, 7, 20, 21, 28, 30; Bowman, 1, 7, 8, 10, 12, 20, 21, 29, 30; Camden, 10, 18; Cheraw, 3, 7, 8, 10, 11, 12, 20, 28, 29, 30; Clarks Hill, 7, 29; Darlington, 10, 29; Dillon, 10, 20, 30; Due West, 19, 27, 28, 30; Gillisonville, 1, 4, 7, 8, 10, 20, 21, Greenville, 6, 7, 28th; Liberty, 1, 2, 6, 7, 11, 17, 18, 19, 20, 21, 27, 28, 29; Little Mountain, 20, 21, 28; Lugoff, 5, 7, 10, 18, 21, 22, 27, 28, 29; Newberry, 1, 7, 10, 11, 18, 19, 20, 21, 27, 28, 29, 30; Saluda, 1, 7, 28; Santuc, 19, 20; Seivern, 8, 19, 20, 21, 22; Society Hill, 7, 10, 20, 28, 29, 30; Stateburg, 1, 17, 20, 21, 22, 28, 29, 30; Summerville, 1, 10, 12, 20, 21, 29, 30; Trenton, 1, 7, 19, 20, 21, 22, 27, 28; Trial, 1, 7, 8, 10, 20, 21, 22, 30; Walterboro, 29, 30; Winthrop College, 1, 2, 7, 11, 18, 19, 21, 22, 27, 28, 29; Yorkville, 11, 18, 19, 28, 29.

There was a total of 177 thunderstorms reported, on 24 dates, as follows: 12 on the 1st, 2 on the 2nd, 2 on the 3rd, 1 each on the 4th and 5th, 3 on the 6th, 16 on the 7th, 6 on the 8th, 2 on the 9th, 12 on the 10th, 6 on the 11th, 4 on the 12th, 2 on the 17th, 7 on the 18th, 9 on the 19th, 15 on the 20th, 14 on the 21st, 7 on the 22nd, 1 each on the 23rd and 24th, 8 on the 27th, 19 on the 28th, 15 on the 29th, and 12 on the 30th.

In addition the above, Charleston reported thunderstorms on the 1, 2, 7, 8, 10, 12, 20, 21, 22, 23, 28, 29, 30; Columbia on the 4, 5, 7, 10, 18, 20, 21, 28, 30.

The first cotton bloom was noted at Beaufort on June 12th. The first katy-did was heard at Saluda on the 29th.

Errata.—In the May, 1904, monthly report, on page 5, Greenwood mean temperature 70.0° should be 70.4°; page 6, Stateburg minimum temperature on 31st, 66° should be 65°.

#### REMARKS BY OBSERVERS.

Allendale.—The light rainfall was injurious to cotton and melons.—C. A. Glover.

Barksdale.—Crops did well. By the close of the month, cotton blooms were quite plentiful; the rains were very beneficial on the closing days. Destructive hail occurred within 2 miles of the station, on the 19th.—J. T. Garrett.

Batesburg.—The crop prospects continued promising throughout the month.—E. J. Hite.

Beaufort.—Mean temperature 2.4° below normal; precipitation 1.46 inches below. Cotton planted the first of the month looks well; early cotton is in bloom; corn did not do so well.—S. M. Benton.

Bennettsville.—Cotton did fairly well; old corn made fine progress; considerable corn planted this month, on stubble lands, and is doing well.—Jno. L. McCall.

Bowman.—The weather was favorable throughout the month for all crops, and prospects are very encouraging. Peaches and berries were plentiful.—B. O. Evans.

Clarks Hill.—Very dry and hot from the 7th to 29th. Subsoil drier than known for many years, and wells went dry.—Wm. S. Middleton.

Darlington.—Very heavy rain occurred on the 29th, when 1.18 inches fell in a short time; it was the first washing rain of the season.—E. R. McIver.

Dillon.—Gardens suffered for rain, but corn and cotton did well.—A. E. Rowell.

Gillisonville.—Month hot and dry. Crops improved during the first half, and were at a standstill during the latter half. Cotton remained small, but looked well at close. Corn did poorly.—Sam P. Saltus.

Heath Springs.—Crops on bottom lands were damaged by high water on the 29th. All crops did well this month.—J. A. Weaner.

Liberty.—Rainfall well distributed, and crops did well. Cotton grew rapidly, but fruited sparingly. Fruit plentiful.—Jno. T. Boggs.

Newberry.—Very dry month. Corn suffered from the drought.—W. G. Peterson.

Santuc.—It was a dry June, but crops made good growth, the temperature was generally favorable for growing crops.—E. W. Jeter.

Society Hill.—Oats were harvested; yields fine. Excessive rainfall was damaging to cotton. Corn and sweet potatoes very promising.—Maj. J. J. Lucas.

Stateburg.—The rains interfered but little with the cultivation of field crops, which were clean and well worked by the close of the month. The cool weather near the middle of the month caused lice to develop on cotton.—W. W. Anderson, M. D.

**VOL. VII.      COLUMBIA, S. C., JULY, 1904.      No. 7.**

**PROGRESS OF FARM WORK.**

The temperature conditions during July were nearly normal, although there were marked variations from the 19th to the 21st, when maximum temperatures of from 95° to 105° occurred over practically the entire State, and from the 24th to the 26th when the night temperatures were unusually low; each period was of too short duration to materially affect the growth or development of crops.

The precipitation was copious, and slightly in excess of the normal for July, except over small areas in the Savannah valley counties, where marked deficiencies occurred. Excessive precipitation over small areas in the eastern counties, injured bottom land crops locally, but, on the whole, the rainfall was well distributed and proved beneficial. Thunderstorms occurred on every day but one, and precipitation was recorded at some point on every day save one, although the two dates were not the same. There were numerous hail storms, and local high winds, but neither damaged crops to a material extent.

Too much rain in the eastern counties interfered somewhat with laying by crops, nevertheless fields were, as a rule, well cultivated and clean when finally laid by. Cultivation was practicable in the central and western counties during the greater part of the month, and crops were laid by in excellent condition.

While early corn was injured by drought in a few western counties, in most sections the corn crop improved steadily and became most promising. Late planting suffered less, and improved steadily.

The weather was generally favorable for cotton, which was thrifty, fruited heavily, and maintained a healthy, vigorous growth throughout the month. The plants were unusually free from disease, and from injurious insects, although boll worms appeared in a few localities, and, late in the month, rust and blight developed on light, sandy lands. The favorable conditions included the sea-island variety.

Tobacco developed into a very fine quality of leaf; curing operations made rapid progress. Rice improved, though not as rapidly as desirable owing to the scarcity of water for harvest flooding, but by the close of the month plenty of fresh water was available, and the crop improved rapidly. A large

and fine crop of watermelons was marketed. Peach shipments, which were heavy early in the month, gradually declined; late varieties of pears, plums, peaches and figs were plentiful; apples were scarce. Peas were sown extensively and came up to good stands. The weather was, on the whole, favorable for minor crops, gardens and pastures, having been better at the close than at the beginning of the month. Fall Irish potatoes and truck generally were planted extensively.

**Barometer and Wind Table for July, 1904.**

**CLIMATOLOGY FOR THE MONTH.**

**Temperature, in Degrees Fahrenheit.**

The mean temperature for July, 1904, was 79.4°, which is 0.5° below normal. The highest local mean was 81.1° at Sumter; the lowest 74.6° at Greenville. The monthly extremes were a maximum of 105° at Sumter on 7th, Gaffney on the 19th, and Aiken and Seivern on the 20th, and a minimum of 50° at Walhalla on the 24th, making the State range 55°. The greatest local monthly range was 49° at Gaffney and Seivern, the least was 27° at Georgetown. The mean of the daily maximum temperatures was 90.5°, and of the daily minima was 68.4°, making the average daily range 22.1°.

**Precipitation, in Inches.**

The precipitation averaged 5.96 inches, which is 0.71 above normal. The greatest local amount was 14.38 at Cheraw (1), the least was 1.44 at Clemson College. The greatest 24 hour fall was 6.50 at Cheraw (1) on the 23rd. The average number of days with 0.01, or more, precipitation was 12, ranging from 5 at Greenwood and Trenton to 17 at Darlington and Walterboro.

Hail.—Barksdale, 17, 27; Cheraw, Lugoff, 7; Columbia, 6, 25; Dillon, 2; Kingstree, 8; Newberry, Saluda, Walhalla, 25; Santuc, 17; Society Hill, 6; Trial, 25, 29, 30, 31; Yorkville, 21.

Excessive Precipitation.—Aiken, 31st, 2.30 in 3 hrs.; Allendale, 1st, 1.00 in 1 hr.; Barksdale, 27th, 4.31 in 24 hrs., 28th, 3.20 in 24 hrs.; Batesburg, 26th, 1.46 in 1 hr.; Cheraw, 8th, 1.49 in 1 hr., 23rd, 6.50 in about 9 hrs.; Gaffney, 22nd, 1.32 in 50 mins.; Lugoff, 23, 4.74 in 24 hrs.; Newberry, 16th, 1.60 in 1 hr., 23rd, 2.62 in 12 hrs.; Pinopolis, 24th, 2.67 in 24 hrs.; St. Matthews, 22nd, 2.30 in 3 hrs.; St. Stephens, 5-6th, 2.68 in 24 hrs.; Sumter, 29th, 2.01 in 1 hr., 25 mins.; Trial, 16th, 2.81 in 5 hrs., 45 mins.

Weather.—The average number of clear days was 13, of partly cloudy 12, and of cloudy ones 6.

Winds.—The prevailing direction of the wind was from the southwest at 22 stations, from the south at 16, from the west at 9, and from the north at 2, and from the northeast and southeast at 1 station each.

High Winds.—Charleston, 2; Cheraw, 12; Columbia, 7, 25, 27; Gillisonville, 21, 23; Liberty, 1, 5, 6, 16; Lugoff, 6, 8; Santuc, 16; Society Hill, 5.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Halos.—Charleston, 26, 27, 28.

Solar Halos.—Charleston, 2, 12, 18, 27, 29.

Fogs, Dense.—Blackville, 15, 30; Charleston, 27; Columbia, 31; Clemson College, 26; Gillisonville, 14; Heath Springs, 30, 31; Liberty, 9, 10; Little Mountain, Lugoff, 15; Seivern, 1, 15, 30, 31; Trial, 14, 15; Yorkville, 1, 31; Dillon, 4, 5, 30, 31.

Thunderstorms.—Barksdale, 8, 9, 12; Batesburg, 1, 22, 23, 24, 26, 28, 29; Beaufort, 1, 2, 4, 5, 6, 7, 8, 9, 10, 11, 12, 16, 17, 20, 21, 22, 23, 24, 25, 28, 29, 30, 31; Bennettsville, 21; Blackville, 6, 8, 9, 12, 16, 21, 22, 23, 25, 28, 29, 31; Camden, 7, 21; Cheraw, 1, 2, 5, 6, 7, 8, 9, 11, 12, 13, 16, 17, 20, 21, 22, 23, 28, 29; Clemson College, 9, 12; Darlington, 16, 20, 23, 29; Dillon, 2, 6, 7, 16, 20, 21, 28, 29; Due West, 31; Florence, 7, 29; Georgetown, 12, 28; Gillisonville, 4, 5, 6, 7, 8, 9, 10, 12, 20, 21, 22, 23, 24, 28, 29, 30; Greenville, 16, 21; Heath Springs, 12; Liberty, 8, 9, 10, 11, 15, 16, 17, 21, 22, 24, 25, 28, 29, 30, 31; Little Mountain, 21, 23, 25, 28; Lugoff, 7, 8, 9, 10, 16, 17, 20, 21, 22, 30; Newberry, 12, 16, 21, 23, 25, 27, 28, 30; Saluda, 8, 12, 16, 19, 20, 21, 22, 23, 25, 27, 28; Santuc, 7, 11, 12, 16, 17, 20, 21, 24, 25, 26; Seivern, 9, 12, 13, 17, 21, 22, 24, 26, 29; Society Hill, 5, 6, 7, 8, 16, 17, 21, 22, 23, 24, 25, 28, 29; Summerville, 6, 7, 12, 17, 18, 22, 23, 25, 31; Sumter, 29; Trenton, 6, 7, 8, 11, 16, 20, 21, 23, 27; Trial, 7, 8, 12, 14, 16, 20, 21, 22, 23; Walhalla, 8, 17, 20, 21, 31; Walterboro, 5, 6, 8, 10, 12, 17, 20, 21, 22, 23, 25, 26, 30, 31; Winthrop College, 1, 5, 7, 8, 10, 11, 12, 14, 21, 22, 23, 27, 28, 29, 30; Yorkville, 11, 12, 21, 28, 29.

There was a total of 252 thunderstorms reported, on 30 dates as follows: 4 on the 1st, 3 on the 2nd, 2 on the 4th, 6 on the 5th, 9 on the 6th, 13 on the 7th, 14 on the 8th, 9 on the 9th, 6 on the 10th, 7 on the 11th, 17 on the 12th, 2 each on the 13th-14th, 1 on the 15th, 15 on the 16th, 10 on the 17th, 1 each on the 18th-19th, 12 on the 20th, 22 on the 21st, 13 on the 22nd, 15 on the 23rd, 7 on the 24th, 10 on the 25th, 4 each on the 26th-27th, 15 on the 28th, 14 on the 29th, 6 on the 30th, 8 on the 31st.

In addition to the above, Charleston reported storms on the 1, 2, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16, 17, 20, 21, 22, 23, 24, 26, 28, 29, 30, 31; Columbia on the 5, 6, 7, 8, 10, 12, 16, 17, 20, 21, 22, 23, 25, 27, 28, 31.

Corrections.—In the June, 1904, number of the Monthly Report, page 5, Blackville, minimum temperature, 13th and other dates, should be 14th and other date; Little Mountain, mean temperature 77.6° should be 77.4°; Seivern, maximum temperature on 5th and other dates, should be 4th and other dates; on page 6, Little Mountain, mean maximum 89.7° should be 89.4°.

#### REMARKS BY OBSERVERS.

ANDERSON.—Cotton remained small but is well fruited; upland corn not promising; some sections of county had good rains, others had very little. BARKSDALE.—The month

was hot and dry until the 27th, and crops suffered, after which there were heavy, beneficial rains and crops improved. BATESBURG.—Drought did considerable damage during the first part of the month, particularly to corn; fine rains the latter part improved all crops, especially such as were planted late. BEAUFORT.—Mean temperature 2.0° below normal; precipitation 0.94 inch above; caterpillars appeared in several places, and cotton rusted in spots; dry, sunny weather was greatly needed by the close of the month; sweet potatoes and peas were planted to the end of the month. BENNETTSVILLE.—All crops were laid by at the end of the month; cotton began to shed. CLARKS HILL.—Excessive rains caused cotton to shed, but the rains were beneficial on late corn, pastures and grass for hay; crops have become somewhat grassy, and the ground was too wet to give them their last plowing. DARLINGTON.—The continued wet weather will probably damage cotton. DILLON.—July weather was more seasonable than any since March. GILLISONVILLE.—Month cool and wet, conditions beneficial to crops, especially corn and cotton, which improved very much, and were in excellent condition at close of the month; gardens and minor crops suffered. HEATH SPRINGS.—Old corn nearly matured, young corn promising; cotton became somewhat affected by a blight-like rust; fruit and vegetables were plentiful. LIBERTY.—Crop conditions generally fair to good; some sections suffered for moisture, and old corn "fired"; cotton fruited nicely, some fields are grassy, having been laid by too soon. LITTLE MOUNTAIN.—The rains came too late for early planted corn; other crops are better than for many years. NEWBERRY.—The rainfall was sufficient for all crops, and they made fine progress, giving promise of good yields. SOCIETY HILL.—Too much rain for cotton; corn, sweet potatoes, peas and pea forage are very promising. SUMMERVILLE.—The last half of the month was very rainy; in the last ten days there were 6.28 inches, which was too much for the best development of crops. SUMTER.—The rainfall on the 29th was the heaviest rain in years (2.01 in 35 minutes). TRENTON.—Precipitation 1.52 inches less than normal for July, and is 11.85 inches less than the average for the first 7 months of the year.

#### OSCILLATIONS OF CLIMATE.

The discovery that climatic elements are subject to certain oscillations, first remaining for a time above the mean derived from many years observations, and then again falling below this mean, has already led to many investigations which have been undertaken with a view to determine whether or not these oscillations occur with some regularity, in definite cycles. The problem, therefore, involves the determination of the length of the period and the amplitude of these oscillations. Such an investigation may be taken up from two different points of view. On one hand we may assume a period of a given length, which is determined by certain physical considerations, and we may try to discover whether the successive occurrences of the various phenomena in question actually show the existence of such a period. On the other hand, we may start without any definite period in mind, and may try to discover the unknown length of the period by different combinations of the successive values of one meteorological element. The first method mentioned is the one usually employed, because it naturally forces itself on the inquiring mind. Thus, from the very earliest times, persons have tried to prove that the moon's phases, and especially the varying position of the moon with reference to the earth, correspond to certain changes in the meteorological elements, but, as is well known, none of these attempts has yet led to any noteworthy result.—*Handbook of Climatology, Hann.*

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc. † Not used in the means or summary, apparently too high.

\*\* Received too late to be used in means.

STATISTICS

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR AUGUST, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., AUGUST, 1904. No. 8.

## PROGRESS OF FARM WORK.

The month had even temperatures, slightly below normal, until the 20th when a short period of moderately hot weather set in, and continued to the 25th; on the 26th a period of abnormally low temperatures began that continued, with a rising tendency after the 28th, to the close of the month. Neither the heat wave, nor the following cool spell were of sufficient intensity, nor of long enough duration to materially affect crop development, although the heat, following a wet spell, is said to have caused cotton to shed excessively in places, and the cool weather checked its previous rapid opening.

The precipitation was generally above the August average, with exceptions over small areas where slight and unimportant deficiencies occurred. The rainfall was quite evenly distributed; the extreme northwestern and the northeastern portions had the largest amounts—in excess of ten inches—while the greater part of the State had from 6 to 8 inches. Rains were of daily occurrence during the first two weeks, and were less frequent the rest of the month, although the soil was kept moist, in many places wet, by scattered, generally light showers, until the 26-27th when a general storm with moderately heavy cold rainfall again completely saturated the ground.

There were a few destructive hail-storms, confined to small areas, early in the month, and some damage to crops was caused locally by high winds; the heavy rains caused some of the smaller streams to overflow their banks, damaging crops on adjoining bottom lands, but the aggregate damage from all these sources was comparatively small.

The weather was favorable on corn which developed rapidly, and its condition at the close of the month was exceedingly promising. Early planted corn reached maturity, and, owing to adverse weather in the spring, was not as good as that part of the crop which was planted late in April and in May.

There were fears that the excessive rains, early in the month, would injure cotton by causing excessive shedding, and the development of rust, and these fears were partly realized, after the rains ceased, by considerable rust and shedding on sandy soils, but not to an extent to materially

reduce the prospective yield although there was less "top crop" fruitage than the size of the plants indicated. The rains were less damaging, and possibly were favorable, on clay land cotton which grew very fast and fruited satisfactorily. On the whole, the deterioration was less than is usual in August. Cotton began to open in the southern counties about the middle of the month, and by the close picking was active, while in the western counties the crop is late, and opening did not begin until the last few days, and none was picked.

Tobacco curing was finished; the quality of the late crop was impaired slightly by the wet weather. Rice thrived, and the earliest ripened. The soil was in excellent condition for the germination of fall truck. Sweet potatoes, cane, and other fall crops did well. Grass for hay attained rank growth. There was very little fall plowing done. The rains caused much late fruit to rot as it ripened, and impaired the quality of late melons. On the whole the weather was favorable for all crops.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for August, 1904, was 77.6°, which is 1.7° below normal. The highest local mean was 79.8° at Charleston; the lowest 72.4° at Greenville. The monthly extremes were a maximum of 102° at Sumter on the 22nd, and a minimum of 54° at Cheraw and Greenville on the 28th, making the State range 48°. The greatest local monthly range was 45° at Aiken, the least was 31° at Charleston and Georgetown. The mean of the daily maximum temperatures was 87.4°, and of the daily minimum temperatures was 67.8°, making the average daily range 19.6°.

## Precipitation, in Inches.

The precipitation averaged 8.47 inches, which is 2.17 above normal. The greatest local amount was 13.43 at Effingham, the least was 3.92 at Aiken. The greatest 24-hour fall was 5.14 at Beaufort on the 27th. The average number of days with 0.01, or more, precipitation was 14, ranging from 6 at Calhoun Falls and Winnsboro to 21 at Summerville.

Hail.—Batesburg, Blackville, Seivern, 15th; Bennettsville, 26; Newberry, 15th, 26th; St. Stephens, 23rd; Walhalla, 15, 23rd.

Excessive Precipitation.—Allendale, 6th, 1.15 in 1 hr.; Anderson, 8th, 4.33 in 24 hrs., 27th, 3.15 in 24 hrs.; Beaufort, 27th, 5.08 in 3 hrs.; Calhoun Falls, 7-8th, 3.25 in 24 hrs.; Charleston, 3-4th, 2.76 in 24 hrs.; Columbia, 6th, 1.11 in 30 mins., 19th, 1.28 in 15 mins.; Clemson College, 7-8th, 2.75 in 24 hrs.; Gaffney, 26-27th, 2.84 in 24 hrs.; Greenville, 1st, 2.88 in 24 hrs.; Greenwood, 5th, 2.10 in 1 hr.; Heath Springs, 27th, 2.55 in 15 hrs.; Little Mountain, 5th, 1.90 in 1 hr. 15 mins.; Smiths Mills, 4th, 2.80 in 24 hrs.; Walterboro, 27-28th, 4.85 in 12 hrs.; Winthrop College, 27th, 2.90 in 24 hrs.

Weather.—The average number of clear days was 12, of partly cloudy 9, and of cloudy ones 12.

Winds.—The prevailing direction of the wind was from the southwest at 22 stations, from the south at 13, from the west

at 9, from the north at 3, from the east at 2, and from the northeast, southeast and northwest at 1 station each.

High Winds.—Blackville, 18th; Columbia, Santuc, 15th; Saluda, 15th, 23rd.

#### MISCELLANEOUS PHENOMENA (with dates).

Lunar Halos.—Charleston, 15, 26.

Solar Halos.—Charleston, 1, 16, 19, 20, 26; Gillisonville, 11th.

Fogs, Dense.—Blackville, 25; Charleston, 15; Cheraw, 2, 12; Columbia, Newberry, 4; Dillon, 1, 2, 12, 13, 14, 15, 16, 17, 18, 19, 20, 25, 28; Greenville, 5, 16; Heath Springs, 2, 3, 4, 10, 15, 25; Liberty, 1, 2, 3, 4, 5, 6, 10, 16, 31; Saluda, 3, 4, 5, 12; Santuc, 3, 4, 13, 16, 24; Seivern, 1, 5, 11, 26; Society Hill, 1, 12; Yorkville, 3, 6.

Thunderstorms.—Barksdale, 2, 15; Batesburg, 1, 2, 3, 4, 5, 6, 8, 16, 28; Beaufort, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 13, 14, 15, 16, 17, 18, 19, 20, 22, 23, 24, 26, 27; Blackville, 2, 4, 5, 6, 7, 9, 15, 19, 22, 23, 26; Bowman, 2, 3, 4, 5, 6, 7, 9, 15, 19, 20, 23, 26, 27; Cheraw, 1, 2, 3, 5, 9, 10, 11, 12, 15, 19, 23, 26; Dillon, 3, 4, 5, 9, 10, 23; Georgetown, 1, 2, 3, 4, 5, 6, 8, 15, 17, 23; Gillisonville, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 15, 17, 18, 19, 26, 27; Greenville, Heath Springs, 26; Liberty, 1, 5, 7, 10, 11, 15, 19, 25; Little Mountain, 4, 5, 23, 26; Newberry, 5, 9, 10, 11, 12, 15, 23, 26; Saluda, 2, 5, 9, 11, 15; Santuc, 1, 12, 15, 19, Seivern, 2, 4, 7, 8, 9, 12, 15, 24, 27; Society Hill, 11, 15, 19, 23, 26, 27; Summerville, 2, 6, 7, 17, 18; Trenton, 3, 4, 5, 9, 10, 11, 12, 23; Trial, 6, 7, 10, 12, 15, 18, 19, 23; Walhalla, 15, 23, 26; Walterboro, 1, 2, 4, 5, 6, 7, 8, 9, 11, 14, 16, 17, 18, 22, 23, 26, 27; Winthrop College, 2, 7, 8, 10, 11, 26, 27; Yorkville, 2, 5, 9, 10, 11, 15, 23, 25, 26.

There was a total of 211 thunderstorms reported, on 27 dates as follows: 10 on the 1st, 12 on the 2nd, 8 on the 3rd, 11 on the 4th, 15 on the 5th, 9 on the 6th, 10 on the 7th, 8 on the 8th, 12 on the 9th, 10 each on the 10th and 11th, 9 on the 12th, 1 on the 13th, 2 on the 14th, 15 on the 15th, 3 on the 16th, 5 on the 17th, 6 on the 18th, 9 on the 19th, 2 on the 20th, 3 on the 22nd, 14 on the 23rd, 2 on the 24th, 2 on the 25th, 14 on the 26th, 7 on the 27th, and 1 on the 28th.

In addition to the above, Charleston reported storms on the 1, 2, 3, 4, 5, 6, 9, 13, 14, 15, 17, 18, 19, 22, 23, 26, 27; Columbia on the 1, 2, 4, 5, 6, 8, 9, 10, 11, 12, 15, 19, 23, 26.

#### REMARKS BY OBSERVERS.

ALLENDALE.—The rainfall was ample; cotton will yield well this season. BARKSDALE.—Cotton began opening fast at the close of the month; the cool nights from the 26th to the 28th did much damage by causing bolls to rot. BATESBURG.—A hailstorm on the 15th did considerable damage, especially to peas and late cotton; early cotton

opened fast. BEAUFORT.—Mean temperature was 2.3° below normal, precipitation 4.76 inches above; this has been the coolest summer since 1889; cotton deteriorated greatly during the month, considerable was picked and ginned. BENNETTSVILLE.—Cotton picking was active in places by the close of the month; there was a large grape yield. BOWMAN.—Thunderstorms were unusually frequent this month, with occasional light hailstorms; the weather was favorable at the close for picking cotton which opened later than usual. DILLON.—Cotton shed badly this month, although the plants bear an average crop; the rainfall was ample. GILLISONVILLE.—The month was cool and unfavorable for saving forage; cotton was injured during the first half, it opened rapidly and picking was rushed the latter part. HEATH SPRINGS.—The weather was favorable for corn, which is a fine crop; there was too much rain for cotton, causing much shedding; all minor crops are good. LIBERTY.—A wet month; cotton continued to shed to its close, although blooming; the corn crop is generally good; peas and grass for hay are fine. NEWBERRY.—Excessive rainfall caused cotton to shed and rust. SALUDA.—High winds on the 15th blew down trees and fences; on the 23rd it blew down some buildings and trees; it was accompanied by hail. SOCIETY HILL.—Frequent and excessive precipitation was very damaging to the cotton crop, the yield will hardly exceed that of last year; other crops are very promising. TRENTON.—Precipitation 1.40 inches more than normal for August, and 10.45 less than the average for the first eight months. STATEBURG.—Although the amount of precipitation was excessive, there were only four days on which it was heavy enough to wash lands, or flood them, and, on the whole, crops seem to have been benefited especially where the fields were well fertilized, and on clay soils.

#### KILLING FROST IN AUTUMN.

In years when the development and growth of the cotton plant is late, for any reason whatever, and the plants bear a large crop of unripe bolls, the occurrence of killing frost determines largely the size of the yield. If the frost occurs early the yield is reduced, and if frost is deferred beyond the usual, or average date of occurrence the crop yield is largely increased. On most soils the plants continue to bloom and fruit until killed by frost. The time from blooming to opening ranges from 45 to 60 days, the variation being caused by the differences in soil, fertilizers used and the weather during the interval. The attached table gives the times of average and earliest killing frosts at the stations having the longest and most complete records. The time covered by the table is not the same for all the stations, but ranges from ten to thirty-three years back, the oldest record being that for Charleston:

#### First Killing Frosts in Autumn.

OCTOBER 19, 1904

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR SEPTEMBER, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., SEPTEMBER, 1904. No. 9.

## PROGRESS OF FARM WORK.

While the closing dates of September, 1904, had midsummer heat, and were the warmest on record for those dates in a period of from 10 to 33 years, the month as a whole was only slightly warmer than usual, and had a wide range in temperature, especially during the last decade. Light frosts were reported from Newberry county on the 23-24th, which is unusually early. This variability in temperature had no noticeably harmful effect on crop development, although it undoubtedly hastened the maturity of growing crops and the opening of cotton, some of which opened prematurely from the effects of the heat.

The precipitation was below normal, with deficiencies ranging from one to over three inches, except in the north-eastern group of counties where it was excessive, due to torrential rains during the passage of a West India hurricane that impinged on the coast between Charleston and Georgetown during the night of the 13-14th. This storm was accompanied by gales that damaged crops severely in Georgetown, Horry, Marion and Marlboro counties. The aggregate damage to crops is estimated at between a half and one million dollars.

Drought conditions became severe in the western and central counties, and only slightly less so in the southern ones, by the close of the month, and adversely affected the development of root and very late forage crops, late corn, peas, and some cotton. Only the very late corn and cotton were materially injured, amounting to less than 10 per cent. of the entire acreage, the rest having reached maturity before the drought became so severe.

The weather was favorable, after the 6th in the central and western counties and the 14th in the eastern ones, for harvesting and haying, gathering corn and picking cotton, but was too dry for fall plowing or seeding operations.

The bulk of the cotton opened and was picked during the month, except in the western counties where less than half the bolls opened by the end of the month. There was some premature opening due to the excessive heat during the closing days, and to the drought, although most of the bolls became full grown and opened normally. The weather was entirely favorable on sea-island cotton.

Haying made rapid progress and was practically finished in all parts under very favorable weather conditions, and the crop was saved in excellent condition. Rice harvest also progressed rapidly, and was practically finished. Only a small portion of the corn crop was housed, although nearly all ripened, with the ears well filled and the kernels plump and hard. There was too little rain for fall truck to thrive, and for the quick germination of late planted seed, especially in the southern parts of the coast truck regions. Minor crops were generally too nearly matured to have been affected by the drought, and are, as a rule, yielding well. Pastures failed rapidly.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for September, 1904, was 75.8°, which is 0.2° above normal. The highest local mean was 77.6° at Aiken; the lowest 69.6° at Greenville. The monthly extremes were a maximum of 101° at Anderson on the 30th, and a minimum of 44° at Greenville and Santuc on the 24th, making the State range 57°. The greatest local monthly range was 51° at Anderson, Gaffney, Newberry, Santuc and Seivern, the least was 36° at Beaufort, Charleston and Summerville. The mean of the daily maximum temperatures was 85.8°, and of the daily minimum temperatures was 65.8°, making the average daily range 20°.

Light Frost.—Newberry, 23, 24.

## Precipitation, in Inches.

The precipitation averaged 2.46 inches, which is 1.65 below normal. The greatest local amount was 9.50 at Smiths Mills, the least was "Trace" at Little Mountain. The greatest 24-hour fall was 7.60 at Smiths Mills on the 13-14th. The average number of days with 0.01, or more, precipitation was 4, ranging from none at Little Mountain to 9 at Walterboro.

Excessive Precipitation.—Beaufort, 5th, 2.50 in 24 hrs.; Bennettsville, 14th, 3.00 in 24 hrs.; Conway, 13-14th, 4.70 in 22 hrs.; Effingham, 13-14th, 4.70 in 24 hrs.; Georgetown, 13-14th, 5.95 in 24 hrs.; Seivern, 6th, 3.58 in 15 hrs.; Smiths Mills, 13-14th, 7.60 in 24 hrs.; Society Hill, 4th, 2.51 in 24 hrs.; Dillon, 14th, 7.24 in 24 hrs.

Weather.—The average number of clear days was 19, of partly cloudy 7, and of cloudy ones 4.

Winds.—The prevailing direction of the wind was from the northeast at 18 stations, from the west at 9, from the northwest at 6, from the southwest at 5, from the north and east at 4 each, and from the south at 1 station.

High Winds.—Bowman, 4, 14; Charleston, Cheraw, Columbia, Conway, Georgetown, Society Hill, Trial, Yorkville and Dillon, 14; Saluda, 14, 22; Summerville, 13.

## MISCELLANEOUS PHENOMENA (with dates).

Lunar Coronæ.—Santuc, 25, 26.

Lunar Rainbow.—Columbia, 26.

Parhelion.—Stateburg, 20th.

Earthquakes (slight).—Summerville, 5th, 10 a. m.; 10th, 9:27 a. m.

Solar Halos.—Charleston, 6, 9, 27, 30; Stateburg, 3, 18, 27.

Fogs, Dense.—Beaufort, Charleston, Heath Springs, Summerville, 29; Blackville, 19, 20, 29; Bowman, 1, 2, 3; Cheraw, 2; Clarks Hill, 19; Newberry, Saluda, 17, 19; Seivern, 2, 13, 19, 20; Society Hill, 2, 3, 29; Stateburg, 2, 19, 20; Trial, 9, 29; Dillon, 3, 19, 27, 28, 29.

Thunderstorms.—Beaufort, 4, 5, 6, 7, 13, 19, 20, 21; Blackville, Stateburg, 4, 5, 20; Bowman, 4, 21; Camden, Florence, Trial, Yorkville, 5; Cheraw, 4; Heath Springs, Trenton, 20; Dillon, 5, 20; Liberty, 4, 8, 21, 26, 27; Newberry, 4, 20; Saluda, 3, 4; Seivern, 5, 6; Summerville, 20, 21.

There was a total of 38 thunderstorms on 12 dates as follows: 1 on the 3rd, 7th, 8th, 13th, 19th, 26th, 27th; 8 on the 4th and 20th; 9 on the 5th; 2 on the 6th, and 4 on the 21st.

In addition to the above, Charleston reported storms on the 5, 6, 7, 19, 20, 21st; Columbia on the 4-5th.

Barometer and Wind Table for September, 1904.

#### REMARKS BY OBSERVERS.

ALLENDALE.—During the latter part of the month the middle of the days were hot and the nights cool; cotton about all gathered, although some still being picked. BARKSDALE.—Drought caused much cotton to open prematurely; it has been too dry to sow grains; the cotton crop is very short. BATESBURG.—The weather was very favorable for haying; early cotton about all open, late plantings opening fast; minor crops needed rain at close of the month. BEAUFORT.—The mean temperature was 0.9° below normal; the accumulated deficiency since January 1st is 439°; the September deficiency in precipitation was 0.90 inch; the accumulated deficiency is 1.65 inches; the month was very favorable for picking cotton and curing hay; it was too hot and dry for fall planting. BOWMAN.—September has been a dry month, no heavy rains whatever; unusually fine weather for haying and for picking cotton; cotton yielding well. CLARKS HILL.—The month was unusually favorable for picking cotton and for haying; rain was needed for gardening and for preparing lands for grain. GEORGETOWN.—On the 14th from 1 a. m. to 4:30 a. m. winds from the northeast, a lull and shifting to west and northwest at 6:30 a. m.; greatest velocity probably between 60 and 70 miles per hour. HEATH SPRINGS.—At the close of the month much of the

cotton was open, picked and sold; most of the corn was ready for harvest. LIBERTY.—Precipitation very light, late crops needed rain, especially turnips; cotton deteriorated greatly, and there is no top crop; a large crop of peavine hay was saved in fine condition. LITTLE MOUNTAIN.—The month had the least rainfall of any on record at this station, the drought is extreme, and fall crops are dying; in many fields cotton is all open and picked; no oats were sown. NEWBERRY.—A very dry month; cotton opened very fast and picking was rushed. SOCIETY HILL.—The month was very favorable for harvesting crops; much cotton and pea vine hay was gathered in fine condition; the corn crop is excellent. STATEBURG.—Most of the months rain fell on the 4-5-6th, after which the weather was most favorable for harvesting the various crops as they ripened; lack of moisture will shorten the cotton crop to some extent, as well as late food and forage crops. TRENTON.—Precipitation 3.08 inches less than normal for September, and 13.57 inches less than the average for the first 9 months of the year.

AUGUST ERRORS.—The following corrections should be made in the August, 1904, Monthly Report: Page 8, Anderson, precipitation on the 19th omitted, should be 1.10, and total 11.13 should be 12.13; also on page 5, total 11.13 should be 12.13. Page 8, Clemson College, precipitation on 2nd 1.18 should be 0.18, and total 10.48 should be 9.48; also on page 5, total 10.48 should be 9.48. Page 6, Summerville, mean minimum 68.7° should be 68.8°, and on page 5, mean temperature 77.1° should be 77.2°. Page 6, Sumter, mean minimum 70.0° should be 69.8°, and on page 5, mean temperature 81.9° should be 81.8°.

#### COL. EVANDER RODERIC McIVER.

Col. McIver died at his beautiful home near Darlington on September 14, 1904.

He served his State from early manhood to the time of his death in many and various capacities. First as a soldier in active service, then in civil life in a number of positions, the highest of which was State Treasurer. He was a member of several organizations for the advancement of agricultural interests of his State and his county. He served as President of the South Carolina Agricultural Society for several terms and remained a director to the time of his death. He was a charter member of the Darlington Agricultural Society and always took an active part in its management.

The greatest good that Col. McIver did for his community was, probably, in the example he set as a scientific farmer and as a breeder of blooded stock of all domestic kinds. He was largely an experimental farmer, but every experiment he tried was to follow out a well conceived and thoroughly matured plan or theory, with a definite and practical object in view, and he demonstrated that such experiments may be made both educational and profitable. In this way he became connected with the Climate and Crop Service of the Weather Bureau as a voluntary observer for he found that the records collected and published by the Weather Bureau were of prime importance in carrying out his crop and variety experiments.

Col. McIver was not a ready writer, and it is a matter of regret that he did not write more freely for publication the valuable lessons in scientific farming he was so well qualified to give. His weekly reports as a climate and crop correspondent were absolutely true, according to his best judgment, which was seldom wrong.

His death was a distinct loss to his community where he was so well loved, to his State in which he was honored, and to the Weather Bureau that so highly valued his cooperation.

CLIMATOLOGICAL DATA FOR THE MONTH OF SEPTEMBER, 1904.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.  
 § Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc. † Not used in the means or summary, apparently too high.  
 ++ Mean temperature at Bennettsville is apparently too high, and has not been used in the means or in the summary.

STATIONS.

From 14th to 26th inclusive 2 p. m. readings were taken as maximum temperatures

$$f(x) + 101 + 102$$

# TOTAL PRECIPITATION FOR SEPTEMBER, 1904.

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR OCTOBER, 1904.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF

WILLIS L. MOORE,

CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,

SECTION DIRECTOR.

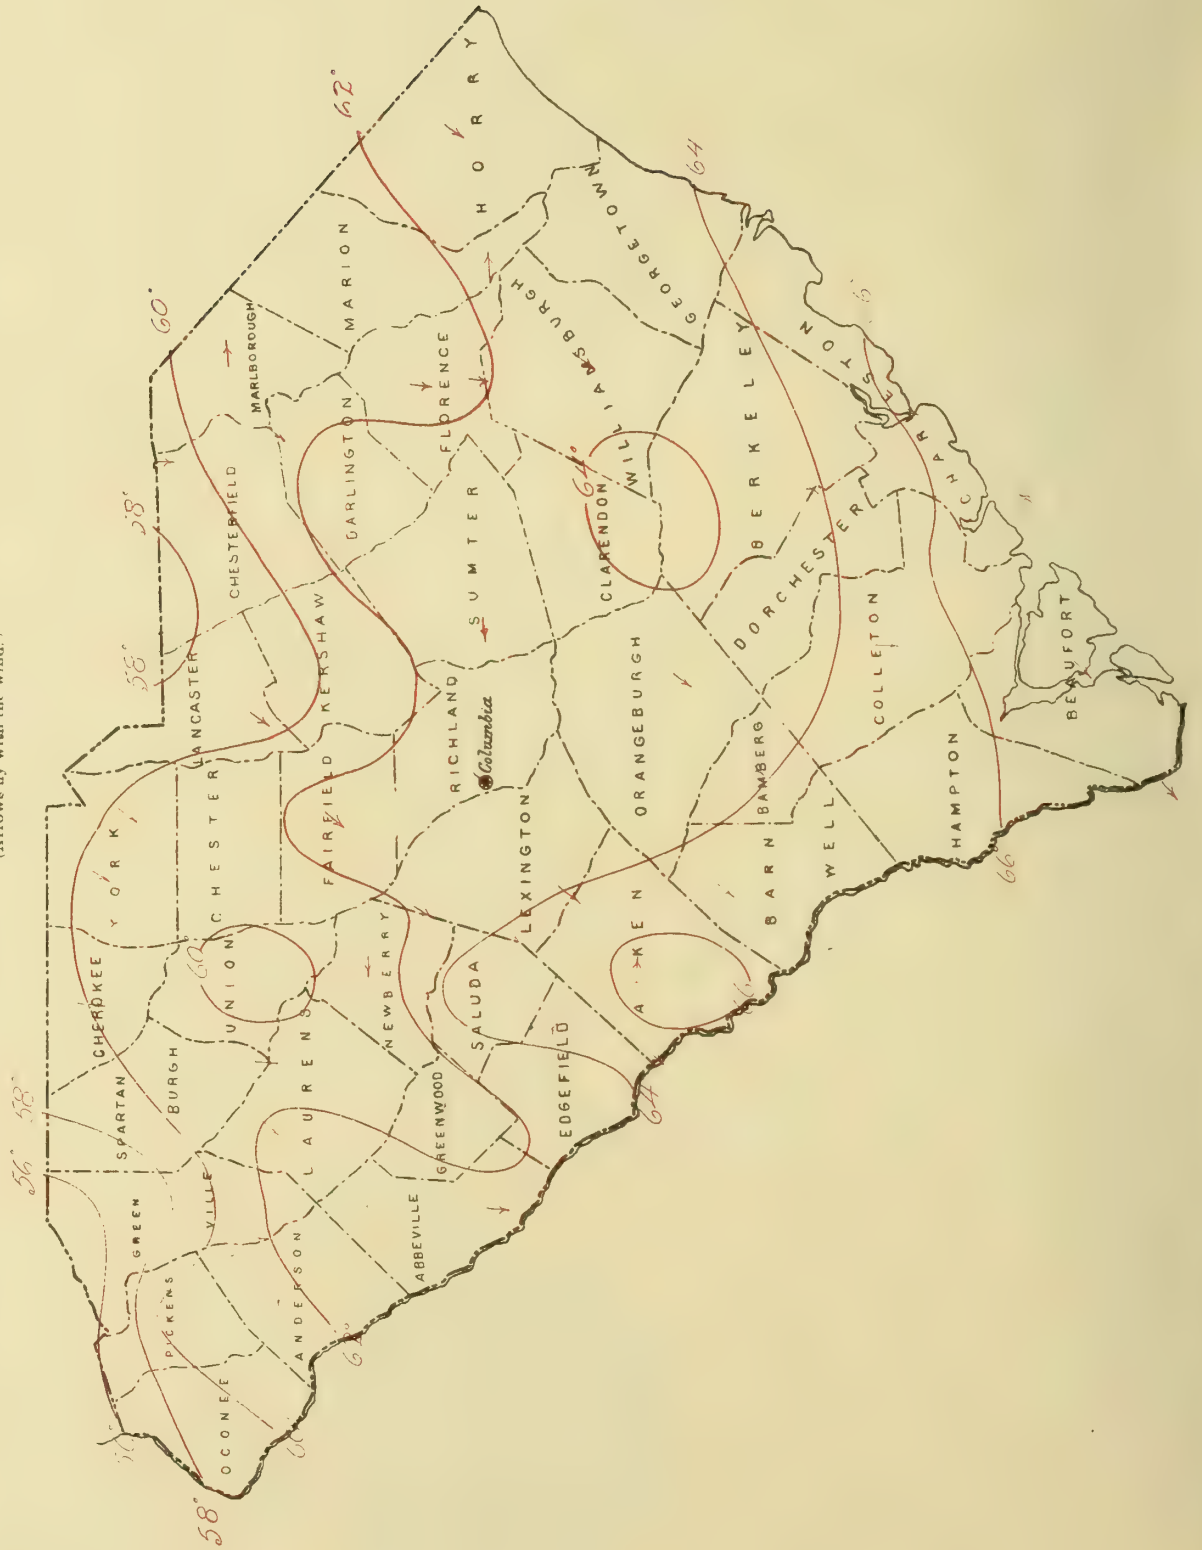

RALEIGH, N. C.  
WEATHER BUREAU OFFICE.

NOVEMBER 18, 1904.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR OCTOBER, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., OCTOBER, 1904. No. 10.

## PROGRESS OF FARM WORK.

The month was exceptionally fine for gathering ripened crops, owing to the almost entire absence of rain over the western parts and the few rainy days in the central and eastern ones.

The temperature was variable, with a fairly constant warm period from the 1st to the 12th, during which time it ranged generally above normal. After the 12th it was somewhat cooler than usual with light to heavy frosts over the western counties on the 16th-17th, that did little, if any, damage. Frosts were general on the 23-24th, killing over a considerable portion of the western and central portions, and generally heavy in the interior and light along the coast. There was little vegetation liable to injury, so the damage was slight although some top crop cotton was destroyed on low lands where the frost was killing.

The precipitation consisted of widely scattered, very light showers until the 20-21st when a general rain occurred over the eastern counties, heavy in places, but mostly light. Another general rain occurred on the 25-26th that covered the whole State but was very light in the extreme western parts and only moderately heavy in the central and eastern parts. This rain failed to relieve the severe drought that prevailed throughout the month over the western half of the State, where the ground was too dry for plowing and seeding, and for growth or full maturity of root crops and late peas. The moisture condition of the soil was more favorable in the eastern half, although seeding operations were delayed somewhat by the rush incident to gathering the large and rapidly opening cotton crop, and to harvesting the excellent corn crop as well as saving a fairly heavy fall hay crop, all of which were given the preference. For these reasons less than the usual amount of grains was sown by the close of October.

Cotton opened very fast and practically 90 per cent of the crop was picked by the close of the month, while nearly all of it was open, but a scarcity of pickers in some sections prolonged picking somewhat. The lint was saved in exceptionally fine condition without weather stain or sand.

Nearly all of a large, well matured corn crop was housed; sweet potatoes dug and pitted; a fairly heavy fall hay crop cured; and rice harvest finished under the most favorable

weather conditions, except in the Georgetown district where there was some delay from wet weather. The whole month was an almost ideal one for harvesting operations. There was too little rain for fall gardens and for truck, but such of the minor crops as came to maturity during September were not affected by the drought, and were gathered this month. The worst effect of the drought was to delay wheat and oats seeding, especially the latter.

Barometer and Wind Table for October, 1904.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for October, 1904, was 62.4°, which is 0.6° below normal. The highest local mean was 67.5° at Aiken; the lowest 56.8° at Greenville. The monthly extremes were a maximum of 98° at Clarks Hill on the 12th, and a minimum of 26° at Greenville and Santuc on the 24th, making the State range 72°. The greatest local monthly range was 66° at Gaffney and Santuc, the least was 39° at Charleston. The mean of the daily maximum temperatures was 74.8°, and of the daily minimum temperatures was 49.9°, making the average daily range 24.9°.

Frosts (First Light of Season).—14th, Barksdale; 15th, Anderson, Bowman, Clarks Hill, Clemson College, Greenville, Greenwood, Liberty, Little Mountain, Saluda, Santuc, Seivern, Trial; 16th, Bennettsville, Darlington, Florence, Heath Springs, Society Hill, Spartanburg, Walhalla, Winthrop College; 17th, Gaffney, Summerville; 23rd, Batesburg, Blackville, Columbia, Dillon, Georgetown, Stateburg, Trenton, Walterboro, Winnsboro, Yorkville; 24th, Beaufort, Camden, Charleston, Conway, Due West, Edisto, Effingham, Kingstree, St. Matthews, St. Stephens, Smiths Mills, Yemassee, Enoree, Pelzer; 28th, St. George.

Frosts (First Killing of Season).—16th, Santuc, Seivern; 23rd, Greenville, Newberry, Winthrop College; 24th, Bennettsville, Bowman, Blackville, Clarks Hill, Clemson College, Darlington, Florence, Gaffney, Greenwood, Heath Springs, Liberty, Little Mountain, Spartanburg, Stateburg, Trial, Walhalla; 25th, Barksdale.

Ice (First of Season).—24th, Bennettsville, Blackville, Santuc, Stateburg, Seivern.

## Precipitation, in Inches.

The precipitation averaged 1.10 inches, which is 2.09 below normal. The greatest local amount was 4.75 at Charleston, the least was "none" at Walhalla. The greatest 24-hour fall was 3.91 at Charleston on the 20th. The average number of days with 0.01, or more, precipitation was 3, ranging from none at Aiken, Clemson College, Greenville, Liberty and Walhalla to 6 at Charleston, Pinopolis and Summerville.

Excessive Precipitation.—Charleston, 20th, 3.91 in 24 hrs.; Smiths Mills, 22nd, 2.50 in 24 hrs.

Weather.—The average number of clear days was 23, of partly cloudy ones 5, and of cloudy ones 3.

Winds.—The prevailing direction of the wind was from the northeast at 26 stations, from the north at 10, from the east and west at 6 each, from the south and southwest at 1 station each.

High Winds.—Charleston, 17; Columbia, 6; Liberty, 7; Little Mountain, Saluda, 22; Seivern, Society Hill, 14; Summerville, 6, 7, 13.

## MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston, 18, 19.

Lunar Halos.—Blackville, Charleston, Stateburg, 19; Little Mountain, 27.

Earthquakes (slight).—Summerville, 1st, at 3:45 a. m.

Birds (Migration of).—Santuc, 17th, first robin seen; Stateburg, 11th, last swallow seen.

Fogs, Dense.—Charleston, 11, 12, 26, 27; Columbia, 21, 26, 27; Seivern, 19; Stateburg, 25; Summerville, 11.

Thunderstorms.—Barksdale, Blackville, Bowman, Liberty, Newberry, Saluda, Stateburg, Yorkville, 6th; Beaufort, 3rd; Little Mountain, 7th.

There was a total of 10 thunderstorms on three dates as follows: 1 on the 3rd, 8 on the 6th, and 1 on the 7th.

## REMARKS BY OBSERVERS.

BARKSDALE.—Cotton practically all gathered; frost killed the small unripe bolls; corn was mostly housed, and is a good crop; a little grain was sown. BATESBURG.—Weather was very fine for gathering crops; cotton about all open, and, in many places, all picked; sweet potatoes being gathered, yields poor; no grains were sown owing to drought. BEAUFORT.—Mean temperature was  $0.3^{\circ}$  and precipitation 2.64 inches below normal; the month was fine for gathering hay and cotton, and nearly all cotton was picked; the drought was very injurious to fall truck. BOWMAN.—There was practically no rain this month; many streams are dry and stock suffered for water; no small grain sown; cotton nearly all picked, and is the best crop in many years. CLARKS HILL.—A dry month, very favorable for picking cotton; land is too hard to plant to grain. HEATH SPRINGS.—All crops were gathered in good condition; yields of corn, peas, and potatoes were good, cotton not so good; some oats were sown. LIBERTY.—Dry and dusty month; crop gathering was nearly completed; a few fields of oats were sown; stubble fields could not be plowed; corn, pea and hay crops were good; cotton nearly all open and picking well advanced; laborers scarce; water low in streams and wells. LITTLE MOUNTAIN.—Some oats were sown during the latter part

of the month, soil too dry for it to germinate; no fall plowing done except on bottom lands; all crops gathered; all streams very low. NEWBERRY.—Very dry month, splendid weather for gathering crops; too dry to sow grain. SEIVERN.—Leaves shedding in deciduous forests; month very dry and all streams very low. SOCIETY HILL.—Cotton, peavines, hay and other crops harvested in first class condition. STATEBURG.—The weather was remarkably favorable for the maturing of cotton on clay soils, and for gathering it in good condition; there was not enough rain for the best development of sweet potatoes, and the crop will probably be short; all late crops were more or less damaged by insufficient rain. TRENTON.—The precipitation was 3.55 inches less than the normal, and is now 17.03 inches less than the normal for the first 10 months of the year.

## SAM P. SALTUS.

Mr. Saltus died on October 5th at his home in Gillisonville, S. C. He began his connection with this service, as a voluntary observer, in February, 1895. He had previously served as a clerk in the Instrument Division of the Central Office, at Washington, D. C.

During the interval from the first report to the time of his death, he did not fail to render a single monthly report, and, with one exception, every report was complete. The exception was caused by sickness. His comments on the month's weather were always pertinent and epigrammatic. As a climate and crop correspondent he was reliable and his reports trustworthy, although they were, as a rule, tinged with pessimism due as much to his surroundings as to temperament. While this office regrets his death, it takes pleasure in paying him this tribute to his faithfulness and his efficiency as a voluntary observer. His death necessitated the closing of his station.

## CORRECTIONS.

The following corrections occur on the September, 1904, Monthly Report: Page 5, Bennettsville, maximum temperature on 14th and other dates, should be on 18th and other dates; Society Hill, mean temperature  $72.4^{\circ}$ , should be  $72.5^{\circ}$ ; Trenton, mean temperature  $75.4^{\circ}$  should be  $75.3^{\circ}$ ; Walterboro, total precipitation 4.00 inches should be 4.04; Yemassee, minimum temperature  $51^{\circ}$  on 18th, should be  $54^{\circ}$  on the 25th. Page 6, Bennettsville, temperatures on the 9th, 88, 60 should be 87, 57; on 10th, 85, 62 should be 88, 60; 11th should be 85, 63; beginning with 12th all temperatures should be set back one day; on 29th temperatures 93, 64, should be 95, 70.

According to the investigations of Prof. Frank H. Bigelow, of the Weather Bureau, ordinary storms do not reach to an altitude of much, if any, over 4,000 feet, while very few storms reach an altitude of 10,000 feet.

The drought that existed during September and October in the western portions of this State, also affected western North Carolina, as well as the greater part of Georgia, Alabama and Mississippi.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR NOVEMBER, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., NOVEMBER, 1904. No. 11.

## PROGRESS OF FARM WORK.

The weather conditions throughout November were favorable for gathering what crops remained in the fields, consisting mainly of late, scattering bolls of cotton, although some fields received their first picking during the month; gathering and husking corn; picking seed-peas; digging and pitting sweet potatoes; and gathering minor crops such as turnips, pea-nuts, and other root crops.

A general killing frost, except along the coast where it was a heavy frost, on the 15th, with freezing temperatures and thin ice over the upper parts of the State, stopped all further growth except of the very hardiest vegetables in the coast truck regions, and ended the growing season of 1904.

The temperature averaged slightly below normal, but was never cold enough to afford safe opportunity for butchering farm-hogs, save in the western portions where much meat was cured and packed.

Plowing was delayed by drought, but enough rain fell early in the month to soften the ground and permit preparation of lands for wheat and oats, and a large acreage of both grains was sown during the month. Germination was slow, owing to the prevailing cool weather, but was in the main satisfactory. Wheat and oats seeding was not finished.

Rice thrashing was practically finished, and the yields were not as large as the mid-summer condition indicated that they would be.

The yields of corn came up to expectation, and gathering confirmed the earlier promising reports. Both early and late planted corn were equally good.

There were generally poor yields of minor fall crops over the western parts, attributable to the long and severe drought during September and October; in the eastern parts where the rainfall was more copious, the fall crops were generally excellent.

During November, as during the previous gathering season this year, there was practically no loss in harvesting from bad weather, and all crops were saved in the very best condition.

Barometer and Wind Table for November, 1904.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for November, 1904, was 51.6°, which is 2.2° below normal. The highest local mean was 57.2° at Charleston; the lowest was 46.2° at Greenville. The monthly extremes were a maximum of 80° at Walhalla, on the 22nd, and a minimum of 22° at Greenville and Santuc on the 15th, making the State range 58°. The greatest local monthly range was 55° at Walhalla, the least was 37° at Charleston. The mean of the daily maximum temperatures was 63.6°, and of the daily minimum temperatures was 39.7°, making the average daily range 23.9°.

Frosts (First Killing of Season).—In addition to, and to complete the list published in the October number. On the 1st at Cheraw, Dillon, Logoff. On the 13th at Trenton. On the 14th at Aiken, Allendale, Anderson, Batesburg, Calhoun Falls, Camden, Edisto, Effingham, Georgetown, Kingstree, Pelzer, Pinopolis, St. George, St. Matthews, St. Stephens, Saluda, Smiths Mills, Summerville, Yemassee, Yorkville. On the 15th at Beaufort, Columbia, Conway, Society Hill, Walterboro, Winnsboro.

Ice.—Thin ice was quite general on the 1st, 14th and 15th.

## Precipitation, in Inches.

The precipitation averaged 2.78 inches, which is 0.05 below normal. The greatest monthly amount was 4.39 at Yorkville; the least was 1.20 at Conway. The greatest 24-hour fall was 2.06 at Stateburg on the 12th-13th. The average number of days with 0.01, or more, precipitation was 6, ranging from 1 at Allendale to 8 at Columbia, Little Mountain, Saluda and Trenton.

Sleet.—Columbia, 13th.

Snow.—Twenty-seven stations reported snow on the 13th, generally only a trace, but amounting to 2 inches at Batesburg. The snow melted as it fell.

Weather.—The average number of clear days was 17, of partly cloudy ones 6, and of cloudy ones 7.

Winds.—The prevailing direction of the wind was from the west at 17 stations, from the northwest at 10, from the southwest at 9, from the northeast at 7, from the north at 5, from the east at 2, and from the southeast at 1 station.

High Winds.—High winds, reaching velocities of 40 miles, or more, at many places, prevailed over the State on the 13th.

#### PROFITABLENESS OF COTTON RAISING.

It is the common opinion that the selling price of an agricultural product is alone the measure of its profitableness. Theoretically this is true, but in actual practice it is not wholly true, and in some instances is not even the most important factor, when productiveness is compared with crop prices.

By far the greater part of what the average farmer raises is for use and consumption on his farm, and the residue is the surplus on which alone the selling price has any effect so far as the farmer's finances are concerned. The case is different with the cotton farmer, for the entire production of this staple must be sold, and none can be profitably consumed on the farm, and yet a series of comparisons would indicate that the selling price of cotton is less important than the productiveness per acre, in calculating the profitableness of this crop.

The statement that more money is received for a small than for a large crop may be true, and yet the larger amount of money received for the smaller crop represents a loss to the cotton planter, in comparison with the smaller amount received for the larger crop. This view is less common, and it is based, of course, on the larger yield per acre of a large crop than a small one.

It may be assumed as an approximate fact, that the cost of cultivating an acre of cotton varies but little from year to year, far less than the price per pound or the yield per acre, and it may also be assumed to be constant in the same locality, however widely it may vary in different localities.

To illustrate all of the foregoing points, the value per acre has been calculated for the total cotton crop of South Carolina and Texas for a number of years, selected to represent the conditions briefly stated above. In 1878, the value per acre, in South Carolina was \$14.20; in Texas \$22.50; the price per pound was 11.2 cents. In 1894, the value for South Carolina was \$14.30, for Texas \$12.50, the price per pound 6.9 cents. In 1896 the values were for South Carolina \$15.90, for Texas 10.90, the price per pound 7.9 cents. In 1898, the year of greatest production for which values are available, the values were, for South Carolina \$11.00, for Texas \$13.80, the price per pound 5.9 cents.

The limits of this article will not permit a full discussion of the weather that prevailed, and the acreage cultivated, in connection with the amounts realized per acre, but it can be safely stated that the yield per acre is the controlling factor in the profitableness of raising cotton, rather than the price per pound. A large yield and high price would be the most profitable combination, but the rule of "supply and demand" asserts itself very quickly in such cases, operating on the variable factor, i. e., the price. The conclusion is that intensive farming will do more to make cotton raising profitable, than will varying the acreage from year to year in the hope of raising prices by limiting production, or of increasing the acreage to supply an existing deficiency at high prices. If the supply can be made fairly constant, the price will remain fairly constant. The effect of the weather on the growing crop is after all the main factor in the profitableness of raising cotton.

#### REMARKS BY OBSERVERS.

**BARKSDALE.**—The month was favorable for gathering crops, and for sowing small grain; cotton has about all been gathered. **BATESBURG.**—The month was very favorable for sowing grain, which was pushed, leaving but little more to be sown. There was a half hour snow flurry on the 13th, the snow melting as it fell. **BEAUFORT.**—The mean temperature was 2.8° below normal, accumulated deficiency since

January 1st is 532°. The precipitation was 1.94 inches above normal. Considerable oats and some fall truck were planted, with the weather favorable for both. **BOWMAN.**—There was very little rainy weather to retard farm work. Cotton nearly all gathered, fine yields—the best in many years. Some oats are up to good stands, sowing continues. Streams continue low. **CHERAW.**—From 1 to 1:30 p. m., of the 13th, snow fell, mixed with rain; the snow melted as it fell. **DUE WEST.**—Flurry of snow on the 13th. **HEATH SPRINGS.**—Fine weather prevailed during the month. All crops have been gathered, and the usual amount of small grain has been sown, and looks promising. **LIBERTY.**—Fine month for farm work, with sufficient moisture for ground to be prepared and planted to wheat and oats, which work was pushed, and some have come up in good condition. **LUGOFF.**—A large acreage of small grain is indicated, and some oats have been sown. Some cotton still to pick. All corn gathered, and the crop is good. Some hogs have been killed. **NEWBERRY.**—Cool month. Splendid weather for gathering crops, and nearly all cotton has been picked. **SOCIETY HILL.**—First killing frost on the 15th. Acreage in oats large, mostly planted with drill. Weather very fine for all farm work. **STATEBURG.**—Weather conditions quite favorable for the maturing and gathering of late fall crops, i. e., late corn, peas, sweet potatoes and hay. Very little cotton was damaged by the killing frost, and picking was practically completed at the close of the month. **TRENTON.**—Precipitation 0.50 inch less than normal, and is 17.52 inches less than the average for the first 11 months of the year.

#### MISCELLANEOUS PHENOMENA (with dates).

**Aurora.**—Santuc on the 21st.  
**Earthquake.**—Summerville, on the 15th at 12:22 a. m.  
**Thunderstorms.**—Summerville, 22nd; Charleston, 22nd.  
**Fogs, Dense.**—Charleston, 16, 20th; Liberty 5th.  
**Lunar Halos.**—Charleston, 20, 25th; Little Mountain, 2, 20, 26th; Santuc, 20–26th; Stateburg, 25th.  
**Solar Halos.**—Beaufort, 10th; Charleston, 1, 9, 10, 20, 26, 27, 29, 30th; Seivern 11th; Statesburg, 10, 29.

#### CORRECTIONS.

In the October 1904, Monthly Report, the following corrections should be made: On page 5, the mean temperature at Saluda 65.6°, should be 60.6°; at Santuc 58.7° should be 59.7°.

#### SUNSHINE RECORDS.

An automatic record of the amount of sunshine—the converse of the amount of cloudiness—is obtained by various instruments. Some employ a sphere of glass by which the sun's rays are focused on a curved sheet of paper at all hours of the day; others secure a photographic print of the track of a fine solar ray that falls through a minute aperture on sensitive paper. In all cases, even a faint cloudiness over the sun may be recognized by a weakening of the record, and heavy clouds covering the sun prevent any record being made. The hours of sunshine for a month, divided by the total number of day-time hours in the month, give an indication of the prevalence of clear or cloudy weather.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR DECEMBER, 1904.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

COLUMBIA, S. C.

VOL. VII. COLUMBIA, S. C., DECEMBER, 1904. No. 12.

## PROGRESS OF FARM WORK.

Without having had any severe cold waves, or unusually low temperatures, the month was colder than usual, especially in the western portions where, during a large portion of the time, the ground was frozen each morning, and where, during the middle of the month, the ground was covered with snow for several days. These conditions interfered with finishing the seeding of wheat and oats and the germination of that that was sown late in November, although prompt advantage was taken of the portion of the month that was suitable for sowing oats and wheat and considerable advance was made in this work.

In the central and eastern portions the weather was more favorable and seeding operations were finished. In these divisions, too, germination was favorable and oats are up to fair stands, although the stands are smaller than usual to the season.

The precipitation was less evenly distributed than in November, but was approximately normal for the whole State. That portion in the form of rain fell gently and slowly and was practically all absorbed by the soil as it fell, while that portion in the form of snow and sleet melted slowly and was also absorbed, so that the ground was kept thoroughly moist, and in many places wet, making the comparatively small amount of precipitation more efficient in supplying the soil with the greatly needed water, after the severe drought of the autumn, than heavier rains would have been.

The weather was fairly favorable on winter trucking interest along the coast except for a killing frost on the 13th that damaged the more tender varieties of vegetables severely.

There was little, if any, fall plowing done in preparation for spring planting, as the soil was not in condition except on dry uplands.

Streams continued exceptionally low, though rising slowly towards the close of the month.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for December, 1904, was 45.5°, which is 1.5° below normal. The highest local mean was 51.2° at Beaufort; the lowest was 49.1° at Greenville. The monthly extremes were a maximum of 78° at Seivern on the 24th, and at Cheraw on the 27th, and a minimum of 16° at Clemson College on the 19th and at Walhalla on the 29th, making the State range 62°. The greatest local range was 59° at Seivern, the least was 43° at Charleston. The mean of the daily maximum temperatures was 54.9°, and of the daily

minimum temperatures was 36.1°, making the average daily range 18.8°.

Killing Frost.—First of season not previously published—Charleston, 13th.

## Precipitation, in Inches.

The precipitation averaged 2.79 inches, which is 0.45 below normal. The greatest local amount was 4.90 at Greenville, the least was 1.08 at Charleston. The greatest 24-hour fall was 2.00 at Walhalla on the 4th. The average number of days with 0.01 inch, or more, of precipitation was 9, ranging from 3 at Allendale and Trial to 13 at Gaffney, Greenville and Newberry.

Sleet.—Sleet was reported from Beaufort, Cheraw, Darlington, Due West, Columbia, Trenton, Winnsboro, 15th; Blackville, 17th; Greenville, 12th; Heath Springs, Newberry, Summerville, 14th; Lugoff, 15-19th; Saluda, 12-14-15th; Santuc, 15-17th; Society Hill, 11-14th; Spartanburg, 11th.

Ice Coating.—Rain that froze as it fell, forming an ice coating, was noted as follows: Aiken, 13th; Batesburg, Clarks Hill, Columbia, Seivern, 15th; Beaufort, 26th; Cheraw, 12th.

Snow.—Snowfall of measureable amount was confined to the northwestern counties, with a maximum fall of 7.0 inches at Gaffney. The dates of snowfall were from the 14th to 17th. The snow melted quickly after the 17th.

Weather.—The average number of clear days was 14, of partly cloudy ones 5, and of cloudy ones 12.

Winds.—The prevailing direction of the wind was from the west at 20 stations, from the southwest at 11, from the northeast at 6, from the northwest at 4, from the north at 3, and from the east and south at 2 each.

High Winds.—Cheraw, Clarks Hill, Liberty, 28th; Columbia, 10-14-17-27-28th; Heath Springs, 27-28; Little Mountain, Lugoff, 28-29th; Newberry, 27th; Summerville, 5-17-27th.

## MISCELLANEOUS PHENOMENA (with dates).

Earthquake.—Summerville, 6th at 5:48 p. m.

Lunar Halos.—Charleston, 22, 23.

Solar Halos.—Charleston, 4, 9, 11, 24, 27, 28; Little Mountain, Stateburg, 11.

Thunderstorms.—Bowman, Lugoff, Stateburg, Summerville, Walterboro, 17; Newberry, Trenton, 27. Making 7 thunderstorms on 2 dates. Charleston also reported thunderstorms on the 5-6th.

Fogs, Dense.—Anderson, 3, 25; Beaufort, 2, 3, 26; Blackville 16; Charleston, 2, 4, 25, 26; Columbia, 2, 3, 4, 5, 10, 16, 17, 26; Gaffney, 26, 27; Greenville, 4, 10, 27; Liberty, 3, 4, 5, 7, 10, 16, 24, 25, 26, 27; Little Mountain, 10, 16; Lugoff, 27; Newberry, Santuc, 26; Stateburg, 7, 26; Yorkville, 3, 6, 9, 16, 26, 27.

## REMARKS BY OBSERVERS.

BEAUFORT.—The mean temperature was  $2.0^{\circ}$  above normal; precipitation 0.85 inch less. Accumulated deficiency in temperature since January 1, 1904, is  $529^{\circ}$ ; accumulated excess in precipitation since January 1, 1904, is 0.09 inches. The month was favorable for work on the truck farms. BOWMAN.—The precipitation was below normal for December. About an average small grain crop was planted, and is up to fairly good stands. Some scattered cotton yet to pick. HEATH SPRINGS.—The December temperature was about normal. Small grain crops look well. LIBERTY.—Owing to frequent rains there was no plowing done, and small grain seeding has not been finished. There was much cold, frosty weather. Wheat and other small grains look well, and the acreage is large. LUGOFF.—A large acreage was sown to oats, and it is up to good stands. Although the ground froze frequently, it did no material damage. NEWBERRY.—Cotton picking completed. Grain doing well. SALUDA.—There were many heavy frosts this month. SOCIETY HILL.—Oats and other small grains uninjured by frosts thus far. Temperature  $2.2^{\circ}$  above normal. STATEBURG.—From the 10th to 20th, steady but moderately low temperatures prevailed, with frosts every morning and generally with thin ice. A cold wave, accompanied by high winds, brought the coldest temperature of the season on the 29th with a minimum of  $25^{\circ}$ . Not much farm work done during the month. TRENTON.—Sleet and a hard freeze on the 15th did some damage to fruit trees. Precipitation 0.93 inch more than normal; the total for the year is 35.40 inches which is 16.65 inches below normal.

## PHENOLOGICAL OBSERVATIONS.

Records showing the time of leafing and blooming of trees and the ripening of their fruit, the time of beginning and ending of preparation of lands for the various crops, the time of planting, cultivation and fruitage, etc., for a long term of years have not been kept generally, and only rarely by individuals for their own pleasure or benefit. Perhaps orchardists have kept such records for the different kinds of fruit trees of which they made specialties; or experiment stations in testing varieties, but no department of the government has undertaken such a collection until early in 1904 the Weather Bureau made a beginning.

Realizing the extreme value of such records for a long series of years, Forms were prepared and issued through section directors, in which space was given for recording the first leaves, woods green, leaves coloring, and leaves falling, of forest trees, of early, medium and late varieties. The first leaves, first blooms, full bloom, period of harvest and character of yield of fruit trees, vines and shrubs. The beginning and ending of preparation of the soil, the beginning and ending of planting, special stage of development, and the period of harvest including the beginning and ending of the same and the quantity and quality of the yields of the principal staple crops, cereals, grasses, vegetables, etc.

These Forms were issued to selected voluntary observers throughout the whole United States. In this section, the selection was made from among those voluntary observers

whose known occupation takes them into the woods and afield. Much careful observation of the phenomena of nature is required in accurately making the called-for entries on these Forms.

One year's observation by itself, while extremely interesting, does not yield the full results that are hoped for from these phenological reports, although it does illustrate the march of the season from the southernmost parts of the country to its northernmost parts, as far as it relates to the preparation of lands and the planting of crops, in the spring, and the retrogression of the season in autumn, as shown by the times of ripening and harvesting, incidentally showing the shorter time required for the life history of the same crop in the northern portions. It will also help to define the zones, belts or regions of the various crops enumerated on the Forms, and may possibly help to encourage the cultivation of crops in regions where they are now unknown.

It will be, however, from a long series of these observations, made at each point by the same observer to eliminate the variations of personal judgment that might vitiate them for comparative purposes, that the greatest benefits are looked for. At present much stress is laid on the earliness or lateness of a given season, in the belief that it affects the ultimate yield or quality of the crops. These reports will help definitely to determine whether a season is or is not early or late in any given region, and in connection with the detailed records of the weather as now collected and published by the Weather Bureau, will assist materially to determine whether an early, an average or normal, or a late season results to the best advantage to the farmer, thus affording them, and all others interested, a possible forecast of the probable quantity and quality of the staple crops that may be expected at harvest time.

To him who loves to investigate the workings of natural laws as they are related to, and operate on the seasons and vegetation, these reports will be invaluable aids, irrespective of their commercial value, and if these reports will induce a closer and more minute observation of nature by, if not a majority of people, at least a large number, they will amply have repaid the labor of making, collecting and publishing them.

It is a matter of regret that there was not the interest taken in these phenological Forms that was hoped for, by all the selected voluntary observers in South Carolina, and only four out of the fourteen to whom blanks were sent returned them in completed form. Yet there was encouragement in the reports from some of the others who expressed their regrets, and promised to render better reports for the year 1905. Should any voluntary observers, other than those to whom blanks were sent last year, desire to engage in these observations they will be supplied with the necessary blank Forms, on application, which should be made during January or early in February so that the very earliest occurrences may be noted without recourse to memory.

A summary of the 1904 observations will be published in the January number of the Monthly Report.

CLIMATOLOGICAL DATA FOR THE MONTH OF DECEMBER, 1904.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.  
§ Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc.  
A Temperature apparently too high. B Temperature apparently too low. C Precipitation questionable and omitted.

STATIONS.

\* Probably erroneous, not used in means and summary.

(b) separation at 1.11, 1.11, and 2.2 min.
